Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Jaime Morris

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Laura Friedrichs

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Bryn Frederickson

Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Marti Mauntel

In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Laila Nabulsi  
1519 4th Ave

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Wendy DeGeorge

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Dan Popp

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Maryann Stevens

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Deborah Devers

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Amanda Larger

Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Tpdd Lipcsey

In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

John Zamos  
8224 Keating Ave

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Amy Hayworth

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Shirley Sassani

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Holly Ashworth

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Anthony Calvelage

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

D Arslani

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Pg Rossetti

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Stephen Peterangelo  
440 Claranna Ave  
OH 45419-1823

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

I live in Kentucky close o the Ohio River. Allowing the state of Kentucky--and all of the states along the river--the opt out of your established pollution control regulations will lead to a mass exodus from the Commission's excellent controls and certain degradation of drinking water supplies all along the river. As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Mari Delh

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Jeannie Jenny

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 1:51:46 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Amanda Brown

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 1:54:40 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Robert Myers

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 1:56:26 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Frederick Blosser

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 1:59:45 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Mary Virre

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 2:04:14 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Renee Hocevar

**Date:** Wednesday, March 20, 2019 2:09:56 PM

---

Dear Ohio River Valley Water Sanitation Commission,

Let's not make more problems for the Ohio community. Let's not move towards a third world country. Keep us healthy.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Stephen Bailey

Dear Ohio River Valley Water Sanitation Commission,

As a VERY DISGUSTED REGISTERED REPUBLICAN VOTER, I remember when President Nixon signed the EPA into law in 1970, stating that ALL USA surface waters shall be fishable and swimmable by 1983/4. It's 2019, and our rivers are still filthy!?!?! These will neither help nor protect people.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 2:14:13 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Gary Scoville

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 2:19:35 PM

---

Dear Ohio River Valley Water Sanitation Commission,

Our source of water in Cincinnati is the Ohio River. We have to have clean water in order to maintain our health. We also have a responsibility to the adults downriver to allow them to have clean water for their health and their children's and grandchildren's health. We need a comprehensive report.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Marjorie Schaim  
890 N Hill Ln  
Cincinnati, OH 45224

**Date:** Wednesday, March 20, 2019 2:19:37 PM

---

Dear Ohio River Valley Water Sanitation Commission,

Let's not allow "Flint" Michigan type fiascos to propagate up and down the Ohio River. The people demand and deserve the best possible water quality. That is the function of government...to serve the people. And this person wants strong protection of water standards, not lesser standards.

Thank you

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 2:23:40 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Elizabeth Davis

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 2:29:36 PM

---

Dear Ohio River Valley Water Sanitation Commission,

Protect our river and clean drinking water!  
Thanks

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

J Boothby

Dear Ohio River Valley Water Sanitation Commission,

I find it amazing that the head of the EPA just announced on national tv that dirty water is a larger threat than climate change. Must be because the EPA is out to make our water even dirtier by gutting the standards. Everyone deserves clean air and water. Stop being part of the problem. EPA was founded to protect the public, not corporations. Do your job for a change.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Dear Ohio River Valley Water Sanitation Commission,

Ohio's rivers are far from clean! 92 percent of all inland rivers in Ohio are deemed unsafe for recreation (according to the Ohio EPA). This is outrageous! It is irresponsible to suggest withdrawing pollution standards for a river that is ranked the most polluted in the United States!! Our children deserve to have swimmable waters! Do better! Elissa

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 2:34:31 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 2:40:39 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 2:53:39 PM

---

Dear Ohio River Valley Water Sanitation Commission,

The Ohio river is far too important to the people who live in the cities and towns along the river. What is asked here is important to the future river and must be addressed.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Paul Kuhn

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 3:03:04 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Barbara Dailey

Dear Ohio River Valley Water Sanitation Commission,

Please stop relaxing pollution controls ! Pollution is poison, toxic, and extremely detrimental to everything on Earth, including humanity ! It seems our governments and businesses are very bent towards continuing to destroy nature ; this is like burning the furniture to keep the house warm, and pretty soon we will start burning the walls ! IT MUST STOP !

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Dear Ohio River Valley Water Sanitation Commission,

We all have a right to clean, safe drinking water. The water supply needs to be protected vigorously to protect the public. Regulations must be driven by what's in the best interests of the health of the people of the Ohio river basin and not cater to the greed of wealthy and powerful corporations, businesses and individuals that may benefit economically by voiding all clean drinking water standards.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

Dear Ohio River Valley Water Sanitation Commission,

Why must citizens of this country push back against our regulators who try to fool us with language that allows you to not do your jobs of protecting our resources? Please behave like you have the public trust in mind!

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Anne Fry

Dear Ohio River Valley Water Sanitation Commission,

I kayak on the Ohio river and don't want to be in contact with contaminated water. I also drink (treated) water from the Ohio river and know full well that treatment is really aimed at pathogens and does little to reduce chemicals from manufacturing and agricultural waste. If anything, evidence of glyphosate in so many food products indicates that all water regulations need to be tightened rather than loosened.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 3:42:19 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Daniel Parr

Dear Ohio River Valley Water Sanitation Commission,

This planet and its rivers are under siege from many and varied sources. We must be strengthening our protections rather than weakening them. There is no going back, there is only prevention of even more devastating destruction of our lands, water and air.

I have been around for seven decades and I have seen the continuing degradation of our environment. The situation has become dire! It's visible and incredibly sad and really criminal what we have done. Please do your part to hold the line on further poisoning of our precious water.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. **Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 3:51:37 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Julia Radwany

Dear Ohio River Valley Water Sanitation Commission,

We need to safeguard our sources for drinking water. Please protect our rivers so that we can avoid the kind of PCB contamination that EXXON brought to the Hudson River. Even after decades of litigation and attempts to force EXXON to clean up its PCB waste in the Hudson, that river is still contaminated. The best policy is to avoid contamination in the first place and not be left holding the bag for this.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 3:59:15 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Michael Elefante

Dear Ohio River Valley Water Sanitation Commission,

Please protect our water sources! As an avid outdoorsman I frequently drink water from rivers and streams in the backcountry. I am able to filter or treat this water to protect myself from microbes, but I always wonder what kind of agricultural or industrial runoff are slipping through my filter. Please give me and my family piece of mind and protect one of our most precious resources.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 4:08:31 PM

---

Dear Ohio River Valley Water Sanitation Commission,

Water is life.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Diana Carter

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 4:09:07 PM

---

Dear Ohio River Valley Water Sanitation Commission,

As a resident of Ohio, and the broader natural world, I think it is imperative that we hold ourselves to high standards when it comes to polluting something as our water. I believe the current ORSANCO draft does not provide the right level of pollution control standards.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. **Date:** Wednesday, March 20, 2019 4:24:08 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Dear Ohio River Valley Water Sanitation Commission,

**POLLUTION CONTROLS MUST REMAIN MANDATORY IN EVERY STATE!!**

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

**Date:** Wednesday, March 20, 2019 4:52:04 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I grew up in the Ohio valley and feel very strongly about the health of this river!

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Mark Mendoza

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Rita Lethert

Dear Ohio River Valley Water Sanitation Commission,

I see the river as a source of under valued withdrawals by hydraulic fracking operations and the weakening of regulations for discharge. I am a registered voter in Steve Stivers congressional district and Rob Portman's state. I also vote down ballot on the state and local level. My vote counts!

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.
