The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Jean Tunstall

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Jen Kraemer

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Donald Wilson

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

I am writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

The Ohio River Valley Water Sanitation Commission's (ORSANCO) proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River. The Ohio River needs to be free from pollution.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

Apr 7, 2019

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Shane Henson

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Tracy Leinbaugh

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

John Cairns

In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Debbie Johnson

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Joseph Naidnur  
120 Windy Hill St N

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Allison Kelsey

Apr 7, 2019

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent and one who visits the Ohio River often for recreation, I wish to express my strong opposition to the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is absolutely the wrong -- and deadly -- choice for wildlife and public health. This approach jeopardizes the ongoing clean-up and restoration of the Ohio River and is completely counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, shamefully topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial -- and increasingly critical -- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly needs a collaborative approach.

The Commission must continue to uphold its responsibility to protect our waterways, communities and wildlife, and to ensure that all states work toward common goals and a cleaner Ohio River, which is what we all want and need. Thank you.

Thank you,

Apr 7, 2019

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

Dear Decision maker,

We cannot go back to the days before the Clean Water Act as well as the Clean Air Act. We saw what was happening with no or little controls on industry and municipalities. Raw sewage flowing directly into streams and rivers, all kinds of chemicals and even oil being dumped into our waterways. Swimming and fishing was prohibited in many waterways due to hazardous conditions. We Do NOT want to go back there. We have come so far already and must continue to maintain high standards or ALL creatures to exist in our environment. Even though I am a resident of Pennsylvania and a part of Pennsylvania is in the Ohio River basin I realize that this move to make it optional to have pollution control standards is risky and sets a precedent for all our country to say hey they are doing it we can too and we will shortly be back where we were before the laws were enacted to protect our drinking and recreating waterways. Therefore I endorse and agree with the below letter as written as well.

Sincerely,

John D Lahr  
699 Martic Heights Drive  
Pequea, PA 17565-9716

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Earl Grove

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

John Weber

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

This should not be an option! As an Ohio citizen, I have watched for years the abuses that have occurred which have created abhorrent health and environmental conditions, adversely affecting life, be it human or wildlife. You should not have the arbitrary ability to dismiss this compact.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Philip Strickland  
733 W Market St Apt 407

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Apr 7, 2019

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

I'm strongly opposed to the proposal that would make the Pollution Control Standards for discharges into the Ohio River optional. Stronger pollution abatement is badly needed, not an invitation for polluters to be irresponsible.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda.

Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

James Hofmann

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Dianne McCauley

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Roberta Bradach

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Elizabeth Garibaldi

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Sharon Wilson

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

As a constituent, I'm writing to express my strong objections regarding the ORANSCO proposal to make the Pollution Control Standards for discharges into the Ohio River OPTIONAL!

This approach jeopardizes the ongoing clean up and restoration of the Ohio River, as well as runs counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency. It is clearly the wrong choice for wildlife and public health.

Instead, I urge the Commission to continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

I appreciate your time and thoughtful consideration of this vital environmental issue.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Candie Glisson

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Anne Walker  
1107 Mulford St

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Jennie Storch

Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

Sad part of this plan and our political system today is most decisions involve special interest money instead of thinking about what needs to be done to protect the River Basin to make it be the best it can be for the communities and wildlife that depend on these waters for life and well being.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Apr 7, 2019

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional. Hardly any industry will voluntarily spend additional monies to keep rivers clean unless government makes it mandatory with a penalty for noncompliance.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Diane Allison

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ellen Yunker

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

If you please, with Trump dismissing clean air and water, you need to stand strong regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional. ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

William O'Brien  
472 Rittenhouse Blvd

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Amy Gross

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

These pollutants are not only toxic to the fish and wildlife along the Ohio River can travel downstream spreading the contaminants to the Mississippi River, and possibly to the Gulf of Mexico, affecting the seafood. It also has the potential to contaminate fields used to grow crops when the river overflows, affecting the entire food chain.

Thank you,

Kathleen Haas

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Victor Escobar

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Apr 8, 2019

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a person who is concerned about the environmental health of the Ohio River, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River. It is helpful to remember that about forty-five years ago another river in Ohio known as the Cuyahoga River was also extremely polluted--so much so that it even caught fire several times. However, the people living in that area and political officials became concerned enough to clean it up. Today, it is a much cleaner river due to both citizen and political concern. The same rehabilitation can also be applied to the Ohio River as well--and should. Please make the environmental rehabilitation of the Ohio River mandatory and make its clean-up a top and mandatory priority.

Thank you,

Dennis Wingle

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ronald Stoch

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Maggie Shipton

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Barbara Druga

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Jeff Smith

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Pamela Westgate

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Apr 8, 2019

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent and one who visits the Ohio River often for recreation, I wish to express my strong opposition to the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is absolutely the wrong -- and deadly -- choice for wildlife and public health. This approach jeopardizes the ongoing clean-up and restoration of the Ohio River and is completely counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, shamefully topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial -- and increasingly critical -- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly needs a collaborative approach.

The Commission must continue to uphold its responsibility to protect our waterways, communities and wildlife, and to ensure that all states work toward common goals and a cleaner Ohio River, which is what we all want and need. Thank you.

Thank you,

In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Becky Watson

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Ohio River Valley Water Sanitation Commission

Dear Water Sanitation Commission,

As a constituent, I'm writing to express my concerns regarding the proposal to make the Pollution Control Standards for discharges into the Ohio River optional.

ORSANCO's proposal is the wrong choice for wildlife and public health. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial--and increasingly critical--to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you,

Sue Ann Wells
