**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 5:39:35 PM

---

Dear Ohio River Valley Water Sanitation Commission,

We really must do a better job of protecting our waterways and the people who live near them. With climate change, clean water is going to be in short supply. We can and must do better.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

---

Dear Ohio River Valley Water Sanitation Commission,

I was also born and raised in a town next to the Ohio River (Parkersburg WV). Though I have moved away a long time ago, I still care about the well being and future of my birthplace. In an area historically plagued by different types of pollution, please take a step in the right direction with this standard rejection.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Dear Ohio River Valley Water Sanitation Commission,

With a small child at home, and with the recent water quality crises in Flint with lead, and in Dayton with PFAS, it's clear that what we need is a \*strengthening\* not a weakening of drinking water protections. Please act in the interests of citizens who depend on a clean healthy Ohio river.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

March 20, 2019

Submitted Regular Mail and Email to: [PCS@orsanco.org](mailto:PCS@orsanco.org)

ORSANCO  
5735 Kellogg Avenue  
Cincinnati, OH 45230  
Attn: PCS Comments

Re: AK Steel Corporation – Comments on the ORSANCO Pollution Control Standards, 2019 Revision

AK Steel Corporation (AK Steel) is pleased to submit comments on the Commission's latest proposed revisions to the ORSANCO Pollution Control Standards – 2015 Revision (the PCS). AK Steel commented in support of the Commission's prior PCS proposal in August 2018, as well as in response to the Commission's initial request for comments on this subject in February 2018. (Copies of those comments are attached for your reference.) Because of the continued importance of this issue and the effect of the PCS on AK Steel and numerous other businesses throughout the region, we submit these comments on the Commission's current proposal.

AK Steel continues to believe that substantial revisions to the PCS are needed to eliminate the unnecessary and duplicative burdens of the current regulatory scheme while still protecting the water quality goals of the ORSANCO Compact. When ORSANCO was created in 1948, there was a clear need for improvements in water quality in the Ohio River and a lack of any effective state or federal programs to achieve that goal. Since then, the enactment of the federal Clean Water Act and implementation of federally enforceable water quality programs in each of the Compact States have brought about dramatic progress in improving water quality in the Ohio River and achieving the goals of the ORSANCO Compact. The existence of those programs, which are effective and comprehensive, has substantially altered the role ORSANCO can and should play under the modern federal-state water quality regulatory regime.

In light of the dramatic improvements in water quality regulation that have occurred over the past 70 years and the realities of the current regulatory framework, AK has the following comments and recommendations regarding the Commission's current proposal:

**1. The Commission should eliminate the duplicative and unnecessary PCS**

AK Steel reiterates its support for the Commission's previous proposal, which would have largely removed ORSANCO from its duplicative role in water quality regulation and allowed it to focus on its longstanding and valuable role in gathering and evaluating scientific and technical information on water quality in the Ohio River. This approach recognizes that each of the Compact States now administers a robust, USEPA-approved NPDES permitting program under the Clean Water Act and is required to establish and enforce water quality standards that ensure the protection of the designated uses of the Ohio River and its tributaries. The ORSANCO PCS are not only duplicative and unnecessary; they create undue complexity and impose costly burdens and inefficiency on the Compact States and regulated businesses. And the proposed 2019 revision provides little or no change to these fundamental issues. ORSANCO should focus on helping to coordinate and promote consistency among the various States through its research and information-sharing functions and should eliminate the costly and unnecessary duplication embodied by the PCS.

**2. In the alternative, the Commission should acknowledge and make clear that the Compact States current NPDES permitting programs provide comparable use protection and achievement of the Compact's goals as provided by the PCS.**

If the Commission feels compelled to follow the approach embodied by its current proposal and to maintain the PCS largely unaltered, it should revise the proposal to clarify that:

- (i) The water quality standards and permitting provisions of each State's USEPA-approved NPDES permitting program are presumptively comparable to the water quality protections afforded by the PCS;
- (ii) Any NPDES permit issued pursuant to one of those USEPA-approved programs will be presumed to meet the goals and requirements of the ORSANCO Compact; and
- (iii) The burden of proof is on the Commission, after due notice, investigation and hearing, to demonstrate that any such NPDES does *not* provide comparable use protection and achievement of the Compact's goals as provided by the PCS, and that a permit applicant may challenge any such determination in a court of proper jurisdiction.

As currently drafted, the Commission's proposal will only create more confusion and uncertainty about both the role of ORSANCO in water quality regulation and when and how States and permittees must address and incorporate the PCS in permits for discharges to the Ohio River. Without the clarifications identified above, the proposal will merely increase the significant costs and inefficiencies associated with the PCS program, putting businesses along the Ohio River at a competitive disadvantage and creating a disincentive for further business investment within the Compact States.

AK Steel believes that the goals of the Commission's current proposal are laudatory, insofar as it appears intended to make the PCS more advisory in nature and to defer to the primary role of the States in regulating water quality. Unfortunately, the reality of the proposal seems to undermine that intent and, by maintaining the PCS in nearly unaltered form. AK Steel encourages the Commission to either return to its prior proposal – which recognizes that the PCS are no longer necessary in light of the comprehensive federal-state water quality regime established under the Clean Water Act – or revise its proposal to ensure that the PCS are only applied to override a State-issued NPDES permit if the Commission can demonstrate that such action is necessary to meet the requirements of the Compact.

**Basis and Additional Information for AK Steel Comments on ORSANCO's Current PCS Proposal**

The Commission's proposal appears to be intended to provide additional permitting flexibility to the States while recognizing the primacy of their NPDES permitting programs in protecting water quality in the Ohio River. As drafted, the proposal emphasizes that the PCS “were adopted by the Commission for *use or consideration* by signatory States as they develop and implement their programs to assure that those designated uses and other goals regarding pollution control and prevention set forth in the Compact will be achieved.” The new language added to Section 1.1 of the PCS goes on to recognize that the permitting and standards development processes in the individual States may vary, and that “each discharge permit issued pursuant to the Clean Water Act or other federal or state law may not contain requirements addressing one or more of the Pollution Control Standards.” In such a case, the proposal would require a State to implement permit limitations that provide “comparable” use protection and achievement of the goals of the Compact as would be provided by application of the PCS.

Although this new formulation suggests that the PCS would become advisory in nature (requiring each State to merely “consider” the PCS in establishing permit limitations in individual discharge permits), the overall structure and content of the PCS seem to undercut this conclusion. Rather than providing the desired flexibility, the proposed revisions threaten to maintain the existing rigid burdens and unnecessary duplication of the current PCS, while creating considerable new ambiguity and uncertainty concerning how ORSANCO will use its commenting and enforcement authorities under the Compact and the revised PCS to ensure that State-issued permits provide “comparable” use protections.

- The Commission's current proposal would maintain the existing, comprehensive provisions of the PCS

regarding water quality criteria (Chapter 3), mixing zone designations (Chapter 4), and wastewater discharge requirements (Chapter 5). Those provisions contain extensive, detailed, and prescriptive requirements that ORSANCO presumably deems necessary to protect and preserve the designated uses of the Ohio River and meet the other goals of the Compact. The continued existence of those detailed standards will likely have an inordinately presumptive or prescriptive effect on each State's determination of what permit terms are required to provide "comparable" use protections, as required by the revised PCS. Thus, while purportedly only requiring that States "consider" the detailed PCS, the effect is likely to be much more prescriptive.

- The revised PCS retain numerous requirements that are inconsistent with, and in some cases unnecessarily more stringent than, the water quality standards and implementation procedures adopted by the States and approved by USEPA pursuant to the Clean Water Act. ORSANCO also appears to be unnecessarily regulating numerous pollutants whose regulation is not necessary to ensure the achievement and maintenance of high quality water and aquatic values in the Ohio River. This suggests a desire to regulate as many pollutants as possible without regard for necessity or effectiveness. The possibility that ORSANCO will continue to insist on the implementation and enforcement of these provisions through its enforcement authority raises the specter that States will be forced to incorporate unnecessary and burdensome requirements in their NPDES permits that provide no demonstrable additional environmental benefit for the Ohio River.
- The current PCS proposal retains provisions for the issuance of variances from the mixing zone and wastewater discharge requirements of the PCS (Section 1.6) and for approval of alternative site-specific water quality criteria for specific constituents (Section 1.7). It is unclear why these variance and site-specific water quality criteria provisions are even needed if States are merely required to "consider" the PCS in issuing discharge permits. Maintaining provisions for approval of variances and site-specific criteria suggests that ORSANCO will continue to view the PCS as mandatory.
- The Commission's proposal contains conflicting signals regarding the continued role and applicability of the detailed water quality criteria set out in Chapter 3. On the one hand, the proposal deletes two provisions that *require* compliance with the water quality criteria. (See Sections 1.1 and 5.1.) On the other hand, the highly detailed and prescriptive water quality criteria have nevertheless been retained in their entirety, without alteration, in the current proposal. Moreover, portions of those water quality criteria are incorporated by reference in the wastewater discharge requirements for chemical constituents set forth in Section 5.3 of the revised PCS. Thus, while eliminating a few statements requiring compliance with the water quality criteria (and replacing them with a more generic reference to compliance with the goals of the Compact in Section 1.1), the existing, detailed water quality criteria remain a central component of the PCS and are likely to continue to play a major, if not determinative, role in setting discharge limitations in NPDES permits.
- Despite the suggestion that States must merely "consider" the PCS in establishing permit terms, the near-universal use of mandatory language throughout the PCS suggests otherwise. The ubiquitous use of the word "shall" throughout the PCS indicates that ORSANCO continues to view the water quality criteria, mixing zone provisions, and wastewater discharge requirements of the PCS to be mandatory, not merely advisory. If ORSANCO indeed intends otherwise, the mandatory language should be eliminated.
- The process for adoption and revision of the PCS, including individual water quality criteria and discharge requirements, continues to provide no opportunity for affected parties to challenge the appropriateness or applicability of the PCS. Regulated entities have no opportunity to challenge the basis or soundness of standards that may be applied within their NPDES permits. This lack of an opportunity to challenge these de facto legal standards is fundamentally unfair and deprives permittees of regulatory and legal due process.
- The Commission's authority under Article IX of the Compact to issue orders to *compel compliance* with the requirements of the Compact reinforces the concern that the unaltered PCS will be used to override State NPDES permitting decisions. Under the latest proposal, ORSANCO will be given the opportunity to review and comment on all permits for discharges to the main stem of the Ohio River. Thus, if ORSANCO determines that a proposed NPDES permit does not meet its standards (as embodied in the PCS), it may submit comments to that effect, and if the State regulatory authority does not alter the proposed permit, the Commission may issue an order compelling the

permittee to nevertheless comply with the PCS.

The clear result of this change will be greater uncertainty and inefficiency in the permitting process and increased costs for the regulated community who must decipher what the final terms of a proposed NPDES permit may be.

Out of an abundance of caution, States and permittees may be forced to propose permit terms that continue to fully incorporate the detailed requirements of the PCS – regardless of whether they are appropriate or necessary – rather than run the risk of additional delay, cost and uncertainty should ORSANCO decide that the State-proposed terms do not provide “comparable” use protection. Without substantial additional revisions as suggested herein, the proposed retention of the PCS in their current form will serve, in essence, as a mandatory baseline for all permits authorizing discharges into the Ohio River.

It is also noteworthy that Section XII.A.7 of ORSANCO’s By-Laws require the review of the PCS on a triennial basis. By maintaining the extensive, complex provisions of Chapters 3, 4, and 5 of the PCS, ORSANCO will be required to expend extensive time and staff resources every three years to review and update the PCS – despite the fact that they are purportedly advisory in nature and are not needed to protect the quality of the Ohio River. In a time of limited public budgets and numerous pressing demands, ORSANCO should not be expending precious resources on a task that duplicates the States’ own exhaustive triennial reviews under the Clean Water Act.

In sum, the PCS serve little effective purpose under the current, comprehensive water quality regulatory regime.

AK strongly recommends that the Commission return to its prior proposal. The Compact States are well equipped to ensure the protection of water quality in the Ohio River. And ORSANCO is well equipped to provide a complementary research and coordination role to help the States in fulfilling their responsibilities. In the alternative, if the Commission chooses to retain the detailed provisions of the PCS in their current form, it should explicitly state that the States’ USEPA-approved NPDES programs and the permits issued thereunder provide comparable protection of the designated uses of the Ohio River and achievement of the goals of the Compact as provided under the PCS. Thus, if the Commission seeks to force a Compact State to incorporate some or all of the PCS into any discharge permit, the burden of proof should be on the Commission to demonstrate that such changes are necessary to meet the explicit requirements of the Compact. This approach is clearly consistent with the language of the Compact itself, which recognizes that “no single standard for the treatment of sewage or industrial waste” is appropriate throughout the Ohio River basin. The PCS may have a legitimate continued role in the current legal climate, but that role should be to advise and inform, not to direct. The proposal should be revised to reflect this important distinction.

Thank you again for the opportunity to comment on the Commission’s proposed revisions to the ORSANCO PCS.

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Sandie Myers

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Leslie Switalski

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Joe Wolf

---

Dear Ohio River Valley Water Sanitation Commission,

When my family recently returned from a road trip through West Virginia, my son eagerly counted the miles until we reached the Ohio River. His excitement reminded me of the awe that I experienced in childhood when, after a long drive, we would finally come in sight of the wide water and cross the bridge toward home. That river is an important part of our heritage as Ohioians, and it also provides drinking water for 5 million people, as well as numerous economic and recreational opportunities. We should do everything we can to protect it.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. **Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 8:17:34 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Gregory Lovalenti

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 8:43:14 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Lisa Dian

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 9:08:51 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Mark Grubb

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 9:33:53 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Jo-Anne Harris

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 10:18:05 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Eric Czerwony

Dear Ohio River Valley Water Sanitation Commission,

I remember when the Mahoning River in Youngstown was on fire from all the chemicals dumped in to it from all the industrial plants. It's been a struggle to pass laws to clean up and protect our life sustaining rivers and waterways. We must not go backwards! Every living thing deserves clean water!

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. **Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 10:53:52 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Paul Brinkdopke

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 20, 2019 11:32:05 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Judy Vershum

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Thursday, March 21, 2019 12:35:26 AM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Christina Angelo

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Thursday, March 21, 2019 6:25:10 AM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Karen Ferren

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Thursday, March 21, 2019 7:56:04 AM

---

Dear Ohio River Valley Water Sanitation Commission,

Water is Life!

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Kathleen Hofmann

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

**Date:** Thursday, March 21, 2019 8:47:58 AM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. Dear Ohio River Valley Water Sanitation Commission,

The Ohio River is the largest single source of my community's drinking water. Take a long term stewardship role in your decision making.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Ron Schofield

Dear Ohio River Valley Water Sanitation Commission,

What you Fools are trying to do will take the Ohio River back to what it USED to be like and thaqt was an OPEN WASTE DUMP! I have LIVED in the Ohio Valley ALL of MY lifw and I REMEMBER what it WAS LIKE BEFORE the EPA. You CERTAINLY DID NOT EVEN THINK about swimming, skiing or fishing in the open wste dump that it was. NOW that it FINALLY getting BETTER YOU GREEDY ASSHOLES are talking about removing the protections that have FINALLY STARTED to REPAIR the DAMAGE that was caused by the UNREGULATED dumping of the waste products of the factories that line the Ohio Valley. This is undoubtedly because the JERKS that want to do this DO NOT LIVE HERE and DO NOT have to WORRY about the POLLUTION caused by THEIR COMPANIES because THEY DO NOT LIVE HERE! Maybe they should have these things dumped in THEIR BACK YARDS and see how much they like it?

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Thursday, March 21, 2019 10:52:00 AM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Lisa Bozsoki

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Thursday, March 21, 2019 11:57:41 AM

---

Dear Ohio River Valley Water Sanitation Commission,

It is time to wake up !!!

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Terrell Mundhenk

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Thursday, March 21, 2019 2:49:08 PM

---

Dear Ohio River Valley Water Sanitation Commission,

Keep this river clean....it is my heritage!!!

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Bonnie Staten

**Date:** Thursday, March 21, 2019 4:53:33 PM

---

Dear Ohio River Valley Water Sanitation Commission,

The safety of our drinking water is a paramount concern. We should have learned this from the disaster in Michigan, if common sense did not tell us before. Saving some businesses money is not more important than our children's health.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Valentina Khoury

Dear Ohio River Valley Water Sanitation Commission,

Water is an indispensable resource. To put the Ohio River at risk by eliminating essential pollution control standards is unacceptable.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Friday, March 22, 2019 5:07:58 AM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Kim evans

**Date:** Friday, March 22, 2019 1:44:59 PM

---

Dear Ohio River Valley Water Sanitation Commission,

Water is not a negotiable privilege. Orsanco was created with great effort to help improve quality of life by careful monitoring of the region through which the Ohio River flows. Our city depends on this watershed for drinking water, which should always come first. If it is an "inconvenience" to those in charge of ORSANCO, they should not be in charge of policy regarding pollution controls. Water is a necessity of life, not a business expense. Water quality comes first.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. **Subject:** Reject Draft Pollution Control Standards  
**Date:** Friday, March 22, 2019 2:32:10 PM

---

Dear Ohio River Valley Water Sanitation Commission,

The Ohio River is already the most polluted body of water in the United States -- and you want to allow even more pollution?? Not on my watch.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

**Date:** Friday, March 22, 2019 8:21:21 PM

---

Dear Ohio River Valley Water Sanitation Commission,

After better than a half century of work to clean up the Ohio River PCS is a blatant attempt to water the pollution controls that have been put in place over the last 60 years. Such a watering down the controls now in place return the river to the same condition that ORSANCO was created to combat waking the Ohio River unfit as a source for drinking for the cities along it's banks including Pittsburgh, Marietta, Steubenville, Portsmouth, Cincinnati and many other cities in Kentucky, Indiana and Illinois. After over a half century PCS would return the Ohio River to the open sewer that it was before the foundation of ORSANCO.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. **Date:** Friday, March 22, 2019 11:16:28 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Patsy Deerhake

Dear Ohio River Valley Water Sanitation Commission,

Growing up in Ohio, I always used to boat and swim in the Ohio river. Most of my family lives right there in Martins Ferry. I have so many amazing memories there and I'd hate for the river to be destroyed yet again due to pollution.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. **Subject:** Reject Draft Pollution Control Standards  
**Date:** Saturday, March 23, 2019 1:09:29 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

June Nelson

Dear Ohio River Valley Water Sanitation Commission,

It is time everyone on this board does their job and PROTECT our precious waterways from industrial manufacturing and agriculture pollution. Clean, healthy water is NOT an infinite resource and everyone to include wildlife must have this resource to survive. Don't let the few people who will profit from your lack of concern and/or doing the job you have been charged with doing influence what you do moving forward.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

---

Dear Ohio River Valley Water Sanitation Commission,

The Ohio River is already consistently rated the dirtiest river in the United States. If we do not keep the current standard in place what will happen then. Also there are substantial new projects in place that will have the potential of threatening our drinking water even more. We will have no recourse to hold industry accountable if ORSANCO does not remain intake and available to keep a watchful eye on the industries that already pollute and make us pay to clean up after them. But maybe that is the plan? Maybe that is why ORSANCO is trying to change so that they can allow that to happen? Industry will get a free pass? These standards must remain in order to protect our drinking water and so that we will not lose the progress we have made trying to clean up the Ohio River. We can not go backwards. Industry must be held accountable. We already have to pay for special filters to clean up their mess. What will happen if standards go away?

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

**Date:** Sunday, March 24, 2019 2:59:44 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Gail Meese

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Monday, March 25, 2019 8:02:08 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Charles and Carol Glaser

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Wednesday, March 27, 2019 7:10:02 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Lindsay Green

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Sunday, March 31, 2019 1:24:12 PM

---

Dear Ohio River Valley Water Sanitation Commission,

Maintenance of high water sanitation standards is critically important to millions of residents and citizens of every state bordering the Ohio River and many more downstream. We must remember, we all live downstream!

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

David Collins

Dear Ohio River Valley Water Sanitation Commission,

I am very concerned for the river's recovery. Two-thirds of our state drain into the Ohio River, it deserves as much protection and attention as Lake Erie. The Ohio River is the most biologically diverse river in the United States. There are more than 250 professional fishing tournaments on the Ohio River each year between Pittsburgh and Cincinnati. Please ensure that Ohio River states are required to adopt all of ORSANCO's pollution control standards.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Dear Ohio River Valley Water Sanitation Commission,

We must protect our water sources with strong, enforced pollution control standards, not only for us now but for our children and grandchildren, and great grandchildren. We must not put economic benefits above the value of our health and that of our ecosystem. This is a moral issue: Do not kill; Love thy neighbor. Do not succumb to greed--for riches, power, influence. Only love endures. Making it easier for industries to pollute our river is NOT love!

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. Dear Ohio River Valley Water Sanitation Commission,

Though a member of Indiana, what happens in the Ohio River certainly impacts water in Indiana as well. As a member of a state that shares the water of the Ohio River, I am requesting to keep the pollution control standards in place, or even increase them. We cannot afford to go backward we cannot afford to lower them.

Thank you for your time,

-Daryl

**Subject:** Reject Draft Pollution Control Standards  
**Date:** Saturday, April 06, 2019 12:44:38 PM

---

Dear Ohio River Valley Water Sanitation Commission,

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. States should be allowed to deviate from the standards only with supporting scientific reasoning and a fully transparent public participation process including public hearings.

ORSANCO should produce a report to the public every three years with an analysis of compact states' PCS, including a comparison with ORSANCO's PCS. The Commission should continue its evaluation every three years of the PCS standards with fully transparent public participation. Lastly, ORSANCO should continue to evaluate NPDES permits issued by the states and develop an annual report to summarize the findings that are available to the public.

We all deserve clean water.

Sincerely,

Janet Gooch

Dear Ohio River Valley Water Sanitation Commission,

I oppose the ORSANCO's current proposal to make their Pollution Control Standards (PCS) voluntary for the states in the compact. Doing this will put our health and that of our ecosystem at risk as industries pressure states for weak standards. Also, the discharged pollutants of a state with weak standards will affect all the states downstream. We also need the ORSANCO mandatory standards because there are many that are stronger than EPA standards and some that the EPA does not even address. In addition, the federal government is weakening the EPA and Clean Water Act regulations more and more so we cannot count on these to protect our waterways.

ORSANCO must allow states to deviate from their PCS only for strong scientific reasons which must be made public through hearings and a fully transparent process.

ORSANCO must continue to scrutinize discharge permits issued by the states, issue annual public reports of its findings, and publicly review its PCS every three years.

I am opposed to the current draft of the Pollution Control Standards (PCS) released for public comment on March 1 by the Ohio River Valley Water Sanitation Commission (ORSANCO). Making the adoption of pollution controls voluntary for states will eliminate accountability and put our health at risk.

Any future PCS proposals should require state adoption in the interest of protecting the drinking water supply of 5 million people and recovering Ohio River ecosystems. ORSANCO Commissioners  
ORSANCO

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Sincerely,

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Sincerely,  
Timothy Simmons

Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Dear ORSANCO Commissioners,

With the Ohio Valley petrochemical industry about to come online this is no time to reduce control over pollution in the Ohio River basin. States, competing with one another for new industry, will certainly elect to reduce pollution standards. In my opinion monitoring should increase and standards must be uniform and mandatory.

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Dear ORSANCO Commissioners,

I understand that ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin for over 70 years. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threatens to unravel decades of work to improve the health of the Ohio River.

Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states. There could be interstate conflict.

River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

I join thousands of Americans who are concerned with the health of the Ohio River. Please take our concerns into consideration in setting uniform pollution control standards.

Sincerely,

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Knowing how business operates in the U. S. today, having voluntary compliance is identical to having NO compliance. A great river flowing without cost to the user is more temptation than profit driven businesses can resist. The pressure is on and the fix is in. The need is for uniform rules and certain enforcement. It's that simple!

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Sincerely,

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Dear ORSANCO Commissioners,

As an engineer with decades of professional experience addressing air quality issues in my native Canada, 30 years in California and now for the last 20 years as a concerned Citizen in West Virginia, my professional opinion is that it is unacceptable to allow any pollution in the air or water resources which are absolutely critical to the function of life of all species and vegetation.

Our planet is under serious threat from climate change, which requires an entirely new paradigm of thinking about any and all pollution.

ZERO emissions should now be the eventual goal of responsible regulations.

I applaud and join with the WV Rivers Coalition in requiring the ORSANCO to continue, tighten and enforce pollution regulations to protect the magnificent Ohio River.

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Sincerely,  
Ann Knott

River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Please make the water standards MANDATORY for the entire Ohio River basin. If there are weaker standards in a state upstream, then the water quality is jeopardized in states that are downstream. For this reason, the water standards for the Ohio River should be mandatory for all of the eight (8) states in the Ohio River basin.

Thank you for this opportunity to comment.

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

I am writing to urge you in the strongest possible terms to require compliance to the standards ORANSCO has set, and to further tighten the Uniform Pollution Control Standards for the Ohio River.

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Again, I urge you to require compliance to the standards ORANSCO has set, and to further tighten the Uniform Pollution Control Standards for the Ohio River.

Thank you for this opportunity to comment.

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Sincerely,  
Beverly Flores

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Sincerely,

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Like many others who commented on ORSANCO's proposal to stop setting uniform water pollution standards for the Ohio River, I am pleased that you chose to continue setting standards. However, I'm informed that you are proposing to make the standards voluntary. I'm guessing this idea comes from the same place as the earlier proposal: pressure from politicians probably, themselves motivated by pressure from lobbyists and campaign contributors.

It's perfectly clear that making the standards voluntary would remove any point in setting standards. There may be some ORSANCO states that would choose to make a priority of protecting the health and safety of their citizens, and of other life in and around the river--I'm certain that my state (WV) is not one of them. In fact as you likely know, the WV legislature recently voted not to allow updated standards for our water, after being lobbied by the WV Manufacturers' Association--using the excuse that since WV citizens tend to be heavier than average and drink less water, it won't hurt us to have dirtier water. Likely lobbyists in your other states don't feel free to speak in such language--but they can quite possibly see to it that standards are set to the convenience of polluters, not the needs of children and others. Yes, each state has its DEP or DEQ, but we know from long experience that these are captured agencies.

Please continue to set standards--mandatory ones

Thank you for this opportunity to comment.

Sincerely,  
Mary Wildfire

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

I thank ORSANCO for setting uniform pollution control standards for the Ohio River. These standards must be enforced by all states. Voluntary adoption of the standards by states is not an option. The Ohio River must be maintained and improved to be as clean as possible.

As a retired PhD industrial chemist with over 30yr of experience, I had to account for all products from my reactions. One thing that I learned was; It is easiest to control a pollutant in a concentrated form in the plant. It is nearly impossible to remove the pollutant once it is dispersed in the environment. The old saying from the 60's that "dilution of pollution is no solution" is very valid.

I grew up in San Pedro, the port of Los Angeles. Fortunately we had a sea breeze that swept most of the LA smog away. I remember disliking trips into downtown LA because of the smog and air pollution. While I was studying chemistry at Caltech, I remember going into a lab at 1 o'clock. At that time the air was clear enough to see several blocks. When I came out of the lab at four, I would be lucky to see the stop light a half block away. The smog was that bad. One freshman student from back East, after he had been on campus for a week, asked, "Where did those mountains come from?". Although the Pasadena Hills are only a couple of miles away, the smog had been so bad for a week he had not seen them.

Driving on the LA freeways a few years later my eyes were watering so badly that I questioned whether it was safe to continue driving. It was worse than driving into Parkersburg after the Ames fire had burned for five days when I did turn around.

I followed the research on smog and was immensely pleased as the processes were understood and controls implemented so that today it is possible to live in LA.

Then the ozone hole was detected. A chemical understanding developed that fluorocarbons were the cause. Regulations were implemented and the ozone hole is disappearing.

In the 70s I used to drive along the Naugatuck River in Connecticut. When I first started, the color of the river varied from red, yellow, green, or brown and nothing grew on the banks. When I left the colors were gone and grass and trees were growing on the banks of the river.

These are three examples where we have successfully remediated human caused pollution. It has been done and we can do it again.

I had polio when I was four and a half and walked with braces and crutches ever since. As a freshman at Caltech I explained to the coach, "My legs are paralyzed, I have no kick, my left arm isn't very strong, and I want to be on the swim team. I can change in the locker room, walk with my braces and crutches to the pool deck, take off my braces on a bench, and crawl into the pool." His response was, "Lets see what you can do." I was on the swimming and water polo teams.

In graduate school my wife to-be and I learned to flat water canoe. In New Jersey and Connecticut we paddled with

the Appalachian Mountain Club on flat water and Class II white water. West Virginia Wild Water introduced us to class III kayaking. On first white water trip we camped in a grassy field and launched into a calm pool at the start.

Later I realized I was living the the 23rd Psalm. (“The Lord is my shepherd, I shall not want. He makes me lie down in green pastures, He leads me beside quiet waters, He restores my soul.”) Through the kindness of people I was able to function, we camped in a green field, and we started the trips in still water. Every time I paddle, I come back with my soul restored!

In a canoe or kayak, I have the same mobility as anyone. Once paddling with our young sons, we came across a river beaver. The beaver surfaced, swam in a circle, saw our canoes, flapped his tail, and dived. He did this three times. It was one of my greatest moments as a father — to share this with my family.

Today I am ashamed to have to testify about what should be an obvious truth. I am ashamed of our political process. I am ashamed of our school system that hasn’t taught us how to think. I am ashamed of myself for not taking a much more active role and letting others do the hard work.

I am especially ashamed of West Virginia. As an extractive economy, it’s environmental record is not very good. There is an old saying, “Fool me once shame on you, fool me twice shame on me.” First West Virginia sold its extensive lumber resources, and suffered erosion and flooding from the denuded mountains. Then West Virginia sold its coal rights to absentee landlords, and the mountain tops are being removed. And now Donald Trump is trying to sell control of West Virginia’s natural gas to China, a foreign country. What comes after fool me thrice? Voluntary adoption by states of the ORSANCO control standards?

Thank you for your past work. Now I ask you to make sure that everyone, including future generations, is able to go outside, see the Ohio and find, “He restores my soul.”

Sincerely,  
Warren Peascoe

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Sincerely,

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

Optional adoption of ORSANCO's uniform pollution control standard threaten to unravel decades of work to improve the health of the Ohio River. Please consider the following points when considering the future of ORSANCO's Pollution Control Standards:

1. Without uniform implementation of pollution control standards there will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
3. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. River users should be able to count on ORSANCO to set and enforce uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

RE: Set and Enforce Uniform Pollution Control Standards for the Ohio River

Dear ORSANCO Commissioners,

Cleaner water will help secure a better future for West Virginians and the other populations that live along the Ohio River! Enforce strong water pollution control standards to insure a future where the Ohio is more than just a channel carrying polluted water.

Since 1948 ORSANCO has set pollution control standards for the Ohio River to help improve the water quality of the river and provide critical guidance to the eight states within the basin. Please continue your responsibility of setting uniform pollution control standards and improve ways to hold states accountable to their implementation and enforcement.

4/5/2019

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,

Patricia Wiley

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,

Jane Ellison

4/5/2019

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,

Mary Igoe Meyers

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,

Sharon Daskal  
2258 Orchard Way

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,

Daniel Leming

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,

Bhavan Patel

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,

J M

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,

Ann Pelzer

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,

Julie Voynovich

4/7/2019

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,

Liliana fiorini

Dear ORSANCO,

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

I urge you to oppose the Ohio River Valley Water Sanitation Commission (ORSANCO) proposal to make water pollution control standards voluntary, because I value these standards that protect the drinking water of over 5 million people. Making the standards voluntary eliminates accountability and risks our water quality across the Ohio River Valley.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack, and following these parameters should be mandatory. ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place and be adhered to, to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

I demand that ORSANCO's pollution control standards remain mandatory!

Sincerely,
