Clear Creek****ALL SPECIES****ALL****5**Confluence to
Lawrence Co.

** This listing is based on limited data. It should be noted that fish migrate. Fish not sampled from these waters may migrate from the confluence of Clear Creek and Salt Creek, 1.3 miles south. Those water bodies have No Consumption advisories. Future sampling of the Salt Creek tailwaters below the Monroe Reservoir Dam is planned for more comprehensive results.

** Fish tissue samples have not been taken from Walnut Fork. However, fish tissue samples taken from Little Sugar Creek (Montgomery Co.) and Sugar Creek (Montgomery Co., I-74 to SR-32) are at No Consumption advisory levels. These two bodies of water are connected by Walnut Fork in Montgomery Co., approximately one river mile in length. Based on these data, a No Consumption advisory will be placed on Walnut Fork to protect human health. Future sampling of Walnut Fork is planned for more comprehensive results.

2004 Ohio Sport Fish Consumption Advisory - Limit Meals

Limit Your Meals From These Waters

The following table lists waterbody areas in which one or more species of fish are contaminated.

- Fish with low levels of contaminants are safe to eat, provided the **trimming, cooking** and meal frequency advice is followed. The maximum recommended frequencies for eating those fish are included in the table below.
- Fish with high levels of contaminants should not be eaten. The maximum recommended frequency for eating those fish is identified in the table below as **Do Not Eat**. A table listing only the "Do Not Eat" fish is available [here](#).
- In addition to the waterbodies in the table below, there is a **statewide advisory to eat no more than one meal per week** of any sport fish caught from any waterbody in Ohio.

How To Use This Advisory Table

Column 1	Column 2	Column 3	Column 4	Column 5
Body of Water	Area Under Advisory	Species	One meal per	Contaminant
Nemo River	U.S. Route 71 to Xeno River	Halibut 20" and over	2 Months	Mercury
		Halibut under 20"	Month	Mercury

- In **columns 1 and 2**, find the body of water and location in which you are fishing.
- In **column 3**, find the kind of fish you have caught. If a length is noted, measure the fish from the tip of the nose to the end of the tail fin. See pictures of many **common Ohio sport fish**.
- In **column 4**, find the maximum recommended meal frequency for the size and type of fish. One meal per week (52 meals per year), one meal per month (12 meals per year) and one meal every two months (six meals per year) is advice for how long to wait before eating your next meal of sport fish.
- In **column 5**, find the contaminant causing the advisory.

Advisory Table

Scroll down to go directly to the advisory table organized alphabetically by waterbody name, or

Click on a letter to go directly to waterbodies beginning with that letter, or

2004 Ohio Sport Fish Consumption Advisory - Limit Meals

Limit Your Meals From These Waters

The following table lists waterbody areas in which one or more species of fish are contaminated.

- Fish with low levels of contaminants are safe to eat, provided the **trimming, cooking** and meal frequency advice is followed. The maximum recommended frequencies for eating those fish are included in the table below.
- Fish with high levels of contaminants should not be eaten. The maximum recommended frequency for eating those fish is identified in the table below as **Do Not Eat**. A table listing only the "Do Not Eat" fish is available **here**.
- In addition to the waterbodies in the table below, there is a **statewide advisory to eat no more than one meal per week** of any sport fish caught from any waterbody in Ohio.

How To Use This Advisory Table

Column 1	Column 2	Column 3	Column 4	Column 5
Body of Water	Area Under Advisory	Species	One meal per	Contaminant
Nemo River	U.S. Route 71 to Xeno River	Halibut 20" and over	2 Months	Mercury
		Halibut under 20"	Month	Mercury

- In **columns 1 and 2**, find the body of water and location in which you are fishing.
- In **column 3**, find the kind of fish you have caught. If a length is noted, measure the fish from the tip of the nose to the end of the tail fin. See pictures of many **common Ohio sport fish**.
- In **column 4**, find the maximum recommended meal frequency for the size and type of fish. One meal per week (52 meals per year), one meal per month (12 meals per year) and one meal every two months (six meals per year) is advice for how long to wait before eating your next meal of sport fish.
- In **column 5**, find the contaminant causing the advisory.

Advisory Table

Scroll down to go directly to the advisory table organized alphabetically by waterbody name, or

Click on a letter to go directly to waterbodies beginning with that letter, or
