SUBJECT: Quality Update -August 2013 Conditions

## Flows

Average flows at seven Ohio River locations are displayed below. At each location the August 2013 average flow (black bar) is contrasted with the long-term average monthly flow (gray bar). The average flow for August 2013 is above the long-term monthly flow at every location.

## Bacteria

The bacteria monitoring results from six Ohio River locations in August 2013 are in the attached graphs. Beginning with the 2013 Contact Recreation season (April through October), there are thirteen sites being sampled. ORSANCO's water quality criteria for the protection of human health during the contact recreation season are:

- E. coli count is not to exceed $240 \mathrm{CFU} / 100 \mathrm{~mL}$ in more than 25 percent of samples. (E.coli is shown with a red line on the graph.)
- E. coli shall not exceed $130 \mathrm{CFU} / 100 \mathrm{~mL}$ as a 90 -day geometric mean, based on not less than five samples per month.

ORSANCO's water quality criteria for the protection of public water supply year round are:

- Fecal Coliform shall not exceed $2,000 / 100 \mathrm{~mL}$ as a monthly geometric mean based on not less than five samples per month.

## Pittsburgh

No data for September is available due to ALCOSAN having boat engine issues.

## Wheeling

In Wheeling, ORM 86.8 did not exceed the E.coli criteria. ORM 92.8 had three individual exceedances for E.coli. The 90 day geometric mean for E.coli was exceeded at ORM 92.8.

## Huntington

In Huntington, ORM 305.1 and ORM 314.8 had one individual exceedance for E.coli. The 90 day geometric mean for $E$.coli was not exceeded at either site.

## Cincinnati

In Cincinnati, ORM 462.6, ORM 470.0 and ORM 477.5 did not exceed the E.coli criteria. The 90 day geometric mean for E.coli was exceeded at ORM 477.5.

## Louisville

In Louisville, ORM 594.0 and ORM 619.3 did not exceed the E.coli criteria. The 90 day geometric mean for E.coli was not exceeded at either site.

## Evansville

In Evansville, ORM 791.5 and ORM 793.7 did not exceed the E.coli criteria. The 90 day geometric mean for E.coli was exceeded at ORM 793.7.

## Dissolved Oxygen and Temperature

A summary of the dissolved oxygen and temperature readings collected in August 2013 are displayed in the attached tables. During the months of May through October, ORSANCO interrogates nine stations for dissolved oxygen (D.O.) and temperature data once per day, Monday through Friday, for the previous 24-hour period. This data is compiled in-house to produce a report showing the minimum, maximum and average of the acquired D.O. and temperature readings. ORSANCO's water quality criteria for the protection of warm water aquatic life habitat are:

- The minimum D.O. concentration shall not be less than $4.0 \mathrm{mg} / \mathrm{L}$ at any time.
- Average D.O. concentration shall be at least $5.0 \mathrm{mg} / \mathrm{L}$ for each calendar day.
- During the April 15 - June 15 spawning season, a minimum D.O. concentration of 5.0 $\mathrm{mg} / \mathrm{L}$ shall be maintained at all times.
- The temperature period average for August $1-31$ is $84^{\circ} \mathrm{F}$ and the maximum is $89^{\circ} \mathrm{F}$.

There were no D.O. criteria violations or period average temperature violations for the month of August.
