

Original Proposal

- Two Additional BAFs: \$54,800
- One Mid River, One Lower River

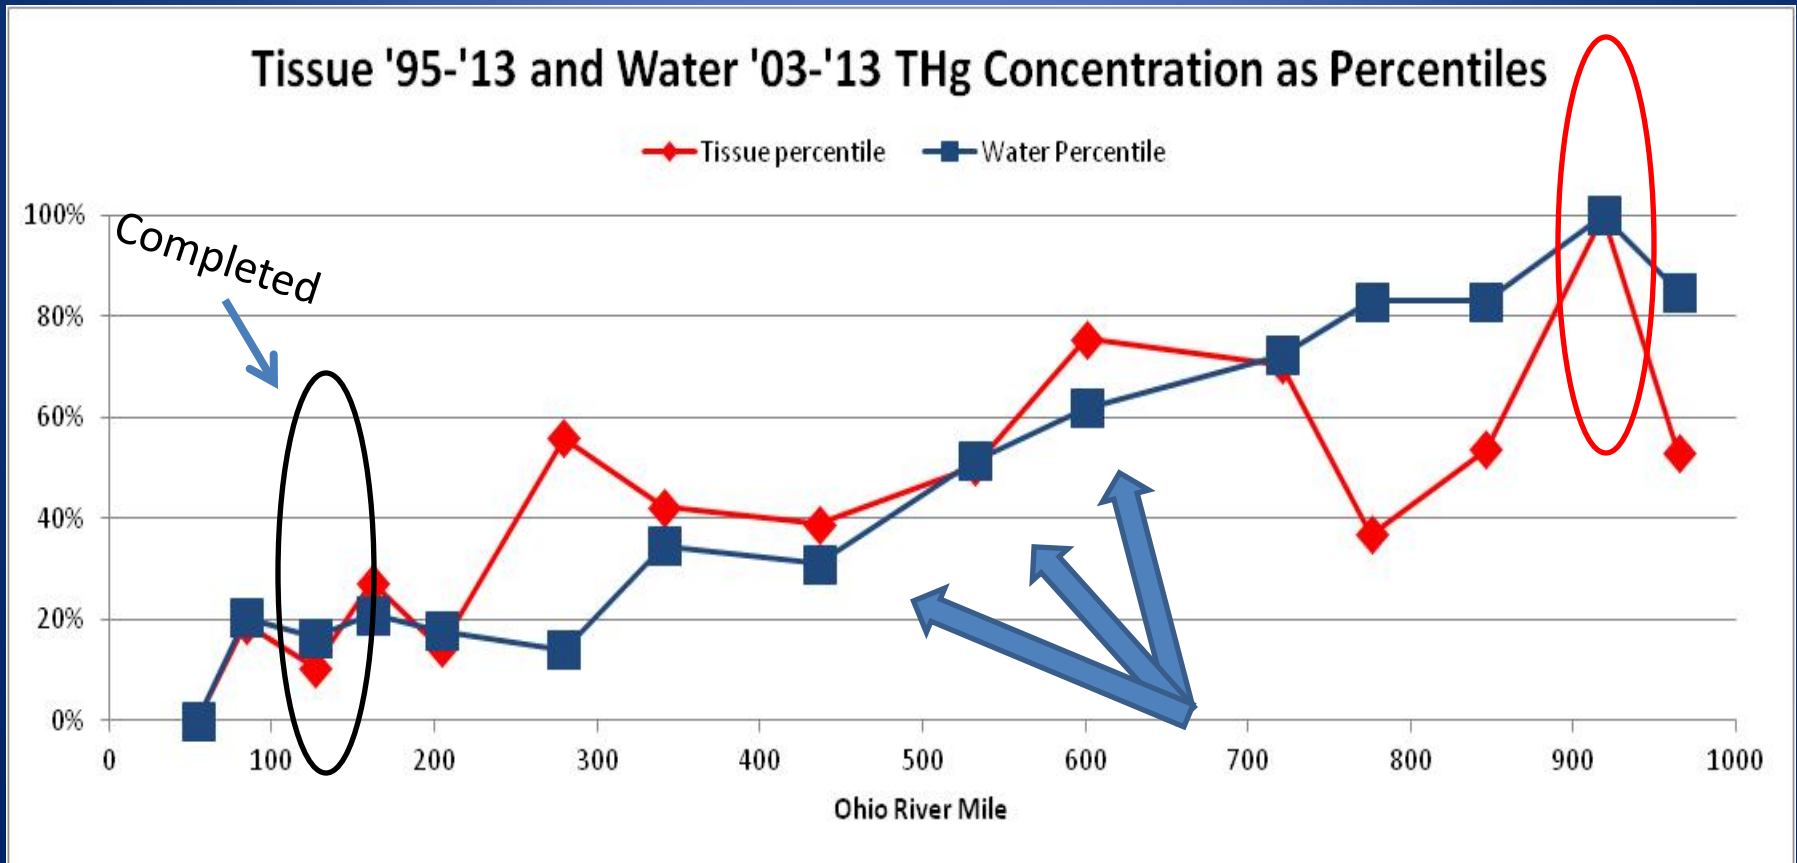

Geometric Mean THg Concentrations in Water '01-'13
and Tissue '95-'13 by Pool 2001-2013

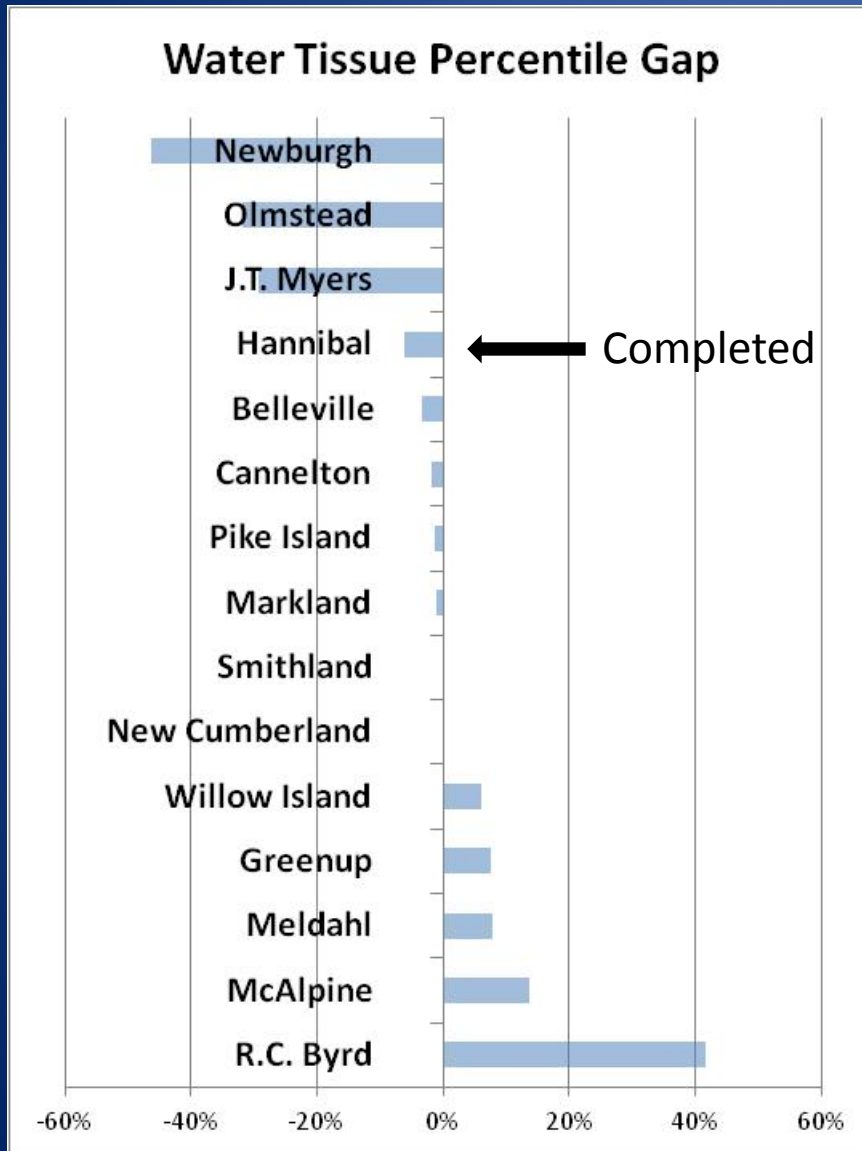

Tissue and Water Concentration Percentiles

(This view makes the lines relative to each other)

- Specific Site Recommendations
 - Smithland: Highest Hg in water and tissue
 - Need Tech input on Mid River Site Selection

Expected BAF Results

- Newburgh: $\downarrow C_T / \uparrow C_W = \downarrow \text{BAF}$ and high “critical value”
- This Slide Tissue restricted ‘95-’13
- R.C. Byrd: $\uparrow C_T / \downarrow C_W = \uparrow \text{BAF}$ and low “critical value”
