

2014 Assessment of Ohio River Water Quality Conditions

305B REPORT 2009-2013

Three Items

1. Approval of draft report.
2. Approval of Protocol for Use of Outside Data in 305b Assessments.
3. Comprehensive Review of Methodologies for 2016 Assessments.

Approval of Report

- Assessments approved at Feb TEC meeting.
- Reviewed by 305b Workgroup and their few comments incorporated.
- Provided with TEC agenda.
- If no significant comments by TEC, seek action for approval.

Protocol for Use Outside Data

- Protocol presented at Feb TEC meeting.
- Comments received from PIAC and Water Users.
- Some of those comments were incorporated and we reported back to commenters.
- Asking for action to approve protocol.

Review of Approach for 2016 Assessments

- Have approval and budget for in person meeting of 305b Workgroup. Considering Nov, 2014 timeframe.
- Need comprehensive evaluation of assessment methodologies with input from USEPA.
- Weight of evidence approach is a primary issue.
- Public Water Supply Use assessments also issue.
 - Currently utilizing finished water MCLs as indication of impairment.
 - Originally based on TEC concern that impairment could be indicated when no finished water issues exist.

Weight of Evidence Approach

- Recommended by the Technical Committee and approved by the Commission, October 2011.
- Weight of evidence utilized in the 2014 assessments.
- US EPA's policy is the independent application approach.
- Weight of evidence had effects on aquatic life use, mercury fish consumption, and public water supply assessments.

2014 Assessment Summary

	States	Number Miles Use is Impaired				
		Aquatic Life	Contact Recreation	Public Water Supply	Fish Consumption for PCBs & Dioxin	Fish Consumption for Mercury
PA	0.0-40.2	0	40.2	0	40.2	0
OH-WV	40.2-317.1	0	242.2	0	276.9	0
OH-KY	317.1-491.3	0	65.0	0	174.2	0
IN-KY	491.3-848.0	0	242.5	0	356.7	0
IL-KY	848.0-981.0	0	40.6	0	133.0	0
TOTAL	981.0	0	630.5	0	981.0	0

Aquatic Life Use Assessment

- Assessment includes fish population surveys and water chemistry data.
- Water data compared to applicable criteria.
- Criteria violations $> 10\%$ indicate impairment.
- Aquatic life criteria exceeded for:
 - ✦ Total iron
 - ✦ Dissolved oxygen
 - ✦ Temperature
- Fish population surveys indicate full support river-wide.
- Based on “WOE Approach”, entire Ohio River assessed as fully supporting aquatic life use.

Ohio River Fish Population Index Scores

Aquatic Life Water Criteria Violations

July 2008 – June 2013

Mile Point	SiteName	Criteria Type	Parameter	Criteria	Total Samples	WQC Violations	% Violation
84.2	Pike Island	Chronic AL	Fe (ug/l)	1500 ug/L	30	1	3%
126.4	Hannibal	Chronic AL	Fe (ug/l)	1500 ug/L	30	2	7%
161.8	Willow Is.	Chronic AL	Fe (ug/l)	1500 ug/L	30	3	10%
203.9	Belleville	Chronic AL	Fe (ug/l)	1500 ug/L	28	6	21%
279.2	R.C. Byrd	Chronic AL	Fe (ug/l)	1500 ug/L	30	1	3%
341	Greenup	Chronic AL	Fe (ug/l)	3500 ug/L	31	3	10%
436.2	Meldahl	Chronic AL	Fe (ug/l)	3500 ug/L	30	1	3%
477.5	Anderson Ferry	Chronic AL	Fe (ug/l)	3500 ug/L	18	1	6%
531.5	Markland	Chronic AL	Fe (ug/l)	2340 ug/L	30	2	7%
625.9	West Point	Chronic AL	Fe (ug/l)	2340 ug/L	18	7	39%
776	Newburgh	Chronic AL	Fe (ug/l)	2340 ug/L	30	6	20%

Contact Recreation Use Assessment

- **Assessment includes:**
 - ✦ Bacteria data from 15 historical river-wide longitudinal surveys.
 - ✦ Contact recreation data from the past 5 years collected seasonally in the 6 largest CSO communities.
 - ✦ Vast majority of river is assessed based on historical longitudinal surveys.
- **States' criteria used for assessment.**
- **Criteria violations > 10% indicate Partial Support.
> 25% indicate Not Supporting.**
- **Approximately $\frac{2}{3}$ of river impaired for contact recreation use: Consistent with past assessments.**

Public Water Supply Use Assessment

- Impairment based on finished water MCL violations caused by Ohio River water quality.
- Accessed USEPA data base of MCL violations and water utility surveys.
- Human health criteria violations in $> 10\%$ of samples indicates impairment.
- Several utilities had MCL violations for trihalomethanes & one for HAA5's, one for Fecal coliform.
- Utilizing “WOE Approach”, entire river assessed as fully supporting public water supply use.

Public Water Supply Use Assesment Summary								
Utility Location	State	Number of Intake Closures due to Ohio River Quality	Causes of Intake Closures	MCL Violation	Cause of MCL Viol.	Non-Routine Treatment Required?	Contaminants Resulting in Non-Routine Treatment	Source of Contaminants
West View	PA	0		No		No		
Robinson	PA	0		No		No		
Moon	PA			No				
Beaver Valley	PA	0		Yes	TTHM	No

		Human Health	Phenolics (ug/L)	5.0 ug/L	30	2	7%
846	J.T. Myers	Human Health	Phenolics (ug/L)	5.0 ug/L	30	2	7%
918.5	Smithland	Human Health	Phenolics (ug/L)	5.0 ug/L	30	2	7%
938.9	L&D 52	Human Health	Phenolics (ug/L)	5.0 ug/L	30	3	10%

Fish Consumption Use Assessment

- The entire Ohio River is designated as partially supporting for PCBs and dioxin.
- ORSANCO directed by TEC to use US EPA's approach for determining impairment based on methylmercury fish tissue data.
- Collected data necessary to use EPA's methodology.
- Violations of mercury water quality criterion in $> 10\%$ of samples indicates impairment.
- Using "WOE Approach", entire river Full Support for fish consumption based on Methylmercury.

PCB Levels in the Ohio River

1997-2004

Dioxin Levels in the Ohio River

1997 - 2004

Total Mercury Water Violations

Mile Point	SiteName	Criteria Type	Parameter	Criteria	Total Samples	WQC Violations	% Violation
126.4	Hannibal	Human Health	Hg (ng/L)	0.012 ug/L	30	1	3%
341	Greenup	Human Health	Hg (ng/L)	0.012 ug/L	31	2	6%
436.2	Meldahl	Human Health	Hg (ng/L)	0.012 ug/L	29	1	3%
477.5	Anderson Ferry	Human Health	Hg (ng/L)	0.012 ug/L	18	2	11%
531.5	Markland	Human Health	Hg (ng/L)	0.012 ug/L	30	2	7%
600.6	Louisville	Human Health	Hg (ng/L)	0.012 ug/L	18	3	17%
606.8	McAlpine	Human Health	Hg (ng/L)	0.012 ug/L	19	2	11%
625.9	West Point	Human Health	Hg (ng/L)	0.012 ug/L	19	13	68%
776	Newburgh	Human Health	Hg (ng/L)	0.012 ug/L	30	5	17%
846	J.T. Myers	Human Health	Hg (ng/L)	0.012 ug/L	30	6	20%
918.5	Smithland	Human Health	Hg (ng/L)	0.012 ug/L	29	2	7%
938.9	L&D 52	Human Health	Hg (ng/L)	0.012 ug/L	29	5	17%

Averaging Data Across Trophic Levels

$$C_{\text{avg}} = \frac{3.8 * C_2 + 8.0 * C_3 + 5.7 * C_4}{(3.8 + 8.0 + 5.7)}$$

Where:

C_2 = average mercury concentration for trophic level 2

C_3 = average mercury concentration for trophic level 3

C_4 = average mercury concentration for trophic level 4

****Calculation is based on apportioning the 17.5 grams/day national default consumption rate for freshwater fish by trophic level**

5.7 grams/day of TL 4 fish

8.0 grams/day of TL 3 fish

3.8 grams/day of TL 2 fish

Fish Consumption-Weighted Methylmercury Fish Tissue Averages

Pool	# TL3 Samples	TL3 Concentration Range (ppm)	#TL4 Samples	TL4 Concentration Range (ppm)	MeHg Concentration (ppm)
Emsworth	6	0.0827 - 0.265	5	0.0776 - 0.187	0.131
Dashields	2	0.106 - 0.226	2	0.131 - 0.151	0.156
Montgomery	2	0.0922 - 0.167	3	0.123 - 0.145	0.132

Olmsted	2	0.0494 - 0.0826	3	0.264 - 0.395	0.178

TEC Considerations

- 1) Need consideration by TEC for Approval of Assessments.
- 2) 305b Workgroup would like to have face-to-face meeting before 2016 assessment begins to continue refinement of methodologies (was cut from current budget; \$1,200 budget item).
- 3) Should continue collection of Methylmercury in fish tissue.
