Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Vaish B

We need to keep our standards for ensuring river water quality is as good as possible. I represent a team of breast cancer survivors who are on the river 2-3 times/week. Please don't allow water quality standards to drop - it impacts us all and will make it more dangerous for all recreational river use.

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Joseph O'Sullivan

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Tracy Wells

Dear ORSANCO Commissioners,

Why are you giving up this hugely important role?

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

As a senior citizen who grew up in the Ohio watershed, i know how much improvement took place thanks to regulations. Streams and rivers that could not be used for swimming and fishing improved and thus the quality of life for all living things in the area. This improvement must be maintained and increased.

Sincerely,

Jennifer Holmes

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Anne Benroubi

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Shannon Roth

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Kathleen O'Sullivan

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Jim Allen

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Please do not change what you have been doing with the Ohio river standards. Our water quality in my area has been less than in the past, the test reporting from our water company has omitted many of the past tests, which leads me to believe the results are not good. My home water filter has been getting filled quicker in the past couple years. W do not need to go backward, just because we have a president that is all leaning to industry, without any sense of environment. The past history of how our country was built shows the record of abuse of resources and money, that we should have learned from.

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Mark Lotito

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Date: Friday, August 17, 2018 10:44:38 AM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Andrea Chu

Apologies for submitting comments a little late—I've only just learned of the proposed changes to ORSANCO & Pollution Control Standards and I'd like to add some general observations to this decision making process.

We know that large numbers of US whose quality of Life & Health have benefited greatly by “additional layers of regulation” will reflexively reject “regulation” if/when asked.

That said—I support the continuation of ORSANCO for organizational reasons because if Our Systems of Government have demonstrated anything over the course of the last 200+ years...

We've demo'ed that—Checks & Balances Shared & Distributed Across 3 Branches Looking At Issues & Conflicts From 3 Different Angles—works best for arriving at efficacious solutions and enforcing standards in reasonable time frames.

I strongly recommend continuing with the 3 Levels/Sources of Oversight & Responsibility & Enforcement for the Ohio River Water Quality—The Individual States Involved & The Federal-EPA & The Comprehensive Ohio River Watershed-ORSANCO.

Thank You,
Mary Blanc

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Mark Roberts

To: ORSANCO PSC Committee & Commissioners

From: Cathy Smith

Date: August 6, 2018

Re: Comments on PCS

I oppose and object to the proposed changes to the Pollution Control Standards (PCS) and ask that ORSANCO retain the language passed in 2015. I have lived most of my life in the Ohio River Basin. I feel that ORSANCO is completely abdicating its mission “to ensure protection of these uses and to preserve the waters for other legitimate purposes” if it proceeds with the adoption of the changes proposed to the PCS. This will certainly not result in improved water quality in the Ohio River. It will likely not even result in the status quo for water quality.

US EPA addressed the very issue at the crux of ORSANCO's assumption in a study, titled *A Study of Prospective Water Pollution Control Activities For The Ohio River Valley Water Sanitation Commission*, was released in March 1975, and with respect to “stream standards,” recommended that:

Since the Ohio is a boundary river, and because there are many other relationships as among the several state segments of the river system, the interstate agency should provide the overall view and the comparative analyses needed for coordination, consistency and equity.

Whereas the current PCS state: “Sections 301(b)(1)(C) and 510 of the Federal Act require that permits issued under that system incorporate applicable standards promulgated by an interstate agency wherever they are more stringent than comparable state or federal standards. And that these standards set forth the uses to be protected in the Ohio River (Chapter 2) as established in the Compact, establish water quality criteria to assure that those uses will be achieved (Chapter 3), and set wastewater discharge requirements (Chapter 5) needed to attain the water quality criteria. The standards also recognize the rights of individual states to adopt and apply more stringent regulations.

Specific wastewater discharge requirements are established in these regulations and must be incorporated into discharge permits issued under the authority of the NPDES or state discharge permitting programs when they are more stringent than:

- 1) applicable U.S. EPA technology-based effluent guidelines required under Sections 301, 304, 306, and 307 of the Federal Clean Water Act, or
- 2) any state treatment requirements, effluent standards, or water quality-based

effluent limits.

In the absence of promulgated Federal effluent guidelines pursuant to Sections 301, 304, 306, and 307 of the Clean Water Act, the Compact signatory states have the responsibility to establish effluent limitations to be included in any discharge permit, consistent with the standards contained herein using best professional judgment on a case-by-case basis.”

This is in no way comparable to the Commission simply stating that because state standards are approved by EPA that the river as a whole will be protected. Standards vary state by state. Currently, the PCS regulations require that states use ORSANCO standards or a state standard if it is more stringent. Therefore, the protections will not be consistent or as stringent if these changes are approved and the PCS regulations are gutted.

I continue to assert that some combination of alternative 3 and/or 4 as presented in the preliminary comment period will provide better protection for the Ohio while adhering to the Compact and the mission of the Commission. In addition, a combination of 3 and 4 would also implement the recommendations in the 1974/5 EPA study and continue ORSANCOs legacy of providing valuable leadership to the Ohio River states. Proposing a cost effective way to selectively modify the PCS after review as warranted and increase focus on harmonization of standards and their implementation among Compact states and EPA would preserve ORSANCOs leadership role in the basin.

I object to the proposed changes. If approved ORSANCO is abandoning its mission and obligation to the people of the Ohio River Basin, but even worse, the water quality and quality of life of people in the Ohio River Basin will continue to suffer.

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

From: [Greg Wilson](#)
To: pcs@orsanco.org
Date: Friday, August 17, 2018 11:38:37 AM

To the PCS Committee:

I am an environmental historian and an Ohio historian. The creation of ORSANCO was a critical moment for Ohio and the Ohio River. It represented a state and locally-driven process of recognizing the dangers of unregulated use of the river and establishing an organization to reduce pollution, and educate the population about the river and its watershed. It was clear then, and it is clear now, that very powerful interests want to eliminate those protections; removing the standards would destroy the hard work and success that Ohio and other states have achieved, and threaten the health and well-being of the river, and endanger the drinking water of over 5 million people.

Given how the political winds can change easily, and how critical it is to maintain protections for the river, ORSANCO must maintain its own set of standards to ensure continued success. According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

States can serve as models of successful action on environmental protection - sometimes doing a better job than the federal government. Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

Sincerely,
Dr. Gregory Wilson

Subject: Stop Proposed Elimination of Pollution Control Standards for the Ohio River
Date: Friday, August 17, 2018 11:41:55 AM

Aug 17, 2018

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Subject: Keep ORSANCO's Pollution Standards!
Date: Friday, August 17, 2018 11:42:43 AM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Subject: ORSANCO's proposal
Date: Friday, August 17, 2018 11:50:52 AM

Dear ORSANCO committee,

I am writing to vehemently oppose this preposterous proposal. How could something like this be considered at a time when the water quality of the Ohio river is at toxic levels? In fact, the proposal should be opposite of the current notion: we need more activity on recovering the quality of the river and doing everything possible to prevent further contamination by local corporations that seek to use abuse our public resources at will without consequence. How can we rely on an EPA that is intent on deregulating much of the safeguards on the environment? It is not redundant - it is absolutely necessary to keep independent agency!

Please take the moral and just action and make sure we protect our water as best as we can -- our children depend on you.

Sincerely,
Andy Ayer

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people. PLEASE fight to keep our lakes. Rivers, streams and drinking water safe and clean! Thank you for all you do!

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Douglas Fagan

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Thank you for your consideration.

Sincerely,

Mark Gorsetman

Subject: I live on the Ohio River and urge you to vote NO
Date: Friday, August 17, 2018 12:11:59 PM

Dear ORSANCO Commissioners,

I am writing regarding the 2018 Pollution Control Standards review. I greatly appreciate the hard work and clean water programs ORSANCO staff has implemented over the last 70 years to guarantee a fishable, swimmable, and drinkable Ohio River. That is why I believe it is inappropriate for ORSANCO to remove the numeric pollution limits and public review process from the Pollution Control Standards for the Ohio River.

There are 440 pollutants for which the ORSANCO numeric pollution limit is either more protective or no state water quality standard has ever been adopted to protect human health and the environment. ORSANCO's numeric pollution limits and public review process guarantees all of the pollutants that could impair the Ohio River are adopted in the standards and the states and public have a robust forum to raise and resolve Ohio River water quality concerns.

Please protect the Ohio River by voting NO on the proposal to eliminate numeric pollution limits and public review from the Pollution Control Standards for the Ohio River.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Linda Matychak

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

Subject: Keep ORSANCO's Pollution Standards!
Date: Friday, August 17, 2018 12:20:17 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Diane Bastian

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Subject: Keep ORSANCO's Pollution Standards!
Date: Friday, August 17, 2018 12:45:20 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Subject: Regulations
Date: Friday, August 17, 2018 12:59:30 PM

To whom it may concern,

This email is in relation to the proposal to eliminate some pollution control regulation on the Ohio River. As an Evansville resident I think this is an incredibly stupid idea. The Ohio river is already very polluted, if anything we should be tightening standards not loosening them. Please consider my comments and to not make it easier to pollute the river. Evansville is attempting in downtown Renaissance of sorts and the last thing people want to come to is a Riverfront that looks and smells disgusting.

But if you do go forward and eliminate some regulations, and say screw you to everybody who lives along the river, then I hope some rich people associated with utility and chemical companies can get even more rich. Because in reality, isn't that what this is really all about?

Thank you for your time and consideration. Please don't let us all down.

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Subject: Pollution Control Standards for the Ohio River
Date: Friday, August 17, 2018 1:06:52 PM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

sherita wilson

Subject: Orsanco Pollution Control Standards
Date: Friday, August 17, 2018 1:17:12 PM

I urge all Orsanco Commissioners to not do away with the pollution control standards for the Ohio River. This would adversely affect people, businesses and aquatic life. I strongly believe that any changes in the current standards would leave water quality for the State of Indiana and its people and aquatic life completely unprotected for clean water.

Water quality is a very important part of our standards of living and should be safe-guarded for all concerned.

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Subject: Keep ORSANCO's Pollution Standards!
Date: Friday, August 17, 2018 1:55:27 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

gayle richardson

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Eric Newman

Dear ORSANCO members,

Please do all you can to preserve water pollution standards! We all need protection for cleaner water. I am a kayaker, so I want cleaner, safer water for recreation. More importantly, I want a cleaner river for future generations.

If any changes were to be made, I would support stricter standards, but know that business and industry would take advantage and pollute more if standards were removed or lessened.

Thank you for helping to clean up the Ohio!

Date: Friday, August 17, 2018 2:32:35 PM

To whom it may concern-

As someone who grew up in the Ohio River Valley, who still has family and loved one there, and who hopes to one day return, I must insist that ORSANCO retain its regulatory oversight, and leave in place the existing regulations on pollution levels in the Ohio river. It is more important now than ever that we strengthen our efforts to maintain a safe and healthy river ecosystem. To be dissuaded from that mission now puts decades of progress at risk. Please consider your decision carefully, and decide in favor of protecting our environment. Thank you

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Zara Gennert

Date: Friday, August 17, 2018 2:44:01 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

To: pcs@orsanco.org
Subject: Protect the Ohio River, Too!
Date: Friday, August 17, 2018 2:46:13 PM

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

Rachael Benedict

I am a resident of Louisville and I use water from the Ohio River. Of course I am concerned about your tentative decision to abandon your role and involvement in helping upgrade water quality standards for the states along the Ohio River. The situation will only get worse if you follow through and stop doing this constructive work. I urge you to keep on and even improve the standards for water in this drainage.

To whom it may concern:

I write to you from the shores of the Ohio River in Louisville, KY. The Ohio River characterizes Louisville and preserving its water quality is of upmost importance to Louisville residents and visitors alike.

I ask to you please consider your voting on dissolving the standards protecting this sacred body of water and to make the just decision to maintain these standards to upkeep water quality for future generations. The Ohio River serves as a source of drinking water, recreation and overall sense of place for residents of Louisville and Kentucky as a whole. Please consider maintaining these vital standards to protect this water body.

Thank you,
Charlotte Caldwell

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Joann Adcock

Date: Friday, August 17, 2018 3:16:32 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Subject: Please Protect the Ohio River
Date: Friday, August 17, 2018 3:18:37 PM

Dear ORSANCO,

Hi There!

I'm just writing to say the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO) are super important to me. I know I'm not the only one who wants the pollution control standards to stay as they are and to be maintained. Drinking water authorities and utilities have the same interests! They also see the value of ORSANCO setting uniform standards to help protect drinking water for around 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

Emily Holzer

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Becky Sterling

Subject: Keep ORSANCO's Pollution Standards!
Date: Friday, August 17, 2018 4:14:09 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Subject: Keep ORSANCO's Pollution Standards!
Date: Friday, August 17, 2018 4:45:11 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Phyllis Bottoms

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Elsa Rivers

Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

Living in Pittsburgh off and on for a period of thirty years and being an avid bird watcher for over fifty, I never saw a Kingfisher in Allegheny County until August 2017. On that tributary of the Ohio River where I located this Kingfisher I was pleased to find he has a mate and offspring in 2018 meaning livestock, wildlife, my neighbors and myself have clean water since I can remember.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Elihu Cohen

Subject: Keep ORSANCO's Pollution Standards!
Date: Friday, August 17, 2018 5:35:45 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Richard Boyce

Subject: Standards reduction for water quality
Date: Friday, August 17, 2018 5:40:16 PM

WHAT? The Ohio is already a vile toilet of pollutants! We have to drink that sewage in Evansville, IN. Quality is already dubious and removing protections will only increase it's questionable safety. Not to mention those who enjoy recreation on that body of water will be at increased risks of chemical contaminants and pollutants. We already have to deal with Cincinnati and Louisville's frequent diaper leaks as well as the infamous toxic plume a few years ago from a West Virginia chemical storage facility leak. Corporate America cannot be trusted to protect the population that depends on this river to consume and take care of it's hydro needs. It can ONLY be government over site to fulfill our safety and well-being. I urge ORANSCO to continue it's diligence in keeping all of us protected!

Sincerely,
David Straka

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Lorraine James

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

In my opinion, pollution monitoring and control should be INCREASED not decreased.
There are far too many pulls on the river that can harm communities, businesses and human and environmental health to not monitor riverside industry increases their output in the river.

I object to more lax monitoring and control.

I am James Daniels and I live in Evansville, Indiana. I wish these comments to be part of the comment record on ORSANCO's proposal to leave setting pollution control standards to the individual states. I am also a former member of the Public Interest Advisory Committee to ORSANCO.

This action I feel would worsen the quality of the Ohio River and the river is already considered the most polluted waterway in the country. I would rather see some real enforcement of standards that already exist.

For a state like Indiana, at the lower end of the river, the impact would have the most negative effect as pollution will naturally flow downstream. The goal should be to strengthen standards to reduce pollution and leaving the job to the states will not accomplish this.

To: pcs@orsanco.org
Subject: Protect the Ohio River, Too!
Date: Friday, August 17, 2018 7:46:18 PM

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

Rebecca Slisher

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Chris Hudock

Subject: Keep ORSANCO's Pollution Standards!
Date: Friday, August 17, 2018 8:12:00 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Lynda Ream

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Kathy Gynane

Subject: Keep ORSANCO's Pollution Standards!
Date: Friday, August 17, 2018 9:32:38 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Judy Brickels

This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

janet forman

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. Date: Friday, August 17, 2018 10:44:14 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Pamela Kilgore

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Date: Friday, August 17, 2018 11:41:50 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Lynda Cruickshank

From: [Jenna Glass](#)
To: PCS@orsanco.org
Subject: Pollution Control Standards for the Ohio River
Date: Saturday, August 18, 2018 1:29:18 AM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Jim Andaloro

From: [Eben Hobbins](#)
To: PCS@orsanco.org
Subject: Retaining ORSANCO Pollution Control Standards
Date: Saturday, August 18, 2018 6:58:44 AM

USEPA's Trump-led administration tearing up federal coal-plant power regulations - leaving decisions to the States (NYTimes: "relax pollution rules for power plants that need upgrades" 8/18/18) - informs the need for ORSANCO to retain published Pollution Control Standards that coordinate Ohio River states in protecting that resource from Mercury discharges.

If power plants without "scrubbers" are restarted or remain in operation our basin will be adding to total metal discharges in the Ohio River and sulfur deposition across the basin while contributing carbon to the demonstrable climate change effects present from human-related greenhouse gas global warming.

ORSANCO must retain it's Standards to address these critical issues on a meaningful geographic scale.

Respectfully submitted,

Eben Hobbins

Good morning! I wanted to take a moment and express my concern over this elimination. At a time where there is a large population relying on the Ohio River for its water consumption it does not seem like a good idea to eliminate pollution standards and resources for evaluating the adherence to the standards. I am against this elimination. Thank you for your time and effort in protecting the Ohio valley water ways.

Blessings,
Christy Baker

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether. The fact is everyone needs clean water. Perhaps new, more stringent standards need to be introduced to protect the water that all of us need.

Sincerely,

Debbie Piatt

I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

Wendy Burnette

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Please do not loosen controls on Ohio River pollution oversight. We have made some small progress over the years in cleaning up the Ohio River. It is not much, but it is something. Any loosening of those controls risk public health issues to Cities and Municipalities that obtain water for drinking. Reduction in standards would also increase risk to those fishing, boating, and otherwise participating in river life. The standards are there to protect all citizens, but especially babies and children who are affected by pollutants to a greater degree than adults.

Thank you for your time.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

David Lang

Subject: Monitoring the Ohio River Discharges
Date: Saturday, August 18, 2018 11:30:08 AM

I remember what the Ohio River looked like in the sixties and early seventies before EPA stepped in and required waste water discharges be cleaned up before discharging into the Ohio river. Major and minor companies were discharging all their untreated waste into the Ohio river causing drinking water companies to spend more on their treatment facilities to treat the water before distribution as safe drinking water to the public. Plankton in the Ohio river was at such a low level that fish life in the Ohio were either not fit for consuming or dying off. The water was full of bacteria causing rashes and sickness to people that enjoyed boating activities. It was a mess. But since the EPA set standards and introduced companies like ORSANCO to monitor and fine and shut down a company's discharges to the Ohio river the water is practically safe for consumers to enjoy. I know that businesses weigh the costs to implement waste treatment facilities in their plants it is vital that they do this in order to operate their businesses along the Ohio river or any river system to prevent these waterways from becoming cess pools of filth, and disease-infected lifeless pools.

So I say continue to monitor discharges along the Ohio River.

This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Fran Grady

Subject: Pollution Control Standards for the Ohio River
Date: Saturday, August 18, 2018 12:59:56 PM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Subject: Protect the Ohio River, Too!
Date: Saturday, August 18, 2018 1:02:34 PM

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

Fred Parsons

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Please do not let the large corporations influence your current project\of keeping the Ohio river clean. Clean water is a vital part of the rivers fish population , not to mention needed for everyday needs by people. It is so sad that no one cares , just look at what is taking place right now in the state of Florida. So if you are the voice of the people, and the wildlife that need you, then KUDOS to you , we thank you.

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Susan Cox

Dear ORSANCO via Email,

As a concerned constituent, I wish to express my grave concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is completely unacceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly requires a collaborative approach.

The Commission must continue to uphold its responsibility to protect our waterways, communities and wildlife, and to ensure that all states work toward common goals and a cleaner, safer Ohio River. Thank you.

Sincerely,

Please do not eliminate the current pollution control standards on the Ohio River. I live in Indiana and the standards that are in place here in more than 100 instances are either missing or weaker than the current ORSANCO standards. The ORSANCO pollution control standard is scientifically derived to ensure that the maximum amount of a chemical the river can have and still be healthy for people and aquatic life. We all need safe water!

To whom it may concern,

I am writing to voice my opinion against dissolving your standards that protect the Ohio River. It is my belief that removing your standards will result in increased water pollution and negatively impact drinking water and recreation.

I kindly ask that you retain your current standards and protect the Ohio River. Clean drinking water is vitally important and a safe river for recreation is a necessity. Please continue to protect the Ohio River now and for generations to come. Thank you!

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Amy Greer

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Subject: Keep ORSANCO's Pollution Standards!
Date: Saturday, August 18, 2018 7:15:06 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

IMPEACH the TREASONOUS trump crime family IMMEDIATELY!!!!!! DON THE CON!!!! LOCK HIS CROOKED ASS UP!!!!!! Sad, no amount of DIRTY or STOLEN money buys BRAINS or CLASS!!!!!!

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Sherry Stischok

Dear Sir,

As a family that has lived along or near the Ohio River for over 50 years, I would hope that none of your proposed changes will affect the improvement in the water quality we have witnessed during this time. However we think there is still room for more improvement to ensure safe drinking water for millions of people not to mention the economic value of safe, non-toxic recreation on and in the water such as boating and fishing.

Respectfully,

Dear members of ORSANCO,

As a Louisville, KY native, I strongly urge you to keep or increase the standards that protect the Ohio River from the numerous coal-burning power plants and other sources of pollution that threaten the drinking water of five million people.

The short-sightedness and greed of our current political administration is shameful and abhorrent to me and everyone who cares about the quality of their own life and the life of other species affected by contaminated water.

What will it take to remove the blinders from the eyes of people in power? Please join the world leaders who uphold the Paris Accord and enforce Clean Water Act standards for our region. The world is watching.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

Dear Ohio River Valley Water Sanitation Commission,

Pennsylvania, Ohio and West Virginia are about to see drastic increases in natural gas production which means drastic increases in fracking waste water treatment. We need strong Water Pollution Control Standards, NOT weakened standards. The Ohio River already experiences high amounts of pollution near cities as it courses its way to the Mississippi River. We need to clean up and protect water supplies for drinking, swimming and aquatic life.

I also endorse and agree with the letter below as written.

Sincerely, John D. Lahr

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Carol Azar

Subject: Keep ORSANCO's Pollution Standards!
Date: Saturday, August 18, 2018 10:53:56 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Bill Miller

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Paul Flynn

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

Shauna Schramke

Good day, it is my opinion that without an organized oversight committee the Ohio River water quality will digress. Also, the standards currently in force are not strict enough. It's true that over the past years water quality has improved, however there are still limits on safe fish consumption. When we can relax those limits we can only then claim victory over pollution.

I support the continued regulation, stricter standards and hope other states bordering the Ohio River will do likewise.

Sincerely, Daryl

From: [Keith Lilly](#)
To: PCS@orsanco.org
Subject: Pollution Control Standards for the Ohio River
Date: Sunday, August 19, 2018 8:16:06 AM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

We need ORSANCO pollution controls more now than ever. We are facing the 6th great extinction by the end of the century due to human acceleration of climate change. Since ORSANCO was created we have seen a dramatic improvement in water quality which translates to overall environmental quality in the Ohio River Valley. While it may seem redundant with other environmental regulations to some, redundancy is good when the future of humanity is at stake. Please make sure my grandson and his children have a healthy place to live and prosper.

3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Subject: Keep ORSANCO's Pollution Standards!
Date: Sunday, August 19, 2018 10:02:30 AM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Alicia Bluhm

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Subject: Vote to Drop Pollution Control Standards
Date: Sunday, August 19, 2018 10:24:06 AM

To whom it may concern,

It's my understanding that you want to eliminate your pollution control standards and leave it up to each state to decide what is best. It's my opinion that your organization has done a great job cleaning up the river with the help of these standards. Why let the states do it? You know that politicians will stick their hands in the pockets of big industry. They will relax the standards and let them dump whatever they want into the river. Industries don't care if they poison us as long as they can make more money and politicians don't care as long as they get re-elected. We all know that as long as there is unlimited money in politics, you can't leave it up to politicians to keep anyone from drinking poisoned water.

We are a boating family and we boat on the Ohio River. Do you know how often there is a foamy, yellow scum floating on it? The answer is often and it's disgusting. I love the river, but I don't like to get in it because it's so polluted. God only knows what we are drinking when it's unfiltered. We filter all our water from our taps because we don't trust Ohio River water. How sad is that?

I keep hearing that the river is so much cleaner than it used to be. It makes me wonder how disgusting it was before the commission was formed. It's my opinion that the river is still embarrassingly polluted and has a way to go to in becoming cleaner. If anything, you should tighten your standards not get rid of them. Please vote NO on dropping your pollution control standards. Please don't leave it up to politicians and Industries to decide how much poison they can dump into the river!!

Thank you!

Becky Hill

Dear commission members

I feel that the Ohio River pollution control standards should be kept in place, and even increased. If industries can reduce costs by dumping toxic materials in the river they will. Water is the lifeblood of our planet. No water, no life.

Keep the pollution control standards in place.

Thank you.

From: [Rudy Gallager](#)
To: PCS@orsanco.org
Subject: Pollution Control Standards for the Ohio River
Date: Sunday, August 19, 2018 11:22:15 AM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Watershed wide interstate standards on discharge to the Ohio River ***should continue***. Politics and lack of funds will cause changes in what states are willing and able to do as far as regulations, monitoring and enforcement, without common expectations.

Within common interstate standards, is right to modify or even relax specific limits, based on evidence/new understandings.

I am a father of teenagers, manager of an Evansville POTW (wastewater treatment plant), and very frequent river user. I am proud of the river and always trying to share the experiences of, understanding of and appreciation of the river.

Thank you!

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Laurie Puca

Subject: Revised Pollution Control Standards
Date: Sunday, August 19, 2018 12:47:18 PM

I am now retired and living in Kentucky. However, I have over 20 years of environmental protection experience working with the Indiana Department of Environmental Management. As a staff member and then Supervisor of the Environmental Emergency Response Section, I've had numerous opportunities to work with ORSANCO in responding to pollution incidents in the Ohio River and have great respect for the organization. However, I just learned that ORSANCO is considering elimination the water pollution standards that you have as guides for all the states to follow. Elimination of these standards will result in a race to the bottom; to the detriment of the river you are supposed to protect. Please do not eliminate these standards.

Thank you.

Re: Comments on PCS

I oppose and object to the proposed changes to the Pollution Control Standards (PCS) and ask that ORSANCO retain the language passed in 2015. I have lived most of my life in the Ohio River Basin and have spent considerable effort over the decades working to protect and improve the Ohio River. Without ORSANCO oversight I have little doubt individual states will vary hugely in their regulation of effluent entering the river. For such multi-jurisdictional resources as a major river system, having a system in place to insure equitable constraints across state boundaries is imperative.

Don't make a decision that will likely result in losses to the gains made to water quality of the Ohio River over the past few decades with ORSANCO overwrite.

Subject: Pollution Control Standards for the Ohio River
Date: Sunday, August 19, 2018 1:25:15 PM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Subject: Public Comment on ORSANCO regulatory authority
Date: Sunday, August 19, 2018 1:27:47 PM

To whom it may concern:

I am writing to oppose the dissolution or reduction of ORSANCO and its regulatory authority concerning Ohio River pollution, safety, and health. The kind of regional, interstate regulation and oversight represented by ORSANCO is a model for other rivers and regions to follow, and should not be discarded. All those who live along the Ohio, as we do here in Louisville, have a shared interest in the state of the river from its headwaters all the way to Cairo, Illinois where it meets the Mississippi.

While federal standards like the Clean Water Act should be observed and enforced, if our Ohio River community requires or prefers standards that go beyond the Clean Water Act, we need ORSANCO to retain its authority. Without ORSANCO, if the Clean Water Act should be nullified or modified to reduce safety standards, we can't depend on each state along the Ohio to work independently to ensure outcomes that work for the benefit of all others. To ensure equity and enforcement, we need ORSANCO.

Thank you,
Aaron Rosenblum

Subject: Move To Repeal Ohio River Pollution Standards
Date: Sunday, August 19, 2018 1:46:03 PM

To whom it may concern:

I agree with Ryan Van Velzer, now is not the time to decrease scrutiny of what is being dumped in the Ohio River, which happens to be the source of drinking water by repealing Ohio River pollution standards.

"ORSANCO's pollution control standards include regulating water quality criteria, designated uses and wastewater discharge requirements."

The reality is the EPA's Clean Water Act grows weaker every day by the current U.S. administration. Do we really intend to rely solely on that federal institutions to ensure Louisville's water quality is maintained. Look at the job they did in Michigan. Kentucky's current administration is not that much better. I think removing Orsanco's pollution control standards will be a huge mistake that will certainly lead to negative impacts down the road!

Date: Sunday, August 19, 2018 2:16:19 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Kim Kensler-Prager

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Winifred Boyd

Subject: DO NOT ELIMINATE POLLUTION CONTROL STANDARDS
Date: Sunday, August 19, 2018 3:24:34 PM

I am appalled that you are considering eliminating your efforts in pollution control. You should in fact make increasing the restrictions on pollutants in the Ohio. It is in the interests of all citizens in the Ohio River Watershed to have as many agencies as possible influencing water quality.

I live in Evansville IN. and use the river for recreation. I fish, duck hunt, Kayak, and knee board the river as well as simply sit on the bank and enjoy it. I have been in Evansville since 1974 and have seen citizens use of the river increase. It is important to downtown Cincinnati, Owensboro, Evansville, and My. Vernon.

I, as a resident of the Ohio River Area, and a consumer of the public water supply drawn from the Ohio river, am appalled that anyone would consider repealing the current standards regarding the pollutants that can be released into the Ohio river. If anything, the standards should be increased. With the current administration's moves to repeal or reduce federal standards, state and regional standards need to be upheld stringently. We need to lead the way in keeping our water resources as pollutant free as possible with strict regulations about the types and amount of pollutants allowed.

Subject: Object to repeal of ORSANCO standards
Date: Sunday, August 19, 2018 3:52:04 PM

Greetings,

I am writing to object to the repeal of ORSANCO pollution standards. I believe, considering the Ohio River was considered the most polluted river in the country in 2015, that we should be strengthening pollution standards. The federal EPA is going through an unfortunate identity crisis, and leaving standards up to the states will create inconsistencies downstream. This uncertainty in government action leads me to believe that river oversight by ORSANCO is in the public's interest.

Thank you,

Subject: Do not dissolve ORSANCO
Date: Sunday, August 19, 2018 4:11:32 PM

I am gravely concerned that ORSANCO is voting to dissolve its standards that protect our Ohio River. I believe this lack of oversight will greatly diminish our water quality—including drinkability, recreational use & pollution. I strongly urge you to please reconsider this choice. Thank you,
Sharon L Afams

KWA continues to be concerned that the Ohio River Valley Water Sanitation Commission (ORSANCO) will soon vote to dissolve its standards that protect the Ohio River. It is our belief that removing the standards will lead to increased water pollution and negatively affect our drinking water and recreational opportunities.

If you are concerned about the water quality of the Ohio River, we urge you to contact the commission to voice your opinion against dissolving its standards. The comment period has been extended until August 20 (it was originally August 10) so now is the time to act.

Comments can be submitted two ways: via traditional mail and via email.

Mailed comments should be addressed to: ORSANCO, 5735 Kellogg Avenue, Cincinnati, OH 45230, Attn: PCS Comments.

Subject: NO to eliminating historic pollution control standards for the Ohio River.
Date: Sunday, August 19, 2018 4:15:12 PM

Dear ORSANCO commissioners:

Please do not abrogate your historic responsibility of maintaining the control standards for the Ohio River, the source of our drinking water!

We understand the pressure is on to delegate your authority to the EPA to monitor the waters of the Ohio River. Isn't that the proverbial fox in the hen house? I hear that big polluting industries moving into the Ohio River Valley are making it difficult for you to be our last remaining watch dog.

It is up to you, and to all of us to take on the corporations and the politicians who endanger people and the planet for profit. The dark money from Chinese investors must be hard to turn down, especially when it brings jobs and prosperity to our poor neighbors in rural West Virginia. But if Montana can wage that battle, surely Ohio can. ORSANCO stands in the vanguard of this effort. We count on you as we have done since you were founded back in 1949.

People who came to public hearings from many of the eight states that border the Ohio cried out to you with rage, terror, and tears. Please do not "water down" your water quality standards.

Thank you for listening and acting.

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

terry poulson

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Janet Gressel

Vote NO... We should only ever make dumping regulations more strict... we are not only poisoning ourselves but poisoning our children... how can we protect our selves and future generations when we cant even take our need for water seriously... people who are profiting from this lax in regulations do not live here and will not have to swim in the raw sewage and toxic wasteland... they will not have to drink the questionably safe water or eat the mutated and tainted fish...while other areas are banning straws and understanding that we need the environment to survive... we are about to force people to drink all consumable water out of plastic bottles because our water is so polluted... when will it end, when will we stop destroying the very cornerstones we need to survive and prospure

Dear ,

ORSANCO,

I am writing to let you know that many constituents, along with myself, strongly opposed your 2018 revision of the Pollution Control Standards. As a proud Ohioan, I'm appalled that the Ohio River is the most polluted river in the nation, and devastated that ORSANCO is considering removing regulation that has been improving the water upon whose quality we depend.

The parameters listed for deletion are not redundant to state EPA standards. There are 188 standards set by ORSANCO that the EPA does not regulate, and 252 that are stricter than the ones set by the EPA. Metals such as Hg will accumulate and concentrate up the food chain and are toxic to human health; parameters such as COD, BOD, PO4 and NH3 will lower water oxygen levels, result in algae blooms, and disrupt natural ecosystems.

ORSANCO's role in maintaining the Ohio River is more important than just data collection and distribution. Year in and year out, you have partnered with both state and national EPAs and, together, have helped us make strides in improving the Ohio River. Your role in regulating interstate industrial effluent is paramount to that goal.

I appreciate the quality of life that industry has given us. However, it must not be at the expense of the water we drink, fish, and play in. Please know that ORSANCO is an important part of the checks and balances of the Ohio River. Please continue to be responsible and conscientious by maintaining the current water standards.

Sincerely,
Stephanie

We demand that ORSANCO's pollution control standards remain in place!

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

To ORSANCO commissioners:

I am a citizen of Cincinnati, located along what is currently the most polluted waterway in our country. I was shocked to learn that you are seriously considering Option 2, which guts ORSANCO's oversight and leaves our already vulnerable water supply in deep jeopardy.

We depend on good drinking water—it is not a luxury, it is foundational. Your job is to protect our water. This should not be about making it easy for industry to pollute, but it seems to me that is exactly what it is about.

Commissioners with ties to industry—for instance, Commissioner Snavelly (retired from 8 Excel Mining), Commissioner Flannery of West Virginia (connected to the National Coal Council), Commissioner Potesta (has represented DuPont, one of the worst polluters of the Ohio)—should not be entrusted with making decisions about cutting regulations. Any commissioner that has such ties to industry with a vested interest in lowered standards should not be permitted to vote on relaxing standards.

It is shameful that you are moving to gut these standards, and that despite public outcry have not held more meetings for public comments. You work for the public, not for industry, and yet it appears you have forgotten your mission.

Please look hard at your consciences. Imagine the situation in Flint, only exponentially bigger, impacting up to 5 million people. There are some things more important than industry and profits. You have been entrusted to safeguard this essential resource, and pretending that you are eliminating "redundant" standards when it has been proven that there are at least 188 instances that ORSANCO's current standards are NOT in existence in the state standards you reference.

It has been said that those who have not learned from history are condemned to repeat it. Think Flint, Michigan. Think the burning rivers of the recent past. Think Love Canal. Please do not gut ORSANCO's regulatory powers. Instead, uphold your mission: To control and abate pollution in the Ohio River Basin.

You have done admirable work in the past. Please return to the mission and do the right thing: Reject Option 2, and keep the stricter standards.

Sincerely,
Elaine Olund

Subject: Pollution Control Standards
Date: Sunday, August 19, 2018 6:47:40 PM

To Whom It May Concern:

I am writing to urge you to resist industry pressure by keeping the critical Pollution Control Standards in place.

The magnificent Ohio River flows nearly 1000 miles through six states, providing drinking water for more than 5 million. Its watershed, the Ohio River Basin, spans over 200,000 square miles and covers parts of 15 states and more than 27 million people. The Water Authority that provides my drinking water, the West View Water Authority, draws its water from the Ohio River.

The Ohio River is also the most polluted body of water in the United States for seven years running, so this is the time to keep you Pollution Control Standards in place. Some of the reasons for keeping them are:

1. Several states rely on ORSANCO's standards and adopt them as their own. If ORSANCO no longer sets these standards, those states will have to expend the financial resources to develop the requisite standards.
2. ORSANCO should be setting uniform standards with the collective input of all basin states.
3. If all Ohio River states have to develop their own standards, then the situation can lead to interstate conflicts when an upriver state has weaker standards that lead to increased pollution treatment costs for a downriver state. This would, inevitably, lead to litigation among the states.

There are many people who are relying on you to protect this important waterway.

Sincerely,

Angelo Taranto

Date: Sunday, August 19, 2018 7:30:11 PM

o: Mr. Richard Harrison, Director and others as appropriate

As a resident of Evansville, IN, I would like to voice my disagreement with the commission's proposal to drop pollution control standards for the Ohio River. The Ohio River provides a source of recreation for residents. It also is a source of drinking water for many. As a resident of the area, I am concerned that the Ohio River is already one of the nation's most-polluted waterways. Dropping or lessening pollution control standards set by ORSANCO would not benefit the goal of keeping a clean, safe and usable waterway.

Leaving the states to solely enforce water standards places our waterways at increased risk of pollution. We need to prevent outcomes like those that have occurred in Flint, Michigan and other cities. There are many industries along the Ohio and the potential for increased pollution is high. Trusting the States and the industries to self-regulate is naive at best. Water contamination impacts the health and welfare of all of us in the region. I urge the commission to not approve this proposal and to be vigorous in creating, monitoring and enforcing standards that ensure our waterways remain safe.

Thank you,

Amanda Mattingly
Evansville, IN

Keep ORSANCO and its pollution control standards! The states in the Ohio River watershed need the coordination that it provides, as well as the oversight. The oversight of the EPA, especially in the current administration is worse than useless. Indiana EPA is also lacking. Keep ORSANCO and keep an eye on the water quality, please.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Kyle Jones

Subject: OPTION 2 regarding the Ohio River
Date: Sunday, August 19, 2018 7:47:28 PM

To ORSANCO commissioners:

I am a citizen of the Cincinnati area, located along what is currently the most polluted waterway in our country. I was shocked to learn that you are seriously considering Option 2, which guts ORSANCO's oversight and leaves our already vulnerable water supply in deep jeopardy.

We depend on good drinking water—it is not a luxury, it is foundational. Your job is to protect our water. This should not be about making it easy for industry to pollute, but it seems to me that is exactly what it is about.

Commissioners with ties to industry—for instance, Commissioner Snavely (retired from 8 Excel Mining), Commissioner Flannery of West Virginia (connected to the National Coal Council), Commissioner Potesta (has represented DuPont, one of the worst polluters of the Ohio)—should not be entrusted with making decisions about cutting regulations. Any commissioner that has such ties to industry with a vested interest in lowered standards should not be permitted to vote on relaxing standards.

It is shameful that you are moving to gut these standards, and that despite public outcry have not held more meetings for public comments. You work for the public, not for industry, and yet it appears you have forgotten your mission.

Please look hard at your consciences. Imagine the situation in Flint, only exponentially bigger, impacting up to 5 million people. There are some things more important than industry and profits. You have been entrusted to safeguard this essential resource, and pretending that you are eliminating “redundant” standards when it has been proven that there are at least 188 instances that ORSANCO's current standards are NOT in existence in the state standards you reference.

It has been said that those who have not learned from history are condemned to repeat it. Think Flint, Michigan. Think the burning rivers of the recent past. Think Love Canal. Please do not gut ORSANCO's regulatory powers. Instead, uphold your mission: To control and abate pollution in the Ohio River Basin.

You have done admirable work in the past. Please return to the mission and do the right thing: Reject Option 2, and keep the stricter standards that protect lives and preserve the environment.

We're counting on you to protect this precious resource.

Laurie Lambert

Subject: Changes to ORSANCO's PCS
Date: Sunday, August 19, 2018 8:07:43 PM

We are concerned regarding the proposed changes to ORSANCO's Pollution Control Standards. ORSANCO provides an invaluable resource that maintains a high standard that keeps the Ohio River healthy and safe for both the communities and wildlife touched by the river. The proposed changes to ORSANCO's pollution control standards would put those communities and the health of the river at risk.

Thank you for your consideration,
Anna Kirschner

Subject: Regulations
Date: Sunday, August 19, 2018 8:10:03 PM

I am no environmentalist, but some common sense needs to be used. Why would you even consider removing the regulations? The Ohio has been polluted for decades and it was starting to recover and now this. Left unchecked corporations and individuals will take advantage of situations and loopholes. Being retired Regular Army I have seen too many rivers polluted beyond use and it will make the Ohio River the same type of cesspool as The Tigris and Euphrates.

There is no reason why the Commission should not continue as both environmentally and economically it makes sense. When are the polluters' going to clean the river of the damage they have already done?

Subject: City of Cincinnati resident comments opposing PCS proposal
Date: Sunday, August 19, 2018 8:49:06 PM

Dear commissioners:

As a resident of the city of Cincinnati, I'm writing in opposition to the proposal by the ORSANCO commissioners to eliminate its responsibility for developing regional pollution control standards. I note that in the previous public comment period, the Greater Cincinnati Water Works, from which I get my own drinking water, opposes this proposal as well.

Having reliable access to clean drinking water is a serious matter with which I have first-hand experience. After living in Ohio for all my life, I moved to New Orleans for some time. Several times a year, I would be advised to boil my water due to failures of the water system, and given the highly industrialized effluence and runoff into the water around the region, one could only imagine what contaminants were in the water (and how unlikely it was that boiling would do much of anything). After I returned to my home of Cincinnati, I recently thought how glad I was that I have now gone five years without having to boil my water or fear for my safety any time I turn on the taps. I fear that what I experienced in Louisiana will soon become a new reality here in Cincinnati should you fail to maintain your responsibility for pollution control standards.

As water pollution issues increase not only in Cincinnati but across the region, it is astounding that the commissioners would entertain such a preposterous idea as abandoning one of the important tools in the toolbox for ensuring uniform water cleanliness standards in a highly-industrialized region of 5 million people. The proposal to do away with regulating uniform pollution control standards is an abdication of your responsibility for the original intent of the compact, and it is clear that the EPA's administration of the federal Clean Water Act is insufficient on its own to ensure a clean river.

I call on the commission to drop its proposal to eliminate its pollution control standards, and I strongly encourage the commission to *expand* the standards currently in existence. As the River continues to rank as one of the dirtiest in the nation, it is clear *more* oversight is needed - not less.

Sincerely,

Eira Tansey

Hello ,

ORSANCO has been the Ohio River watch dog for years, successfully cleaning up the river as it has never been before. This was done for us and generations to come.

If this project is allowed to move forward for the sake of corporate profits, years of progress could be undone in the bat of an eye.

Obviously, we can no longer rely on the EPA and it's up to us and ORSANCO to protect OUR river and maintain safe drinking water. There will be an uprising if this project goes ahead and puts corporate profits before the health of over five million people.

Please do the right thing,

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists, and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

I am concerned about the proposal to eliminate some pollution control standards for the Ohio River.

I understand that each state would still set their own criteria but when it comes to air and water, there are no state boundaries. What happens in one state can affect others. I also understand the concern of some groups that it adds a layer of rules. But I firmly believe that in the case of protecting our natural resources, shared standards are best.

The Ohio River has improved vastly since the creation of ORSANCO but the work is not done. There are still problems with urban and agricultural runoff, industrial pollutants, and more.

I respectfully and passionately encourage you to maintain the pollution control standards.

Thank you.

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

tera nethu

Subject: Pollution Control Standards for the Ohio River
Date: Sunday, August 19, 2018 10:11:33 PM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Subject: Keep ORSANCO's Pollution Standards!
Date: Sunday, August 19, 2018 10:27:35 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Rachel Hess

The residents of Flint Michigan are the living testimony of leaving water quality in the hands of State Public Officials.

The current EPA has an operating agenda similar to the outfit that created the Flint Michigan water crisis.

Rivers have been the victims of abuse by a lack of regulation and a lack of enforcement of improper discharge of harmful chemicals.

People rely on the Ohio River for drinking water. People pay a lot of money to have safe drinking water.

Human lives rely on strict water quality standards and enforcement.

Public safety is an obligation not a left wing liberal agenda.

Thank you. Malcolm Gwinn Evansville, Indiana

Subject: PCS Comments
Date: Sunday, August 19, 2018 10:47:38 PM

Dear ORSANCO PCS Committee Members,

I am a citizen of Kentucky. I care deeply about the protection granted to and restoration required for our waterways and wetlands under the Clean Water Act of 1972.

Since 1948, ORSANCO has held the responsibility of ensuring the Clean Water Act is carried out for the Ohio River and its tributaries. As I understand it, ORSANCO is acting under its agreed-upon mission now, in seeking public comment on issues it intends to consider for the upcoming 2015 Triennial review of its Pollution Control Standards (PCS).

The Ohio River is a critical waterway, not only for myself, but for millions of other Americans that depend upon it for drinking water, recreation, fishing and commerce. Historically, and to the present day, it is also a recipient of significant amounts of waste from industry, whether it be the old steel industry, pig processing facilities, power plants, commercial fisheries, chemical processing facilities, or the fracking industry. It has become quite tiresome to see continued high levels of toxic pollution in the Ohio. It has also become quite disturbing in recent years to see ORSANCO seemingly backtracking on certain pollution standards.

Regarding the issues that ORSANCO is seeking comment on, I have the following comments:

Any changes to existing water quality criteria must be to increase human health and aquatic life protections. Changes should not be made that result in less stringent protections for the Ohio River. Positive revisions to the PCS would include a modification of the E.coli standard to meet EPA's adopted criteria; modification of the ammonia criteria to meet EPA's recently adopted criteria; and adoption of numeric nutrient criteria.

The Commission's consideration of the mercury standard, and likewise, the consideration of the ban on mixing zones for Bioaccumulative Chemicals of Concern (BCCs), are very hard to reconcile. In the past several years, the Commission has created a variance procedure for permittees allowing them to request to continue operations of mixing zones for BCCs, and has also failed to ensure that each state in the compact took the necessary steps to meet the October 2013 deadline for the ban on mixing zones for BCCs. I do not want my health, my children's health or the health of downstream communities to be put at risk for the benefit of multi-million (or billion) dollar companies. Please maintain the mercury criterion, and maintain the October 2015 date for a ban on use of mixing zones for BCCs.

The Commission should also ensure that any variation of criteria for Total Dissolved Solids is

able to protect aquatic life from the various constituents, like bromine and bicarbonate.

Hydraulic fracturing has become very widespread over the last five years in Ohio, Pennsylvania, West Virginia, and small parts of Kentucky. This practice has a wastewater byproduct, in the billions of gallons, that contains significant quantities of salts, bromine/bromide, and radionuclides, all of which are frighteningly dangerous to aquatic life and human health. Fracking wastewater is being stored in locations immediately adjacent to the Ohio River, or is being treated at facilities with discharges into the Ohio River. The Coast Guard is currently considering a process to allow barging of this fracking wastewater on our waterways. The pollutants in fracking wastewater must be further restricted. Industry cannot be allowed to continue to willingly risk or willingly pollute the public's resources and public health. ORSANCO must take action, or bear the risk of being embarrassed for having done nothing to protect the health of citizens up and down the river from radioactive waste. For any facility or entity that wishes to store, process, or transport fracking wastewater by or on the River, ORSANCO should require a bond be posted to sufficiently compensate for the cleanup of any potential spills, for which taxpayers would otherwise be required to pay.

Thank you for the opportunity to comment early in the process.

Sincerely,

Patti Bell

Subject: ORSANCO's (Ohio River Valley Water Sanitation Commission) pollution control standards - proposed revisions
Date: Sunday, August 19, 2018 10:53:45 PM

I am writing to voice my opposition and dismay to the proposals on the table that would weaken standards, and especially to the proposal (proposal 2?) that would eliminate all standards.

ORSANCO has received numerous comments, and by far the majority of comments, in writing and at the one hearing in Northern Kentucky (which I attended), express sound, evidence-based arguments explaining why this proposal is nothing short of insanity.

It is clear to those of us that have Ohio River water coming out of our faucets, and anyone who studies the evidence, that the river remains polluted, and ORSANCO standards remain critical if anything will ever be done about it. It is also clear that removing these standards will throw state regulators into chaos, as where states have effective regulations, they are written to depend on ORSANCO's standards.

But rational arguments may not suffice here. The politics behind this proposal is very suspect and the ties of the commissioners to industry concerns must be questioned.

But beyond this is a basic question of legality. How can a commission chartered by law to set standards, vote out it's own standards? Could a School Board vote that it is no longer interested in having anything to do with schools? Could a taxation authority vote that it considers taxes unnecessary? I submit that you do not have the legal authority to decide via deregulation that your entire mission is no longer necessary - you are charged to carry out that mission, not to withdraw the mission itself. If you go forward with this extreme measure, it is my hope that local citizens and environmental groups will band together and take you to court to get an injunction against your actions. It is also my hope that the governors of every state served by ORSANCO will immediately replace any commissioner in favor of removing standards.

Sincerely,
Linda Newman

Subject: Please Maintain and Enhance Health Standards for our Ohio River
Date: Sunday, August 19, 2018 11:15:08 PM

Dear Friends at ORSANCO,

We so appreciate your monitoring and care of the Ohio River over these years, and so are alarmed to hear Big Organized Money - FDR's term for this group he deemed as worse than the mob - is twisting your arm to lesson standards for our Ohio, while we all need to be raising our standards. Thanks to the Isleta Pueblo and partners, several years back now, Albuquerque was required to recognize a standard for the Rio Grande leaving their city as drinkable waters. This is more the direction we all need to head, given the health of our waters pre-European settlement to now.

While many are beginning to recognize more place and community-based cooperative industries as the healthier model - ones like Mondragon of Spain's Basque region, who hold a cap of 6.5 times the lowest income in their cooperative corporation of industries - as we naturally seek to move into mutual economy, and so mutual society and ecology, we still see a greatly driven thrust of money, power and privilege addict led, pyramidally structured imperially economic institutions belligerently running all to ruin - our whole planet, in this greatest of all addictions, and most abusive toward all, greed. FDR in his day also began setting a cap on capitalism, for the sake of mutual well being.

Please instead move in the direction of the Community Rights / Rights of Nature movement, as others explore in Ohio, in a network with many townships to nations in Ohio, the USA, and globally, where constitutions and amendments are written locally, etc., to reposition Peoples, Community and Nature over Corporations, Property and Commerce, turning around our movement from monarchies, in our revolutions seeking mutuality, straight into a harmful spiral of neo-imperial plutocratic oligarchies, globally. Now that we have clear neurological visuals on how Power Causes Brain Damage, as the Atlantic article of this title shares, seeing how those with this addiction easily lose the part of the brain that allows empathy... we have no reason to allow those who hoard our symbolic means of exchange for status and control to continue to abuse all peoples and swiftly degrade all Life systems.

If we can recall how for our vast generations we shared Life carefully, caring for all, knowing that in crashing our regions, we crash ourselves, crashing our communities we crash ourselves, we may be able to see how this is the basis of any economy. The Indigenous still teach, trying to call us homeward from being lost and assimilated in false imperial economics, how in gratitude for Life's gifts we need to reciprocally restore in our giving back. We can see from Storm Cunningham's studies how Restoration Economy is moving ahead, the title of his book regarding, while those swindling communities of their true and natural wealth continue to push the spin that they are needed as 'they trickle down to us'. We pour the gold down their greedy ravenous gullets. Studies by Ruut Veenhoven and associates show how this grossly more than needed income does nothing for their true happiness, either, as we broadly see with addictions upping the ante of false needs.

In a time of mass extinction, when the end long near by the prophets, is now here and closing per science, for false profiteering, we cannot, and none can afford further backsliding into destruction and devastation by this great addiction that squanders Life's inheritance for all and

all generations ahead, by tricks of the imperial trade. We The People must turn all this around to our greatest ability, and depend on and demand the active wisdom also of our public servants, even if our commercial servants have lost their decency or reason... in this disease, and head us into tens of millions of years, likely, of restoring ourselves from a greatly contaminated bleakness if not worse, becoming a Mars or Venus... if we are more fortunate, for all generations to judge ours, as we need to judge our collective behavior in sick business as usual, and our choices for how we may move into solution, recalling to each other our much more deeply rooted, and compassionately related common sense for how mutual health and well being is our true wealth, and rich relatedness, long held by our most indigenous, still, holds the remaining richest places of our Earth.

As one who is born of and has long lived as of this watershed in Southwestern Ohio, I plead with you all, to please choose to stand now on the right and healthy side of history, seeking to align again with Life, meekly, culturally to biologically, inter-dependably on her terms.

Sincerely,
George Hardebeck

Subject: Strengthen and Maintain Your Regulatory Standards - Don't Weaken Them
Date: Sunday, August 19, 2018 11:33:43 PM

Dear ORSANCO,

I'm writing because it has come to my attention that you are considering weakening your environmental regulatory standards for the Ohio River, and I wanted to express my fullest objections to this possibility.

Weakening regulatory standards increases the burden on individual states and municipalities to treat their watersheds. This makes no sense. Water is not a resource that conforms neatly to state or municipal lines. The Ohio River is a regional concern precisely because if one corporation or pollutant enters into the waterways it has the ability to negatively effect all who use them, not just those in the immediate vicinity of the specific polluter and/or pollutant.

That is why ORSANCO must *strengthen* it's regulatory standards, not weaken them. At a time when corporations have more power than ever, and exploit our most basic resources with increasing disregard, it is essential that ORSANCO demonstrate that it is on the side of *the people*, not big corporations.

Because why else would you even consider weakening your regulatory standards, given what we've seen occur in Flint, and Cleveland, and so many other Rust Belt cities? The answer is obvious: because weakening regulations would be more profitable for corporations who don't want to think about where they dump their toxins and chemicals and waste.

No regular citizen living along the Ohio River and its watersheds supports this kind of regulatory relaxation. Not the dozens of citizens who spoke at the last public meeting you held in Kentucky, or the hundreds of letters, like mine, that you've received which speak to this issue, and not the numerous friends and colleagues I've spoken to who express surprise and alarm when I explain them about what your regulatory body is considering doing.

However much you try to obfuscate and claim that public support is divided on this issue, *we know better*. I want to be very clear about this: you're not fooling anyone that ORSANCO relaxing its regulatory standards is for the public good. The public good is not synonymous with corporate profits, and ORSANCO's willingness to consider what is nothing less than the plain abdication of its duty shows us that, in fact, corporate profits and the public interest are quite often *opposed*. I am emailing to demand that you act to preserve and strengthen the existing regulatory system in recognition that corporations have too much power in this country, and that regulatory bodies like ORSANCO are one of the only ways we have of checking that power and making it accountable to the public good. Thank you.

Sincerely
Dario Sulzman

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Karen Karr

To Whom It May Concern:

I am writing to express my deepest concern about the ORSANCO pollution control standards being rolled back in favor of relying solely on state-level pollution control standards. I have lived in Cincinnati near the Ohio River for 33 years, and am currently raising three young children in Cincinnati, and having access to clean, safe drinking water should be one of the most critical priorities of our local, state and national governing bodies not just for my family, but for all who live in the Ohio River valley and connected regions.

It is painfully obvious to say, but water access is so basic a need for ensuring public health across all groups of people in our country that it must be safeguarded in every way possible, and rolling back regulations and cancelling standards reviews serves absolutely no demonstrable benefit to the people who live near the Ohio River. The current proposal to roll back regulations and stop reviewing standards on a regular basis has the potential to create another disastrous water quality situation as we have so recently seen occur in Toledo, Ohio and Flint, Michigan due to lax standards and irresponsible industrial corporations. It also creates dramatic inefficiencies by breaking down a single party responsible for monitoring and setting standards into a multiple parties with lower current standards and no coordination. The responsibility to safeguard our previous water will then be something that each individual state must bear on its own without a body to coordinate between them. And with different states being located at different points along the river there are obvious reasons for having a single body and single comprehensive set of standards that are developed via input from all affected states.

These catastrophic potential risks can be avoided by maintaining, if not improving, current water quality standards so that our neighbors in the region, and generations to come who share our natural water resources, can benefit from our efforts today to safeguard such a critical resource. Please consider the benefit these standards have for real people living in the region, and do not give in to corporations and industrial polluters who simply want to increase their profits by spending less money controlling the pollutants that they pump into our shared water resource, all at the expense of the health of people in our region.

Sincerely,
David O'Connell

It is incredibly important that we use the most stringent water regulations available. This water is our drinking and bathing water. My family cares what's in it. Hold companies accountable and stop waste from reaching my water.

Thanks,
Robin Weiss

Subject: Keep ORSANCO's Pollution Standards!
Date: Monday, August 20, 2018 12:55:18 AM

Dear ,

I am writing to let you know that many constituents, along with myself, strongly opposed your 2018 revision of the Pollution Control Standards. As a proud Ohioan, I'm appalled that the Ohio River is the most polluted river in the nation, and devastated that ORSANCO is considering removing regulation that has been improving the water upon whose quality we depend.

The parameters listed for deletion are not redundant to state EPA standards. There are 188 standards set by ORSANCO that the EPA does not regulate, and 252 that are stricter than the ones set by the EPA. Metals such as Hg will accumulate and concentrate up the food chain and are toxic to human health; parameters such as COD, BOD, PO4 and NH3 will lower water oxygen levels and/or result in toxic algae blooms.

ORSANCO's role in maintaining the Ohio River is more important than just data collection and distribution. Year in and year out, you have partnered with both state and national EPAs and, together, have helped us make strides in improving the Ohio River. Your role in regulating interstate industrial effluent is paramount to that goal.

I appreciate the quality of life that industry has given us. However, it must not be at the expense of the water we drink, fish, and play in. Please know that ORSANCO is an important part of the checks and balances of the Ohio River. Please continue to be responsible and conscientious by maintaining the current watershed standards.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Corinne Swanson

From: [Chris Gutjahr](#)
To: PCS@orsanco.org
Subject: ORSANCO Needs to Continue Monitoring the Ohio River
Date: Monday, August 20, 2018 1:19:01 AM

I believe that ORSANCO should continue to monitor the environmental safety of the Ohio River the way it has for the past 60 years. Ohio River water is the drinking water for the communities and cities in eight states along the river. The water standards need to be the same for each state because each state's pollutants affect all other states downstream. The federal government has forced reduction of EPA standards in favor of industry and money, increasing the possibility of environmental health issues like those in Flint MI. Reduction of standards to support big business is criminal especially when it negatively affects human lives. The current administration seems to have few checks and balances. ORSANCO has provided necessary checks and balances for 60 years and was doing this before the EPA even existed. With a weakened EPA, ORSANCO needs to uphold the high standards the EPA will not. If ORSANCO doesn't, what organization will protect the people from environmental harm. I have relatives in PA, WV, and OH who will all be affected by decreased standards. I live in Cincinnati, Oh.

Please consider maintaining high standards for the river you are supposed to be protecting for the good of all living things.

Thank you, Chris Gutjahr

I am **AGAINST** ORSANCO dropping its pollution control standards.

I do NOT trust that advising committees that include representatives from utilities, chemical companies and other industries, that could prosper from lower standards, would look out for my best interests, and not their own.

I also do NOT trust that the EPA (under the present administration) will look out for us. All I see are weakening of standards that help big business, while lowering protection for those of us who drink the water. I think we need more oversight, not less.

Date: Monday, August 20, 2018 7:26:24 AM

To whom this may concern,

The Ohio River is our source of water. It is public knowledge that toxic waste, raw sewage, and other trash are in our water. That is why we have some of the cleanest drinking water in the country. We need MORE and EXCESSIVE regulation as to what can be dumped in the river. Whoever believes that less regulation would help may not have an understanding of what clean water means to us. As a Louisville native and resident, I strongly urge The Commission to uphold the most regulation of the Ohio River pollution standards. As a 24 year old, this River is my future water source. It is important that the leaders in power now acknowledge this. It is not just a dump for anybody. These regulations and standards should be upheld and maybe even INCREASED; but not decreased or removed. This is a dangerous thought and no dollar amount is worth polluting the already most heavily polluted river in the US even more. I will make myself available to further comment or speak before the Commission with other youth leaders to come to an agreement. We believe this is for our better future and the future of Kentucky youth, and the youth of the Ohio River Valley.

Respectfully,

Joseph Parker Henry

Please do NOT disband or otherwise reduce the powers of ORSANCO. The EPA is in unsafe hands as they continue to strip protections across the nation. The Ohio is just starting to recover -- allowing further dumping would be a disastrous move for generations to come, not only impacting the flora and fauna and delicate ecosystem, but would effectively kill tourism in cities who rely upon the river as an attraction. Waterfront Wednesdays, Thunder Over Louisville, the Madison Regatta are but a couple that come to mind.

Our rivers are the lifeblood of the nation -- if anything they need MORE oversight, not less. Please continue to protect them against the recklessness of the current admission.

Thank you,
Heather L Harmon

Subject: Protect the Ohio River, Too!
Date: Monday, August 20, 2018 8:03:03 AM

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

Emily Obringer

I am writing to ask ORSANCO to not abandon their mission to be the "voice of the Ohio River and those who depend upon it." This mission not only affects us today but will impact our legacy for future generations. It is imperative that ORSANCO retains its authority to protect the Ohio River and those it impacts. ORSANCO's oversight has been and hopefully will continue to be a vital part of the protection and health of our waters and lands.

My husband and I receive our drinking water from the Ohio River. We want all cancer causing chemicals removed from it, which means testing it properly. ORSANCO was created because it was not practical for each state to do this individually. You are fully aware that your recommendation is based on the false assumption that the EPA does this same testing - it does not. Your testing mission is as important as it was when created in 1948! If you have children don't make them ashamed of you. Be on the right side of history. If you don't want to do this job you should resign and let others that are committed to the ORSANCO mission do the job. Please reconsider & support alternative #3 or #4.

Subject: Public comment on ORSANCO pollution control standards
Date: Monday, August 20, 2018 8:11:36 AM

To whom it may concern,

As a Pittsburgh resident, I'm writing to express my opinion that ORSANCO should not remove regional pollution control standards, because state-level pollution control standards are not adequate.

The Ohio River is a national and regional treasure -- for clean drinking water and for recreation. But the river is only as healthy, clean, and protected as its tributaries and headwaters from multiple states are. ORSANCO guidelines, along with federal and state regulations, have played an important role in improving water quality in the Ohio river watershed. We should not move backward by removing those pollution control standards.

Right now, federal water protections are under constant attack from polluting industries and from ideological politicians who are opposed to any regulations that put the public interest, and public health, above their profits. These attacks are also happening at the state level. In Pennsylvania, we have more than 200 full-time lobbyists for the oil and gas industry in Harrisburg lobbying our state government. We need ORSANCO's independent, science and health-based standards to protect our water from rapid deregulation at the state and federal levels.

Removing ORSANCO pollution control standards does not serve the public interest. The only beneficiaries would be the chemical industry and the fossil fuel industries. While they can see increased profits from this change, the rest of us would see nothing but dirtier water. And the communities most likely to suffer are low-income communities and communities of color. At a time when we should be advancing environmental justice, removing ORSANCO pollution control standards could instead exacerbate environmental inequality and put our most marginalized communities at risk.

ORSANCO should be setting uniform standards with the collective input of all basin states. Several states rely on ORSANCO's standards and adopt them as their own. If ORSANCO no longer sets these standards, those states will have to expend the financial resources to develop the requisite standards, and differing pollution control standards between Ohio River states could lead to interstate conflict and litigation.

Sincerely,
Neil Bhaerman

To whom it may concern,

I am submitting this email to express discontent with the proposed updated pollution control standards regarding the Ohio River. The Ohio River watershed extends across large swaths of the eastern, midwestern, and southern portions of the United States, and the proposed pollution control standards significantly reduce protections that ensure clean water safe for use by humans and for the existence aquatic life and dependent ecosystems. I sincerely hope ORSANCO will consider adding to protections for the Ohio River and set precedent in resisting current federal proclivities toward deregulation.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Subject: Proposed changes to pollution standards
Date: Monday, August 20, 2018 9:17:35 AM

I endorse the comments and positions of Mr. Fitzgerald that are included below. Additionally, as a boater on the Ohio with two small children, I find it appalling that these actions are being considered. History will not judge kindly those who vote for this proposal which will, without a doubt, increase pollution levels in the Ohio.

Sincerely,

Daniel Borsch, BS Environmental Policy, University of Michigan School of Natural Resources and Environment.
JD, University of Indiana College of Law.

First of all, I would like to say that how much I appreciate the discussion that we have had as part of the Pollution Control Standards Committee on this issue. I appreciate all of the comments we have received both from the public and from the various advisory committees to the Commission. I would ask, and I did mention, that I would be opposing the motion, and I wanted to just very briefly reiterate my concerns. First, as one of the two Federal Commissioners, it has been an honor to represent one of the partners to a historic Compact among the States in the Ohio River Basin, which pre-dated by some sixteen years the adoption of the 1972 Water Pollution Control Act, and which I believe continues to have a vital role in setting standards for the control of discharges of pollutants into the Ohio River Basin.

I take my direction both from the Compact, which the Federal Government is a part of, and which has been endorsed by Congress, and I take it also from the goal of the Clean Water Act and its amendments, which was an aspirational goal of attempting to end water pollution by 1985. We have, and the States have, made great strides; however, as is reflected even using the weight of the evidence approach in the 305b report, we have a way to go yet in order to restore and maintain the health of this great River.

My concerns with going forward with alternative 2 for the second round of public comment are several. First, I believe that the proposal, which jettisons all of the numerical standards and a number of the other provisions in the current Pollution Control Standards, is inconsistent with the Compact and with our obligations as signatories to the Compact. Second, I believe that the evidence that has been developed regarding the relationship of the standards to individual state standards and of the necessity, or lack of necessity, for continuing the standards, is largely anecdotal. The only analysis that we have was prepared by staff, comparing the minimum water quality criteria of ORSANCO's 122 minimum criteria, and as you will recall, it reflects that there is not redundancy, which is the underlying premise that animated the development and the advancing of alternative 2. There are instances in which there are standards that ORSANCO has adopted that the States have not adopted, and there are instances where ORSANCO's standards are more rigorous than those that have been adopted by the individual states.

The PCS are not redundant. Understanding the very astute observation by one of my fellow Commissioners, that the presence or absence of the same standard does not necessarily correlate to better or worse protection of the aquatic resource and the functions and values of that resource, it was incumbent on us to take the next step and to measure the relative effectiveness of each state's implementation of the PCS.

We did not, as a Committee, and we have not, as a Commission, done the legwork that is necessary to determine whether, in the absence of those comparable standards, a given state's program is comparable in terms of the level of protection achieved. And until we get to that point of saying that despite the differences in the values of the standards or the number of the stringency of the standard, that the state is doing the equivalent of what would be required under the standards, we cannot, I think, in good conscience say that the standards no longer have currency and no longer give good value.

Another concern, (and I know that this has, at least on our conversations in committee, evoked some negative response), is that it is a fairly accurate to say that the current management at the Environmental Protection Agency, at the national level, has signaled that there will be delays and possibly repeals of the number of provisions that

directly affect discharges into this great River. Given the uncertainty that is occurring with respect to the national rules, I don't know that this is the time for us to signal a retreat from the historic function of the Commission of setting standards and encouraging the states to work cooperatively to assure that those standards are implemented.

I did note, and I appreciate the dry and important work of the Ad Hoc Committee on policies and procedures, that the alternative that I had offered as part of this process, which is to look at harmonizing the state implementation of standards to protect the various uses, in fact, was an existing policy dating back to 2002, which we just repealed a couple of minutes ago and are referring back to the Pollution Control Standards Committee. That is where I hope there is fertile ground for looking at and eliminating redundancy and looking at and harmonizing the way that standards are applied in permit processes in order to assure consistency, in order to prevent pollution, which of course is the premise behind the 1972 Clean Water Act, and to assure that we are continuing to make progress on restoring and maintaining the functions and values of this great River. So, with that, and because this has been such a divisive issue, not only in terms of the Commission, but in terms of the various committees, because it has justifiably called into question in some in the eyes of some, our commitment to maintaining and advancing the Compact, because there is no unanimity among the various states that are involved in the Compact, and because of great concern that moving forward at this point will disrupt efforts to improve water quality; for all of these reasons, I would ask that we vote against sending alternative 2 out for the second round of the triennial review, and that instead, we reconsider more nuanced efforts to maintain the currency of the Pollution Control Standards and to address those rare instances in which there is conflict among the states in implementation of the PCS.

Dear all:

Please keep the Ohio River clean. It is horrible what is happening. I miss Mary Armacost as our Water Supervisor. What are you people doing?

I can't believe this is even something that is up for debate. Do we seriously have to explain why it's a bad idea for companies to determine what they can dump into the river? Do we need to explain the benefits of clean water? Anybody ever heard of Flint Michigan? This has to be a joke.

Subject: ORSANCO's PCS
Date: Monday, August 20, 2018 9:26:45 AM

I would like to express my opposition to the proposed changes to ORSANCO Pollution Control Standards (PCS).

The proposed changes (Alternative 2) would essentially abdicate ORSANCO's authority to develop and enforce Pollution Control Standards. It works against ORSANCO's mission to protect the Ohio River and the drinking water source for 5 million people.

As the sole entity overseeing the Ohio River Basin, ORSANCO provides consistency and uniformity between states. Doing away with the pollution control standards will open the door for discrepancies between states, passes regulatory costs back to the states, and expose the Ohio's water quality standards criteria to the political whims of each state. ORSANCO's own analysis shows there may be up to 188 instances where ORSANCO has criteria and the state or EPA does not, negating the argument that ORSANCO's PCSs are redundant.

Additionally, ORSANCO's research initiatives look to position ORSANCO as an advocate for achieving improvements across ORSANCO's multi-state jurisdictions. Pollution Control Standards are ORSANCO's main mechanism for instituting consistent changes across all compact states. This is especially important as we face the uncertain changes to the river as a result of climate change.

Please do not proceed with Alternative 2 in your consideration of possible revisions to ORSANCO's PCS programs. Thank you for your consideration.

At a time of increased pressure and uncertainty on our environment due to the current federal administration plus climate change, we need over-sight of the Ohio at the state level more than ever. The states most affected and with the most geographic control over river pollution must continue their vigilance over this essential and irreplaceable resource. Your fellow citizens are depending on you.

"We know that we have different political areas- that the nation has its particular sphere of activities and the state its particular sphere. But, our problem could not be solved solely by state or by national actions because the geographical features involved have furnished us units which do not correspond with either state or national units. We call these units 'regions.' One thing before us, challenging our intelligence as a nation, is how to arrange, within the constitutional frame-work of that nation and of the state, for regional activities. " (Alfred Bettman, 1935)

To whom it may concern,

Growing up in the Ohio Valley and living here as an adult, I have grown to love our river. As someone who studies history, though, I have also come to realize we are in a unique moment of Ohio River history. After a significant movement away from the river during the past century, the region is finally going back to enjoy the waterway- building river front parks and continuing to enjoy fishing, boating, and at times swimming in the water way. The Cincinnati area has become well known for its Smale Riverfront Park, the Banks, Paddlefest, and BB Riverboats- as well as so many other businesses, gathering areas and events in which the Ohio River is front and center. We enjoy the beauty of a waterway that draws us together, as a region and individual communities. In addition, the Ohio finally abandoned its title as the "most industrially polluted river" in the United States just three years ago. The "at risk river" narrative has very much left the minds of residents, and it may appear as though the region finally has it together in protecting the Ohio River Basin. However, history has shown this is not a guarantee. It was a long road until the region, as a whole, gained teeth to have a say what can be done to and enter the Ohio that knows no political boundaries.

As you will recall, ironically just a week before the annual 2018 Ohio River cleanup across the Valley, the Ohio River Valley Sanitation Commission (ORSANCO) had a preliminary vote of 14 to 6 to stop creating its own pollution standards for the river. In the previous months, industry claimed the the commission should go back to it's "original" mission and focus on education and monitoring. However, these decisions and claims were incredibly frustrating for me as a historian as this quite a deviation from historical accounts of how and why the commission was created; education and monitoring came as the commission realized these were important components of growing widespread support for its regulations.

Many articles love to point out that the commission has been around since 1948, but it was well in the works beginning in the early 20th century. Since the 1900s, Ohio Valley residents have recognized the importance of having a regional commission. Key in the ORSANCO's compact signed on June 30, 1948, after decades of negotiations, is the regional approach to maintain a healthy, well-used, multipurpose Ohio River. This regional response was essential. Inherently, the river's flow from Pittsburgh, Pennsylvania to Cairo, Illinois places downstream communities at a greater risk for potential issues. In the early twentieth century, the lower basin states struggled to create legislation that addressed the heavily polluted waterway. States could legislate what happened within their own boundaries and tributaries, but they didn't necessarily have say over the Ohio River. Cincinnati and the state of Ohio, for instance, had very limited control over what industries in Pittsburgh and Eastern Kentucky dumped into the waterway. Phenols, a by-product of coal mining up stream that can cause severe skin damage to permanent organ damage, were an early target of the commission. Beyond pollution issues, other industries, such as the musseling and pearl button industries, struggled to maintain ensure longevity, as states' legislation varied greatly and, as the river was an open resource, it was in the interest of states' competitive economies to limit regulation. Responsible states that sought to protect the mussel population were at a competitive and economic disadvantage. Yet, the Ohio River, between pollution, re-engineering of the river, and unregulated harvesting of mussels, lost most of its population in the twentieth century. Our region knew it could do better and has done better in protecting our river resources. It is not enough to depend on states and the federal government to look out for our regional interests.

The lesson of ecology is that regional responses to the problems faced by rivers, and those that depend on the river, are necessary. Ohio Valley residents should not willingly give up their authority to regulate their own river and default to the state and federal Environmental Protection Agencies. In the past, the EPA's regulations were not enough, and we have come to enjoy a river that we can very much attribute to the work of the Ohio River Valley Sanitation Commission. ORSANCO's greatest strength is its ability to have a diverse board and workforce that puts industry, scientists, environmental groups and the general public in the same room; it's structure is unique and very different from that of the EPA or environmental movement interest groups. This is a commission I want to remain powerful and relevant in the present and in the future; defaulting to only a role of "monitoring" would weaken the commission and it's ability to truly work in the best interests of the region.

The benefits of a strongly regulated river even go well beyond a healthy riparian environment and improving water quality; businesses and cities have come to love and build around the river that has been beautified, a goal over a century in the making. Are we truly ready to give up the Ohio River we have come to benefit economically from, know, enjoy and love? I suppose the public will find out soon, but I implore ORSANCO to think beyond "development" and industrial benefits of potentially putting our river at risk and losing our ability to say, as a region, where we would like to see our protection efforts.

To add my voice on the history of ORSANCO and its role in the history of the Ohio Valley region, I am pasting a chapter in progress to this email that I worked on while obtaining my Master's degree in Environmental History (I am happy to forward a better copy with the footnotes in mind.) It will provide a historian's point of view on ORSANCO's very important status and, although this portion of the story ends in 1950, how it grew to become what it is today. Although almost 70 years divides this period from the present, the basic truth is the following: The environment needs conscious and constant protecting. Ohio Valley residents want healthy, beautiful communities, a safe environment, and a reliably healthy source of water. Both in the past and the present, we want a say in the choices our neighbors can and cannot make and not have to solely default to the federal government to decide and enforce what is right. In addition, we seek a strong commission that can look out for our regional interests juxtaposed with neighboring regions. ORSANCO has filled this void and represents residents and business alike in a powerful way, albeit not recognized appropriately for its value by all. It appears there will always be tension created by regulation, but that is not a good reason to abandon this portion of the commission's mission. ORSANCO has accomplished great things in the past and should continue holding the power it needs to continue protecting the interests of our region.

Best,

Ohio River Valley Sanitation Commission: Cincinnati's Answer to Regional Pollution of the Ohio River

Kristen Fleming

From its founding through the nineteenth century, Cincinnati forged an intimate, complex, and weathered relationship with the Ohio River. Although the city grew from this river that connected its residents to the regional and national markets and aided in its role as a commercial center, its days as the commercial center of the Midwest had come and gone.^[2] No longer a direct source of wealth, the "Beautiful Ohio" continued to provide water for Cincinnati's municipal and industrial consumption but assumed a new role as a recreational and aesthetic asset as well. The relationship between Cincinnati and the Ohio River grew increasingly complex during the early to mid-twentieth century, as not every river community shared the same view and experience with one another.

At the turn of the twentieth century, beloved sources of entertainment along Cincinnati's portion of the Ohio River included recreational boating, fishing, and swimming.^[3] Directly across the river from the city, bathing beaches in Kentucky, such as Queen City Beach in Bellevue and the Princess, Manhattan, Berlin, Gem, and Tacoma beaches in Dayton, became popular destinations of amusement for individuals and families, especially during the summer months. On average, the beaches attracted as many as 7,000 to 8,000 bathers on the weekends. They were also important gathering places for celebration. Coney Island, a prominent resort on the Ohio side of the river, attracted about 300,000 visitors for its Fourth of July celebration alone.^[4] The shallow water and natural sandy riverbanks contributed to the creation of prosperous resorts and the Greater Cincinnati's nickname as the "Atlantic City of the West."^[5] At the Queen City Beach, the steamboat, Island Queen, was prominently staged for its visitors; thus, the river's role in the city's commercial past was not forgotten but played upon and proudly displayed as a piece of the Cincinnati experience.^[6] Newspapers, leaders, and citizens of the region painted a picture of Cincinnati as an interior paradise for residents and visitors alike, centering their prospect on the beautiful and affluent Ohio River.

In reality, Cincinnati's waters were far from this professed paradise. The Cincinnati and Ohio governments, as well as ordinary citizens, increasingly began to realize this discrepancy in the 1920s. There seemed to be no one quick and easy solution, however, to make reality fit the representation. Cincinnati shares the Ohio River with eight other states, as it flows from the meeting of the Alleghany and Monongahela rivers in Pittsburgh westward to where it ends its journey at the Mississippi river in Cairo, Illinois. Among these neighbors are the states of Pennsylvania and West Virginia, both of which are major players in the national coal industry. Historically along the river, same as most other major rivers in the world, cities and industries dumped untreated waste into the Ohio. As populations grew, though, this old method of dilution became outdated and insufficient to ensure the health of the public and environment. This standard practice was not only imprinted on the river's ecology and surrounding landscape but on public memory as well; decades later, in 1943, *The WPA Guide to Cincinnati* made a point to cite that in the past "the river spewed all kinds of human debris into the city."^[7] This waste accumulated in the river as its water travelled from one city to the next, increasingly creating environmental and human health problems for the cities downstream. Natural processes of decomposition simply could not keep up as communities increasingly concentrated in the Ohio River Valley. Each municipality blamed the one upstream for the polluted water, relinquishing responsibility for the contaminated resource. Cincinnati denounced the cities of Pittsburgh and Portsmouth, among many others, for failing to control its output of waste; meanwhile, Louisville, Evansville, and Cairo included Cincinnati in their lists of offenders in adhering to an unofficial good neighbor policy.

The general belief was prevalent during the early twentieth century's progressive era that improved environments, through the alleviation of pollution and other physical and health threats, would lead to better, more organized and controlled societies. This conviction encouraged improvements aimed at creating a comprehensive, public, citywide and permanent system to deliver sanitary services at the local level. Cities could either direct their waste to an undesirable parcel of land just outside of the city, as Cincinnati had done with Mill Creek valley,^[8] but directing it towards a river was ideal as it provided a natural flushing system. Sanitation reform through the addition of public sewage facilities in urban Western societies such as Germany, England, and the United States greatly improved sanitary conditions, but again, the prevailing thought was to prevent disease by flushing dirt, foul odors, and filth away from a specific urban population.^[9] Rather than ridding the sewage of its harmful qualities, municipalities directed the wastes to the river, with little or no thought about what this meant for communities downstream. These efforts did very little to address problems that were regional in nature, such as river and stream pollution experienced in the Ohio River Valley. Rather, these improvements only aggravated the situation in the region because greater amounts of domestic wastes were directed to the river as each city extended its sewerage systems.^[10] River cities invested large sums of money in sewage facilities in the late nineteenth and early twentieth centuries. Cincinnati alone invested over \$3,000,000 in sewer construction during the 1910s.^[11] The methods of waste disposal and lack of regional cooperation, though, stunted the Ohio Valley's ability to adequately address the surmounting pollution issue.

This mentality of little consideration for municipalities downstream led to formal responses that justified the lack of action, such as legislation known as the 1908 Bense Act in Ohio. This law stated downstream communities were not required to treat wastewater before dumping it into the water supply

unless every municipality upstream had done so. Kentucky and West Virginia technically owned the river, and Ohio felt without jurisdiction over the river, any attempts to require communities and industry to treat wastewater would be unjust and fruitless.^[12] By the 1920s, the cherished Cincinnati beaches began to close due to the ubiquitous presence of sewage in the waters, and fishermen experienced considerable difficulties.^[13] For Cincinnati, the only viable plan to address the pollution in the river was through direct cooperation with its neighbors.

The state of Ohio's lack in ability to address these public health problems was not the only issue the Greater Cincinnati area had to face to conserve its river. In efforts to conquer nature and engineer a more predictable flow, an entity of the federal government, the U.S. Army Corps of Engineers, drastically altered the Ohio River through canalization and various flood control measures between the 1880s and 1920s. The Corps modified and utilized a technology borrowed from the Seine River in France known as the wicket dam. These dams allowed for predictability for navigation by raising or lowering individual dam wickets depending on the high or low flow of the river to maintain a reliable channel depth of at least nine feet.^[14] While the developments greatly assisted commerce, the Corps decelerated the water's velocity and transformed the river into a series of slackwater pools. ^[15] This tended to localize pollution near its source.^[16] The federal entity, concentrating on the goal of easier and reliable navigation, inadvertently accentuated the Ohio River's pollution problem.

By the beginnings of the 1920s, communities along the Ohio River could not ignore the changes within the river. Businesses were forced to close, and recreational past times were hindered significantly. The Ohio even no longer resembled the river once known to the valley. Besides the increase of sewage in the water, the river varied less season to season, and the sands were quickly covered in mud. Nevertheless, the changes generally appeared, in theory, to benefit the communities they affected. It made little sense to oppose the improvements unless a general consensus, not only within a municipality but also within the entire region, arose that the pollution issue would need to be addressed. It would not be until 1934 that a movement emerged out of Cincinnati, spearheaded by businessmen, to tackle the larger pollution issue amongst the states in the Ohio River Valley on a remarkable and unprecedented scale.

Early Efforts Through the 1920s

As early as 1908, the same year as the passage of the Bense Act, representatives from Ohio, Pennsylvania, and West Virginia met to discuss the work each state had undertaken to protect local streams against pollution.^[17] Each state had its own stream commission but this was one of the first efforts for the neighbors to meet and bounce ideas off one another. At a meeting held in Wheeling, West Virginia on May 18, 1909, Judge H. E. Corn of Ironton, Ohio, recommended that all legislatures adopt a law "to prevent the introduction of any additional sewage into the Ohio River or into any of its tributaries which affect the public water supply of any municipality." This was key, as the prior year, the Ohio state legislature exempted every municipality along the Ohio River from installing sewage-treatment works until comparable facilities were provided by all municipalities upstream from it. Corn's suggestion meant that even Ohio would be held liable to treat its wastewaters, as much as Pennsylvania and every other upstream state. However, nothing came of his suggestion other than simply more recognition of the problems upstream communities caused for those downstream.

Other than general understandings and a few minimal scientific studies, the state-level leaders knew very little about the extent of the river's diminished health. A first step in addressing the larger problem would be to understand the severity the Ohio River pollution. The relatively informal group discussed a survey study of the river at the 1909 meeting in West Virginia as well; Pennsylvania's chief engineer, Mr. Herbert Snow, committed the health department to investigate the limited boundaries of his state, while Ohio agreed to survey the river up to Cincinnati. [18] The following year, the joint commission hired an engineer to create a preliminary report on the cost of sewage purification in Cincinnati. By 1911, the Ohio Board of Health began an education campaign in towns along in hopes "for the purpose of arousing public interest in the matter of the protection of the Ohio River against pollution." [19] The health departments understood the hazards of water pollution on public health and began tackling the issue to the best of their ability. Nevertheless, the Ohio Valley states did not pass extensive legislation and much of the action remained within the health departments. It created no permanent, strong structure, and national and local groups were rarely involved in the planning and implementation process.

In the early 1920s, drinking water taken from the Ohio River began to smell and taste strange to residents along the Ohio River. Several states' health departments responded by handing the issue over to the federal government. They informed the United States' Public Health Services of their concerns related to the disposal of a particular chemical resulting from coke processes and oil refining referred to as phenolic wastes. [20] Within the next two years, the U.S. Surgeon General called together representatives from the Ohio Valley for two national conferences in Washington D.C. to address their concerns and potentially create some form of organization to address the phenol problem between the states. [21] An organization against phenol wastes was created with the Ohio Department of Health's director of health, Dr. John Monger, as its chairman. Demonstrating that the phenol organization was mostly a national government endeavor, the group's secretary wrote to every state's department of health asking for statements of attitudes about participation in and cooperation with this organization. [22] It was uncertain that any of the states would participate in addressing, or were even concerned with, the river's pollution issue.

Three months later, at a meeting on April 14, 1924 in Pittsburgh, only three states' chief engineers (Ohio, Pennsylvania, and West Virginia) attended and participated in drafting an interstate agreement, the "Ohio River Interstate Stream Conservation Agreement," that was officially signed in November of that very year. However, rather than the agreement being among the states or cities themselves, which did not equally have legal status in these matters, it was an agreement among the health departments, without the backing of any state legislation. While the original intent of the agreement was to correct the phenolic waste troubles, it created a uniform policy for dealing with all *industrial* byproducts. Within the next two years, supplement agreements were added that extended the arrangements to apply to Kentucky, New York, Maryland, Illinois, Indiana, and Tennessee as well. By 1928, the Ohio River Interstate Stream Conservation Agreement consisted of eleven states. [23]

The Ohio River Interstate Stream Conservation Agreement created a "Board of Public Health Engineers of the Ohio River Basin" that would meet at least once a year to specifically discuss phenols. The signatory states were required to "promptly institute action to require... elimination or removal [of phenol and other tarry acids] by suitable treatment prior to discharge" and to notify states downstream of any unusual events along the river, such as spills and disease outbreaks. The members of the Board also exchanged research on policy and discharge of wastes, for the benefit of all involved states. Inspections of one another's water works, polluted streams and tributaries, proposed remedies for pollution, and reports were arranged as well. [24] However, the agreement and board to address phenols had several potential problems to truly abate pollution and clear up the Ohio River. First, group did not clearly define and describe the sewage treatment requirements for municipalities; rather limits were only placed on industry. [25] More importantly, though, the efforts failed to create an equal and permanent structure amongst the states to discuss pollution in general and adequately pull powers together to enforce the necessary regulation to protect and conserve the Ohio River's health and enforce the necessary regulation to protect and conserve the Ohio River's health and ecology. Nevertheless, phenol levels decreased for the time being, as between 1924 and 1927 the joint efforts reduced the number of plants that discharged phenol wastes into the river from seventeen to only four. [26] Fears largely subsided until another threat would arise and spawn a sense of urgency.

The Early 1930s

The 1920s were relatively calm in terms of disrupting natural phenomena. It appeared that the Army Corps of Engineers did indeed successfully tame the wild river through canalization. However, a drought in 1930 and another that followed in 1934 once again raised the issue of cooperative pollution abatement among the Ohio River Valley states. [27] By 1930, many cities along the Ohio River had not developed sewage treatment facilities, as they were not required, and the low flow periods during drought resulted in problems for municipalities, such as Cincinnati, who relied on the river for palatable and safe drinking water. [28] Drought conditions resulted in the stagnation of water behind the Army Corps of Engineers' dams for at least a period of ten months. [29] These pools virtually became open cesspools. [30] River conditions forced the U.S. Congress to distribute about \$2,000,000 to state and local health departments in emergency relief health work in 1931, as epidemics of gastroenteritis spread along the Ohio River valley. [31] The first rise of the river aggravated the water purification issues by overwhelming the few existing treatment facilities; often, raw, untreated sewage managed to completely bypass the system. [32]

In the case of Cincinnati, the city spent several millions of dollars on improving its sewage system in the previous two decades. Per the Ohio State Board of Health's 1913 sewage plan, Cincinnati built several interceptors and planned for treatment plants. However, when the droughts hit, the construction of the treatment plants for the Duck Creek, Mill Creek, and the Ohio River areas were still not completed. [33] By 1934, the bacterial count in the Ohio River skyrocketed as more

upstream municipalities directed their wastewaters directly to the Ohio instead of just outside city limits. Cincinnati had to moderate the problem with no permanent treatment facilities to adequately sanitize its water. [34]

According to Chief Engineer F. H. Waring, on the other side of the river, Kentucky was actually in better shape than Cincinnati, despite having no plants for the development of intercepting sewers. This is because Cincinnati's plans were based on the river's height and flow in 1913, but by 1932, the Army Corps of Engineers considered reconstructing "Dam No. 37." [35] Their plans would raise the water elevation by 15 feet, destroying most of progress on the city's sewage system projects. [36] This reveals a lack of communication between the Army Corps of Engineers and local planning that had the potential to ruin a multi-million dollar investment by Cincinnati. In addition, though, the federal dam and navigation projects already built actually aggravated the pollution problems of the Ohio Valley region. The dams caused unnatural pools of water, which provoked unpredictable complications for sewage treatment facilities. Cincinnati experienced a situation in which local planning, without extensive communication with the federal government, practically negated over two decades of work and investment. The city was left unprotected and vulnerable.

In November of 1931, a waste spill occurred at a coke plant in Youngstown, Pennsylvania. As required by 1928 Ohio River Interstate Stream Conservation Agreement, the district notified all municipalities located downstream. Notification, though, could not protect residents from the impact of contaminated water. Within fifteen days, Cincinnati experienced phenolic tastes in its water supply, which continued for about two weeks. On top of this issue, the river water tested to be the hardest since filtration began in 1907. [37] When called in to respond to the situation, Chief Engineer Waring concluded the low flow caused extremely nominal dilution, emphasizing bad tastes present in the water. The cold, winter weather accentuated the "phenolic," "saline," and "river" tastes the community complained about as well. For Waring, the answer for the city and others was to adopt additional new treatment facilities, as planned, to relieve such problems. [38] Nevertheless, it became more apparent to some states that the federal government needed to step in with legislation to attack pollution and "ultimately take a hand in interstate streams." [39] Others, however, rejected this idea and sought for continued cooperation between industries and all the states in the Ohio River Valley. [40]

During the early 1930s, the beginning of the New Deal era, centralization through the federal government seemed to be the answer for many complex issues in the United States. It is logical that the federal government's hand in finding a solution to Ohio River pollution appeared to be a feasible and effective answer. However, Ohio's past experience revealed that the federal government alone could not get states involved in pollution abatement. A successful resolution would have to mediate between both proposals.

Cincinnati Chamber of Commerce's Regional Interstate Solution

In 1934, the Cincinnati Chamber of Commerce gathered to discuss its annual local "Clean-Up and Beautify Week." Traditionally, the committee brainstormed projects to "beautify" the city, such as picking up trash, creating gardens, and painting homes in strategic areas. However, when the chairman wrapped up the meeting, he asked if there was anything left to be addressed in the city, one man responded with a suggestion of much greater scope and gravity than those typically raised at such routine meetings. As it was one of the city's greatest assets, this man, Hudson Biery, recommended that the chamber address the increasingly polluted Ohio River. Biery had no prior professional experience with water pollution and was simply the director of public relations for the Cincinnati Street Railway Company and concerned resident of Terrace Park. An outsider to the public health and engineering groups that typically handled the water supply and disposal of wastes along the river, Biery still observed that the river was becoming increasingly polluted and, despite the city dumping millions of [Photograph of Hudson Biery](#)^[41]

dollars into the situation, public health was at stake. Biery wanted to start a campaign for regional co-operation in pollution control that would alleviate some of the problems faced by Cincinnati, since "citizens of Cincinnati [didn't] want to be reminded every time asparagus is served for supper in Pittsburgh or some other upstream community."^[42] He believed, "the time is at hand for someone to provide a rallying point for control of water pollution in our valley."^[43] What better way to "clean up and beautify" the city than to begin addressing the problems of its water?

His suggestion was timely, even beyond the impeding local conditions in Cincinnati that contributed to a sense of urgency. Historian Martin Melosi claims, "from the fiscal perspective, the economic disorder of the late 1920s and 1930s changed the nature of city-federal relations and transformed what had been local service delivery into systems increasingly influenced by regional and national interests."^[44] By 1930, mostly due to the Rivers and Harbors Acts in 1925 and 1927, water programs changed from single-project approaches to multiple-purpose projects focused on optimum use of the *entire* river basins.^[45] In 1933, President Roosevelt created the National Planning Board (later, National Resources Board), as a piece of his New Deal program, which encouraged state-established regional agencies to assume leadership in addressing local, state and federal welfare. ^[46] The federal government became increasingly vested in public health and pollution abatement; by 1936, 8,000 communities in the United States repaired their sewage and waste systems with Works Project Administration assistance, amounting to nearly \$1.2 billion in aid.^[47] However, several water pollution control bills failed in Congress during this period as well. The most significant failure was the "Barkley bill" by Senator Alben Barkley of Kentucky, which would provide a framework for future legislation.^[48] This appeared to be a significant turning point in strategic method of dealing with problems of water pollution that affected entire regions.

In 1934, the Cincinnati Chamber of Commerce established a subcommittee, the Stream Pollution Committee, under the leadership of Hudson Biery.^[49] Biery had a new vision for pollution abatement in the Ohio Valley region and sought to create a forum for regional co-operation in pollution control to alleviate the problems faced by Cincinnati and other cities along the river.^[50] Rather than emphasizing the abilities of the federal government to subsidize pollution, Biery's proposed organization's members would work together in creating fair and uniform standards, designing and supporting the passage of legislation, and combining their policing powers of the states to address the problems.

The Cincinnati Chamber of Commerce's Stream Pollution Committee brought together forty civic and technical leaders from a variety of backgrounds: sanitary engineers, industrial leaders, civic association representatives, Department of Health officials, construction engineers, bank officials, President of Real Estate Board, and life insurance executives.^[51] The subcommittee created three main project groups under the assignments of legislation, research and planning, and federal emergency and relief activities to address different aspects of the Ohio River pollution problem.^[52] Nevertheless, all were united under the belief that "the streams of the Ohio Valley were not intended to serve as sewers and that they should be restored to the proper use in the fields of Public Health, Conservation, Commerce and Recreation."^[53]

In the *Engineering News-Record* in 1935, Mr. Streeter asserted, “the principal obstacles now standing in the way of an intelligent and comprehensive program of river sanitation in this drainage area [referring to the Ohio River Basin] appears to be legal and administrative, as the necessary engineering data are fairly complete and well established.”^[54] Cincinnati ran into problems because no enforcement by the federal government existed for municipalities and industries to update their treatment systems. Being towards the middle of the river’s flow, Cincinnati dealt with not only its waste but that of West Virginia and Pennsylvania as well. If industries and cities spent the considerable amount of money required to create and update treatment facilities, in a highly competitive environment, they feared that it would put them behind others, who did not feel it was their obligation to treat waste before sending it down the river. Without equal pressure on all industries and municipalities to keep high standards, there was little motivation for cities to spend funds on treatment when it could be used for more popular endeavors. As an article in the Cincinnati Post asked, “if one city did it, what good would it do if the town upstream was using the river to get rid of its sewer?”^[55]

By June 1935, the Chamber of Commerce president and editor of the *Cincinnati Enquirer* who was interested in the pollution of streams, William F. Wiley, successfully convinced leaders in legal, governmental, sanitation, and industrial affairs to join the Stream Pollution Committee. The Committee consisted of big names such as Robert A. Taft (a future senator), Myers Y. Cooper (former governor), Walter Schmidt (president of National Association of Real Estate Boards) and Alexander Thomson (president of the Ohio Chamber of Commerce and chairman on the board of the Champion Paper and Fiber Company). Unlike the other groups in the Ohio Valley concerned with pollution control,^[56] whose approaches were usually too localized or parochial, Biery’s committee sought to attack the wider issue on a regional scale, as done for phenol wastes, with a three part program of action on local, state and national levels.^[57]

On the local level, the Stream Pollution Committee encouraged public support for city bonds and municipalities to seek federal aid for the construction and maintenance of sewage treatment facilities. At this time, grant-in-aids were offered for public works projects, and this was a popular avenue to secure such funds. For Cincinnati, this meant arousing action from the city and its twenty-four adjacent communities in Hamilton County by publishing reports, such as that of the Cincinnati Association, which documented the poor conditions and the potential risks of stream pollution to public health, and articles in newspapers. A variety of activities were important as well, and the committee encouraged boating clubs to provide “sewer tours” that took the public to sites that spewed untreated sewage directly into the river. At the state level, the committee’s mission was to campaign for an interstate compact among the states in the Ohio River Basin, which granted the power to punish violators. On the federal front, the group sought to introduce legislation that would facilitate this basin-based stream pollution control, such as the Barkley- Vinson bill that was introduced in 1937 to the Rivers and Harbors Committee of Congress.^[58] All three fronts were viewed as equally critical to gain widespread support for drastic pollution relief programs and legislation.

Creation of the Ohio River Valley Sanitation Compact and Commission

Creating a compact and forming an organization that would appeal to and satisfy all states within the Ohio River Valley would prove to be a complicated and difficult task for the Cincinnati Chamber of Commerce. How would a single agreement and commission be effective and assure all states and interested parties, from industry to specialized recreational groups, receive fair representation?^[59] Also, to what extent should or could the federal government be involved? How would the commission implement its decisions? While these were the big questions for Biery and the Chamber’s Stream Pollution Committee (generally referring to itself as the Ohio River Valley Sanitation Commission by this point), other questions would arise over the details, from the language of the compact to what standards, if any, should be specified within the agreement.

Local interest groups, individual municipalities, states, and industries had very different positions regarding how the pollution in the Ohio River could and should be curtailed. In general, while seeking the backing of the federal government, the states wanted to remain sovereign in pollution control measures. Industry largely agreed with states, but usually rejected the idea of an interstate agency, based on the belief that their individual state would have industry’s best interests in mind. Conservation groups like the Izaak Walton League, on the other hand, believed that federal control was the only solution to truly tackle the problem of pollution in and along the Ohio River.^[60] All of these various points of view contributed it to over a decade of efforts before eight states in the valley signed a finalized compact, the Ohio River Valley Sanitation Compact, in 1948. Hudson Biery managed to successfully refuel a fire against water pollution in the Ohio River Basin and across the nation that was initiated as early as 1908, but the Cincinnati movement had a very different vision and method than those that proceeded.

Biery managed to obtain the best available legal talent in the city to aid in the drafting of an interstate agreement and complementing legislation. The legislation subcommittee, headed by lawyer Mr. Robert A. Taft, quickly got to work in 1935, following the advise of the Roosevelt’s new National Resources Board (NRB). Director of the NRB, Charles W. Eliot, encouraged the Chamber of Commerce committee to go ahead and draft an interstate compact, possibly informed by the one underway by New York, New Jersey, and Connecticut for pollution control in New York Harbor. Informed by their exhaustive study of existing laws and interstate agreements, the Chamber of Commerce drafted multiple bills with the purpose of curbing pollution of navigable waters. The Chamber decided to these drafts with various governmental departments, such as health departments, engineers, and planning groups, and requested their feedback.^[61] By 1936, the U.S. Congress gave the states permission to enter into such a compact proposed by the Cincinnati Chamber of Commerce. Within a few months, Ohio’s Governor, Martin L. Davey, began to request governors of other states in the region to get involved and join the committee to finalize an interstate compact.^[62]

The Ohio River sanitation group, centered in Cincinnati, envisioned an interstate agreement based on widespread *regional* concerns on an unprecedented scale. No prior interstate compact in the United States aspired to bring eight or more states together for unified self-regulation. Nevertheless, the Chamber of

Commerce could not ignore similar successful interstate agreements involving the shared resource of waterways. The Chamber analyzed a multitude of interstate agreements in the creation of what would be known as the "Ohio River Valley Sanitation Compact," such as the proposed agreement between New York, New Jersey, and Pennsylvania over the Delaware River.^[63] However, the final draft would resemble the 1935 agreement between New York, New Jersey, and Connecticut concerning the lower portion of the Hudson River more than any other; it liberally employed phrases throughout the written agreement.^[64]

Both Hudson River and Ohio Valley agreements focused on the "increasingly serious pollution" that constituted a "grave menace to the health, welfare, and recreational facilities of the people living in such basin [or area, in the case of the Hudson River agreement] and [was] occasioning great economic loss." In addition, each attributed the pollution issue to the rapid increase in population, yet only the Ohio River agreement mentioned the growth of industrial activity as a source. The Ohio Valley and Hudson River agreements also required signatory states to pledge "faithful cooperation in the control of future pollution" and to "enact adequate legislation." Bathing and recreation were important concerns in each agreement. However, the Ohio Valley treaty significantly differed in that it was more open ended and vague concerning the specific aspects of the environment it attempted to protect and minimum standards.

The most significant difference between the treaties existed in the particulars regarding the general environment. The Hudson River treaty was more detailed than the proposed Ohio Valley Sanitation Compact, mentioning the "major fish life, shell fish, and marine life" and the prevention of "oil, grease or solids from being carried on the surface of the water."^[65] This difference caused much debate among the committee members.^[66] However, drafters believed it was more important to get the compact in place, as more ambiguous requirements may create more support in upstream states like Pennsylvania, and worry about these details at a later date.^[67] In addition, this broad agreement provided flexibility, which would possibly avert the problems of deeply rooted and outdated minimum standards in the future.

With a fairly development agreement draft, Hudson Biery reached out to find allies in his crusade against stream pollution. He joined his efforts with those of the Ohio Valley district chairman of the National Water Resources' Committee's, a subcommittee of the NRB. In 1935, the chairman, Alfred Bettman, brought together representatives from the district, which included Ohio, West Virginia, Kentucky, Indiana, and Pennsylvania, who showed interest in the water pollution issue to discuss the potential creation of a Regional Planning Authority that would address problems regional in nature. In his opening statement, Bettman explained why he asked this group to meet:

River Pollution is the most pressing problem of the Ohio Valley. Much has been done on it. It furnished the motive power out of which this meeting has grown, but that is not to be construed as the ultimate objective... We know that we have different political areas- that the nation has its particular sphere of activities and the state its particular sphere. But, our problem could not be solved solely by state or by national actions because the geographical features involved have furnished us units which do not correspond with either state or national units. We call these units 'regions.' One thing before us, challenging our intelligence as a nation, is how to arrange, within the constitutional frame-work of that nation and of the state, for regional activities. I hope we may create out of the activity resulting from this meeting one possible answer to that.

While the Tennessee Valley Authority offered one answer to regional planning, that of handing all power and authority over to the Federal government, Bettman believed states could tackle issues together, without relinquishing power the federal government.^[68] His view of wider comprehensive planning fell right in line with Biery's mission. Biery used Bettman's group, and its subcommittee on stream pollution, as a means to disseminate knowledge concerning the Cincinnati Chamber of Commerce's accomplishments and plans, in hopes of also additional gaining support. Although it seemed that great interest was surmounting in the interstate agreement, it would not be an easy journey towards the signing and implementation of the Ohio River Valley Sanitation Compact.

Although Congress gave states permission to enter into an interstate compact in 1936 and approved the resulting document in 1940, it took until 1948 for a finalized compact to be signed by eight states.^[69] The states downstream, Ohio, Kentucky, and Indiana, had little to lose and generally endorsed the compact by 1940. States upstream, specifically Pennsylvania, had a more difficult time approving the interstate compact. Even the Pennsylvania State Department of Public Health rejected the compact, claiming, "there is no doubt that a burden will fall upon Pennsylvania and the Pittsburgh area for the benefit of the downstream cities."^[70] This resulted in Ohio and West Virginia establishing the condition that neither state would allow the agreement to go into effect in their states until Pennsylvania accepted it, "inasmuch as little can be done effectively by the two states without Pennsylvania's cooperation."^[71] Later, West Virginia placed another provision on the compact, requiring that Virginia would also enter the agreement. It would not be until 1940 that the stage would be set in Virginia to introduce the compact to its legislature.^[72]

Another obstacle was citizens' and recreational groups; the Izaak Walton League and other sportsmen did not endorse the interstate agreement proposed by Biery and the Cincinnati Chamber of Commerce, asserting that the agreement was biased towards business.^[73] Understanding the ability of the Izaak Walton League to sway public opinion, Mr. Waring of the Ohio Health Department and Biery attempted to ensure they did not provide the organization with ammunition to attack Cincinnati, the Barkley bill developments, and the interstate company.^[74]

Cincinnati did not let these obstacles regarding the Ohio River Valley Sanitation Compact delay waste disposal reform on the local front. Rather, the city spearheading the Ohio River pollution crusade believed it needed to serve as a model neighbor river city. The Stream Pollution Committee took on a timely campaign one year after the city was reminded of the power of the river with the massive and unparalleled 1937 flood.^[75] In 1938, a one million dollar bond issue for sewage treatment was introduced for voting in November. The Committee campaigned for the bond under the slogan, "Let's take the dead hoses out of the water," based on the calculation that the amount of sewage from Cincinnati was equal to one dead hose floating past the city every two minutes.^[76] While it was understood these new treatment facilities would only take care of a small portion of the river pollution problem, the committee believed local action would stimulate

regional co-operation. The day following the passage of the bond, November 9, 1938, an article in the *Cincinnati Times and Star* stated, "Cincinnati now can show the other states that this city means business and calls upon them to do their part."^[77]

In 1940, consistent with his other public education attempts, Hudson Biery continued to recognize the power of additional citizen support. Although newspaper writers were invited to every meeting to increase public support for the commission and the sewage treatment bond was successful, Biery stepped up his program of public education by participating in an interview with WLW Radio.^[78] In the interview, he left out none of the gruesome details concerning the Ohio River:

Into this pool the sewer of Cincinnati and other cities on the Ohio side of the river dump about 100,000,000 gallons of raw sewage every twenty-four hours... Much of this sewage is liquid but engineers estimate it includes 450 tons of solid material, principally human excrement, and all the other forms of waste that people dump into sewers. Someone has suggested that this 450 tons of solid material would be equal to dropping a dead horse into the Ohio River every two minutes all day and all night year in, year out.^[79]

When asked how much longer this water can be this severely polluted and continued to be used for consumption, Biery informed the interviewer that "engineers do not know how much longer it will be possible to keep the water safe... In the last two years we have had periods of a month at a time when the water contained more than five times the safe limit." Although Biery made this effort to get the word out about what was being done to combat stream pollution and encourage individuals to support the compact and the Barkley bill going through Congress, this interview did not have the effect he wanted it to; Biery's interview was "deleted considerably by the censor of WLW, who fear[ed] a wave of public hysteria if all the harrowing details were broadcast."^[80]

In the 1940s, action on the regional front concerning the Ohio River Valley Sanitation Compact stagnated. In the years of 1939 and 1940, the states of Indiana, West Virginia, Ohio, New York, Illinois, and Kentucky adopted the compact.^[81] However, without Pennsylvania's signature, the states were not able to fully implement the compact, due to provisions put into place by the Ohio and West Virginia legislatures.^[82] The Second World War can be greatly blamed for the delay in the early years of the decade, but the postwar public works construction programs renewed interested in Pennsylvania's legislature to join the interstate compact.^[83]

In 1948, the same year as the passage of the Federal Water Pollution Control Act that would backup the Ohio River agreement, Pennsylvania's legislature finally agreed to join the compact. On Wednesday, June 22, 1938, the governors of Ohio, Indiana, Kentucky, West Virginia, Virginia, New York, Illinois, and Pennsylvania gathered in Cincinnati for a ceremonial signing of the Ohio River Valley Sanitation Commission.^[84] The Commission was praised as a model by many for several decades, even the American Society of Civil Engineers referred to the agreement in 1963 as "the most effective large-scale water pollution program ever undertaken in the Western Hemisphere."^[85] Even those who had not fully supported the Ohio River Valley Sanitation Commission from its inception agreed it was a great starting point for addressing the problems the Ohio Valley experienced for at least half of a century prior. A 1949 article in *Sports Afield*, a magazine for fishing enthusiasts, stated, "it is a surprisingly strong compact, and amounts to pooling the police powers of the eight states to enforce the rules of the group. It isn't ideal, but it's more than the Ohio basin ever had before. It's like the new National Pollution Act, an opening wedge against pollution, not a final solution... The Ohio River compact is realistic, making the most of what gain it has secured."^[86]

Conclusion

By the beginning of the twentieth century, the Ohio River began to lose its prominent role in Cincinnati. However, the city still valued the river and attempted to hold on to its profound relationship. By the 1920s, the Ohio River the city once knew was completely transformed due to an increasing focus on predictable river navigation and the booming use of the waterway as the primary industrial and municipal waste disposal for at least eight states. Due to its location downstream, Cincinnati was at a disadvantage. However, no single city of state could effectively curb pollution or clean up the river on its own. Therefore, solutions to the problem tended to look toward the federal government for support and guidance. These efforts, though, typically only address single sources of pollution, rather than the problem in general, and were chiefly unproductive since states were commonly unequally invested in the problem solving process.

It was not until 1934 that a successful and thorough resolution arose out of an organization formed by a group of elite businessmen in Cincinnati. The Cincinnati Chamber of Commerce successfully demonstrated to the city's neighbors that its plan for an interstate compact would be the final answer to the beginning of finally tackling the entire Ohio Valley region's water pollution problems. In June of 1948, eight states were the first to sign the official Ohio River Valley Sanitation Compact, which combined the states' policing powers and financial resources to deal with the river's pollution amongst the states. The majority of power resided within the states, and the federal government was not heavily involved beyond some technical and financial assistance.

While the Ohio River Valley Sanitation Commission has undergone a significant development since its official implementation in 1948, it remained to be an important entity in the remainder of the twentieth century and still exists today. Currently, the commission is responsible for setting wastewater disposal standards, monitoring the river through its world-renowned monitoring system, and conducting research and surveys along the river.^[87] If or when there is a spill in the river, the Ohio River Valley Sanitation Commission is one of the first governmental agencies to respond. It is remarkable that a citizen group of elite businessmen in the mid-twentieth century managed to devise a governmental organization with lasting impacts and the ability to stand the test of time for at least seven decades.

- [28] According to Chief Engineer Waring, this was due to poor financing, as cities had difficulty finding funds to create and maintain such works. ("The Water Supply of Cincinnati"); Around 1907, the water intake for Cincinnati was relocated to a point on the Ohio River 8 miles above the city and about .75 miles above where the Ohio River meets the Little Miami River. This water was pumped into two large reservoirs that held about 340 million gallons, or six days' worth of water. It was assumed because of the size of the reservoirs that natural processes would separate out most of the silt and bacteria from the water; therefore, the reservoirs would only need to be cleaned every four to five years. - [33] The 1910 study of Cincinnati resulted in the adoption of a new general sewage system plan by the State Board of Health in 1913. The health board divided the metropolitan area into three concentrated sewage treatment and disposal flows. These three were the Duck Creek area (drained a portion of Cincinnati and Norwood that laid north and east of the tributary to the Little Miami River), Mill Creek District (drained the western and northern portions of Cincinnati, as well as several surrounding suburban communities), and the area around the Ohio River (constituted most of the downtown Cincinnati), which directly drained into the main stem of the river itself.[33] By 1932, the Duck Creek interceptor and most of the Mill Creek interceptor were completed and in service. [33] However, no work began on the Ohio River interceptor and all three lacked *permanent* sewage treatment facilities; Plans for temporary sewage treatment plants were in the works in the Little Miami Valley to address the Duck Creek area and near the mouth of Mill Creek for partial treatment of the Mill Creek wastes. A couple pump stations were planned for the Ohio River District downtown also, which moved the flow to the temporary Mill Creek treatment works. A discussion even took place regarding moving the Ohio River interceptor downstream to the Great Miami River. This would take the pressure off of the downtown area and, instead, move the wastes generated outside of the most important and productive portion of the city.

I think we as a nation are forgetting what the environment, in terms of pollution, was like before environmental laws were enacted and enforced. At the same time challenges to the environment persist as the population increases and residential, industrial and agricultural activities impact the environment. Advances that have been made will not continue without continued enforcement.

ORSANCO has not made its case that standards in every state at least meet its standards. Since the water and the impacts on it are shared between states it makes sense to me that a regional group oversees it, and not just to do testing and monitoring.

I hope ORSANCO continues to help us have clean Ohio River water for drinking, wildlife, and recreation.

Aug 20, 2018

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

nicolas estevez

Subject: Ohio river comments
Date: Monday, August 20, 2018 9:55:23 AM

Water is the crux of life, and our clean water supply is challenged at every point along the way, from the coal mines in the mountains to the delta basin. The Ohio river has many industries along its banks, and many people along the way are dependent on Ohio river waters. Not caring about the cleanliness of our water supply is stupid and inexcusable. Are we more interested in limiting expenses for those that pollute or are we more interested in keeping a population healthy? The fact that this issue has been raised suggests that some are more interested in corporate well-being than they are in their own well-being.

Please make decisions that will support our people. It is they, after all, who keep those industries running.

I can't believe we even have to discuss this. It should be standard policy to protect our water.

To whom it may concern:

Unpolluted drinking water is essential to the health and very existence of everyone who lives, including those of us who rely on the Ohio River for our water.

I have lived in Evansville for most of my 68 years, and I can tell you the water quality here has improved greatly from what it was like in the '70s. That is almost solely the result of increased regulations and more oversight by a variety of agencies, including yours. If you think we can trust the EPA and state agencies alone to do the job of protecting our drinking waters, think "Flint, Michigan."

Please don't abandon us, the millions of folks who live along the Ohio River. Please continue to protect us.

Thank you for all you've done -- and all that you will do -- for us.

Gratefully,
A. C. Nellis

As a citizen of Indiana and the USA, I strongly urge ORSANCO continue to maintain its pollution control of the Ohio River standards. I love that it's standards are higher than the EPA, especially since so many of past policies are being reduced or eliminated. Please do not give up control and oversight.

Subject: Roll back of Ohio River Quality Standards
Date: Monday, August 20, 2018 10:15:00 AM

I am very against moving forward with taking away oversight of standards on river quality and allowing state governments do as they wish.

I am very much for continuing were we are with quality of the river water and habitat and to keep raising the bar of what the standards should be.

Ever increasing the quality of the Ohio River should be the goal, (making standards tougher for better water quality should be direction along with better oversight and enforcement without increasing personnel count and costs) and by getting rid of the quality standards that tie all states/cities/counties responsible I believe will cause the river to revert back to 1948 levels

I do not believe without “oversight” from one organization with common goal and set of standards that “all” parties will perform required duties per set standards, (this is played out over and over in state and local governments as well as national government, need to have a balance and check in place)

This feels like a organization that wants to shed its responsibility to the people due to tightening control on spending

Subject: Do Not Remove Pollution Control Standards
Date: Monday, August 20, 2018 10:17:13 AM

To the folks at ORSANCO,

My understanding is that the goal of your commission is to reduce pollution in the Ohio River, my family's primary source of drinking water. I am certain that you take your responsibilities very seriously, and I am grateful for your hard work on behalf of all Kentuckians.

I disagree with your recent decision to stop regulating pollution control in the Ohio River. If anything, we need more rigorous control and less pollution in the river. As it is, raw sewage goes into our source for drinking water and in my opinion that is simply unconscionable. We clearly need more rigorous standards than those imposed by the Clean Water Act if this act deems it acceptable for sewage to go into drinking water.

If you have questions, I can be reached by phone at 502.939.0390 or via mail at 207 North Birchwood Avenue, Louisville, KY 40206.

Sincere thanks,
Jennifer Beasley

To: PCS@orsanco.org
Subject: Preserve and augment Ohio River pollution control standards
Date: Monday, August 20, 2018 10:24:24 AM

Dear ORSANCO,

My name is Bryan Georgilis. I live 5518 Davies Place in Cincinnati, Ohio. My zip code is 45227. My drinking water comes from the river and I depend on you for the safety and cleanliness of that water. I'm alarmed to learn about your proposal number two according to which you may abdicate your responsibility to set adequate standards for pollution controls and water treatment along the Ohio river. I implore you not to abdicate your moral and institutional duty to maintain such standards.

Your failure to continue setting pollution control standards will be unacceptable because state-level standards are inadequate. The several states who have authorized you to do this work rely on you to assume and the financial burden that it entails. They rely on you for uniformity of action and language so that standards along the Ohio are meaningful and effective. They rely on you to prevent interstate conflicts regarding water rights and pollution controls. Downriver states and cities like my own rely on you to protect our water from upriver pollution.

Removing ORSANCO pollution control standards is clearly in conflict with the public interest. It will be a gross failure of your moral duty and of your institutional purpose. Giving preference to polluting industries over the human people who depend on you and on the Ohio for their well being may lead to higher profits for a few, but at a great cost to many. Its costs will be greater than its savings and those costs will be mine to bear. The profiteers whom your abdication will serve do not deserve their surpluses at my great expense.

Sincerely,

Bryan Georgilis

Date: Monday, August 20, 2018 10:31:39 AM

In no uncertain terms I strongly urge that the existing ORSANCO water standards NOT be abandoned; that the line be drawn here in the sands of the Ohio River!

Don't allow Washington DC (Trump's EPA), our states (see Michigan), or companies (\$\$\$) who don't want to pay for their pollution roll back these standards.

The Fed and states can oversee, but let us also continue to stand watch here on the banks of the Ohio. We want a less polluted Ohio River for our descendants.

KEEP THE STANDARDS! Donald Edward Waters, 406 Cannons Lane, Louisville, KY, 502-893-3351

To: PCS@orsanco.org
Subject: Pollution Control Standards for the Ohio River
Date: Monday, August 20, 2018 10:32:23 AM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Subject: Public Comment on ORSANCO Standards
Date: Monday, August 20, 2018 11:19:54 AM

To the Board of Commissioners-

As an employee of a state government, that of Massachusetts, I work daily with other offices to ensure that often redundant functions are carried out in tandem with Federal agencies. I have found, particularly within the context of the last couple years, that even when it has been tasked with the most stringent functions and standards, the Federal government have been mired funding shortfalls which prevent offices from effectively carrying out their respective mandates. This is where keeping similar standards and functions at a state or regional level can benefit its residents.

For example, for the past 6 months I have worked for a small state agency known as the Donahue Institute for Governmental Services, to coordinate with municipal and state government to identify new developments for the 2020 Census. The people we work with at the Census are competent professionals, however they have been given significantly fewer resources in the last 10 years due to austerity policies. Because of this, in contrast with the ingenuity of the [tabulating machine](#), an early computer developed this task in the 1890 census, for Census 2020 we have been given software (GUPS) that regularly does not work for basic address updates. Because of this, our state has needed to create our own duplicate software procedures for 2020 geographic updates-- and without our redundant mission, there are tens of thousands of new addresses which would likely go uncounted. I understand that the Census has nothing to do with environmental protection, however I am familiar with the clean water protections from my degree in environmental science, and I feel strongly the aforementioned anecdote demonstrates how state and regional partnerships serve as fail-safes for identical Federal government missions.

Given the recent history of this administration's EPA, you would open your people and your economies to greater risk if such standards were left entirely to the Federal government alone. There always remains the unfortunate reality that agencies like the EPA are simply not allocated resources to enforce their own mandates. I believe this is a concern that will extend beyond the duration of this administration, given the priorities of discretionary spending in the last 15 years. If you would like me to clarify these comments further, you may reach me at this email address.

Respectfully yours,
Ken Lefebvre

Subject: Clean Water Standards
Date: Monday, August 20, 2018 11:20:33 AM

ORSANCO,

I read an article in the local newspaper regarding ORSANCO's proposal to drop clean water regulations.

This causes great concern.

Living in Henderson, Kentucky, I often can smell and taste pollutants in our drinking water.

Millions of people drink from the Ohio River, essentially an industrial and sanitary sewer. We drop out the visible sediment, and add some Chlorine in a treatment plant, then "call it good".

The Ohio Valley has the highest Cancer rate in the country and I believe that our drinking water is a key component.

The ORSANCO proposal places complex chemical science and public safety in the hands of politicians and lobbyists. This is dangerous and will no doubt lead to paid lobbyists seeking soft spots in state legislatures and in individual state regulations.

The Ohio River is shared by Millions of people in multiple states and those downstream must drink whatever is flushed, dumped and poured down the drain upstream.

We definitely need ORSANCO to monitor and regulate the entire watershed.

Please add my comments to this debate.

As a Kentucky citizen and a recreational user of the Ohio River near my home, I am writing to express my opposition to ORSANCO's proposal to eliminate numeric pollution standards (option 2). ORSANCO's PCS are not redundant because they are often more protective and clearly, the Compact has not yet achieved its ultimate mission, to restore and maintain the health of the Ohio River. My recommendation is to shelve the current proposal and maintain the status quo.

Thank you for the opportunity to comment,

Betsy Bennett

I love Louisville tap. I've become a water snob. Everywhere I travel water just doesn't taste as good. I love that I live in a place where I know my water is safe to drink. And I know it depends on the good work that the ORSANCO does. As the President continues to undermine decades of work to protect the environment, now more than ever we need organizations to regulate pollution control. Please consider the important role your organization plays in protecting the Ohio River.

Please do NOT reduce the pollution standards for the Ohio River!!! Animals and wildlife depend on it. People fish and boat in the water for recreation. Please DO NOT do anything to reduce the environmental standards we need to hold ourselves to. In the state of the environment today, we need stricter standards, not more lax ones.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Rita Gagliani

Subject: Do not repeal water quality standards for the Ohio River
Date: Monday, August 20, 2018 11:59:40 AM

I am in favor of retaining the ORSANCO water quality standards and I am also in favor of states adopting more stringent standards if they so choose.

The purpose of ORSANCO is to coordinate and cooperate among the states so it seems absolutely necessary for ORSANCO to maintain a baseline recommended standard that ensures clean water for biological health and recreational uses of the river.

There are instances where ORSANCO's standards are more rigorous than those that have been adopted by the individual states, and so it seems obvious that the ORSANCO standards are serving an important purpose and should not be repealed!

Subject: ORSANCO Standards - Keep Them!!
Date: Monday, August 20, 2018 12:08:04 PM

We find ourselves now in a time when standards at the federal and state levels are being repealed and reversed almost daily. It is important that the source of the drinking water for many is kept safe and acceptable, and the ORSANCO standards have done an excellent job of that. IF, and that is a big if, the federal/state standards are/or remain higher than the ORSANCO standards, then ORSANCO is simply an extra safety monitor of the water quality and the prevention of dumping into the source. IF, and that is a very likely if, the federal Clean Water Act standards set by EPA or state standards are lowered, as other standards have been recently, then the ORSANCO becomes the higher level standards to enforce keeping our drinking water safe from the dumping of pollutants and other things that would reduce the safety of our drinking water and make it more difficult to make that water safe by removal processes.

Our water comes from Mt. Washington, which comes from Louisville, which comes from the Ohio River. Please do NOT give away the authority to step in and protect our water if the federal/EPA or the state(s) abrogate their responsibilities. Keep ORSANCO intact for our future!

Subject: ORSANCO should retain its regulatory authority
Date: Monday, August 20, 2018 12:14:46 PM

We need to preserve local regulatory authority for our natural resources. The Ohio River basin is no exception.

Please do not strip ORSANCO's powers. I want to feel safe knowing what is in my drinking-water (more or less) and would like to be able to use the Ohio recreationally - I fear that decreasing ORSANCO's powers would hinder both of those purposes.

When it comes to local resources, it is not acceptable just to leave issues to the federal government; the feds should pass minimum standards and local authorities should be free to increase regulations as they see fit to protect their constituents and the resources they oversee.

Thank you,
Haylee

I was distressed to hear that ORSANCO is considering no longer setting water quality standards for the Ohio River. EPA standards, I have read, are less stringent in many cases than those set by the commission. There is never a good time to allow more pollution. Shareholder value of polluting corporations should not trump the public interest. This administration has quite decidedly signaled that it plans to weaken environmental regulations across the board. Do not participate in that project.

Subject: continuing ORSANCO water standards
Date: Monday, August 20, 2018 1:00:21 PM

Dear commissioners,

I live with the three daughters I adopted from foster care in Newport, Kentucky, just blocks from the banks of the Ohio and Licking rivers. Living on a border means I know the importance of consistency across jurisdictions and living with children with special needs means I understand the need to do what we can to protect and improve the future. By maintaining ORSANCO's standards and structure, we have the opportunity to do both. I live in one of the poorer states along the river and I don't want my elected officials to use that as an excuse to not focus on river safety if pollution control reverts to them. I want the people downstream to get the same quality of life and river safety that I do, and in fact I want it to be better for all of us. I want my children to be able to keep growing up like they have been, able to walk to the floodwall for a picnic or cross the bridge to Ohio for a birthday party at a riverside park like we did for my 12-year-old this summer. I want our drinking water clean and safe. I believe the only way to maintain and improve on what we have now is to keep ORSANCO strong and functioning. We all deserve it.

Thank you.

Subject: COMMENT on proposal to eliminate ORSANCO water quality standards for the Ohio River
Date: Monday, August 20, 2018 1:09:17 PM

NO.

A Republican-controlled US Environmental Protection Agency CANNOT BE TRUSTED to maintain adequate water quality standards or to require the Ohio River Watershed States (several of which are also controlled by Republicans) to adopt and implement them in the tributary streams to the Ohio River. The Trump EPA in particular has already proposed repealing Final Regulations on toxic discharges, eliminating protection of headwater streams and wetlands under the Clean Water Act, and letting State and "local" agencies LIKE the Ohio River Valley Water Sanitation Commission (ORSANCO) take precedence in setting Water Quality Standards!

ORSANCO's mission is not limited to the whims of current (Republican-appointed?) directors, it is PERMANENT until the Ohio River waters are uniformly and safely swimmable, fishable and drinkable, and it predates the creation of EPA by decades. There are several TMDLs already developed by ORSANCO that have yet to be implemented by the States, and many more are still needed to meet the water quality standards for the Ohio River. ORSANCO's work is not yet done, and it won't ever get done if the current Directors abrogate that responsibility in order to allow a Republican-controlled EPA to remove the protections that were adopted nationally.

See Jon Devine's column for links to the actions of the Republican Administration EPA:
<https://www.nrdc.org/experts/jon-devine/clean-water-act-45-despite-success-its-under-attack>.

It seems that right now would be the worst time to have these standards go away. The EPA is being led by a person who has steadily removed any standards he can that protect the environment.

If all were moving along with attentive and determined enforcement of environmental standards we could see removing this “fail-safe” organization. But such enforcement is not a certainty right now, and if Federal rules go by the wayside, some states might decide to lower theirs.

Please keep ORSANCO!

Hello,

I urge whoever has the power to NOT repeal the pollution standards in place for the Ohio River. This river is already polluted, and we should be looking at ways to clean up this vital waterway and not loosen restrictions so dumping can increase. At what point does the preservation of our environment for future generations outweigh the motivations of corporate greed? It seems to occur less and less with the current administration, to nobody's surprise I'm sure. Please think about the environmental and ecological implications of repealing these standards. I hope you will decide to do the right thing for our community and future.

Thank you,
Alex Ochsner

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Robert Hammond

Please do not abandon your mission, which is to protect the Ohio River, which is bounded by many states. We cannot afford to leave that protection to each state which borders the river.

We remember the days when the Ohio was seriously polluted and we do not want to ever see those days again, for the health of all the millions of people who depend on the river. Our children and grandchildren live in Louisville, and our water in Shelby Country is piped here from Louisville.

We ask that ORSANCO continue to provide the oversight needed to provide the overall view and the comparative analyses needed for coordination, consistency and equity.

Surely that is what you would want for your family!

To Whom it May Concern:

Please do not abolish or even weaken the pollution standards. I know it is currently politically in vogue to rape and pillage our water supply, the natural resources and kill the wildlife in the name of greed. When all those things are gone what will you eat or drink? Pollution standards are our only protection against corporate over reach and exploitation.

To: Whom it may Concern on the ORSANCO

Please do not eliminate any pollution control standards. I am a lifelong resident of Evansville (63 years). I have retired from teaching in the EVSC after 34 years of service. Even though I love the city of Evansville I am concerned about higher incidences of cancer in our area. Even though I mainly suspect air quality I do not want to relax our water standards at ALL. I also hope that we can utilize our river location in many more exciting ways!

Thanks for your vigilance on this matter!

As a Kentucky citizen and a recreational user of the Ohio River near my home, I am writing to express my opposition to ORSANCO's proposal to eliminate numeric pollution standards (option 2). ORSANCO's PCS are not redundant because they are often more protective and clearly, the Compact has not yet achieved its ultimate mission, to restore and maintain the health of the Ohio River. My recommendation is to shelve the current proposal and maintain the status quo.

Thank you for the opportunity to comment,

Our family has lived on the banks of the Ohio River in Oldham County, KY for decades, so we have a very strong interest in this process. We can remember when the river was not as clean as it is today due to discharges upstream. Now the recreational value is much stronger for boaters and fishermen.

The Ohio River is a federal waterway and therefore should continue to be regulated under ORSANCO for consistency in appropriate standards among all affected states. Furthermore, the structure would allow a prompt and cohesive response should an Ohio River emergency arise.

Do NOT repeal this commission.

Thank you,
Mary Anne and Bill Arnold

As a resident of Evansville, Indiana, I strongly oppose the elimination of pollution control standards by ORANSCO. It is important to have this commission to back up and enhance the regulations provided by the EPA and individual states. Under the current administration, it is likely that the EPA will reduce standards significantly in favor of utilities and big business, and to the detriment of people, plants and wildlife relying on the river for water, food and recreation.

Please keep doing what you have been doing to improve the water quality of the Ohio. Extra monitoring alone will not do the job. It will only let us know when the lifting of standards has done harm.

Date: Monday, August 20, 2018 1:50:21 PM

To whom it may concern,

Three years ago, I had the privilege of moving to the beautiful landscape of rural southern Indiana, and am currently serving on staff at Hanover College, which overlooks the mighty Ohio.

In my time here, the Ohio has already been the home of toxic algae blooms, which has rendered the water dangerous for even a leisurely sporting activity. I applaud you for your efforts of regulation thus far, though implore that your powers of regulation remain in tact, as we have already suffered the consequences of pollution in the river.

I thank you for your consideration.

Subject: Protect the Ohio River, Too!
Date: Monday, August 20, 2018 1:52:04 PM

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

Gina Yohe

Subject: Ohio River pollution standards

I live in Switzerland County, Indiana, between Cincinnati and Louisville. The Ohio River is my back yard. We moved here for this river's resources, beauty, fishing, boating, wildlife, and peacefulness. I am very sorry to hear that Orsanco is wanting to eliminate its pollution control standards. please do NOT do this.

We cannot tolerate the degradation of the Ohio River, nor should it be considered. This river valley is a very important resource, and should be preserved, at all costs!

We see Eagles with increasing frequency the last few years. It is amazing that they are making a comeback. We saw them catching fish and eating. We see all kinds of migrating wildlife. If the river is degraded, we may lose all gains that have been made.

Ohio River provides drinking water to 3 million people, and 10 percent of US population live in the Ohio River Basin. That is 25 million people! There is a higher incidence of cancer, and illness along the River, from water pollutants, and industry that are burning coal and making steel.

During rainstorms, raw sewage is dumped at 1350 points along the River, not to mention urban run off, and agriculture. Personally, if I have so much as a scratch, I get infection from being in this River. I used to swim in it all summer!

Acid mine drainage in the upper basin, release sulfur and metals, and the River does not currently meet standards for bacteria, pathogens, PCB's lead, mercury. There are severe restrictions on consumption of fish, and no eating of catfish, or carp. We have prehistoric paddlefish, which are dwindling.

Camping and boating increases our County's summer population about 30 percent. Those visitors come to camp because the River. If they stopped coming, our town would lose a lot of "tourists" that are supporting our town's businesses.

Please do not reduce the restrictions! Our lives depend on the health of this river basin. The children that follow us should have this resource.

Do we really want to destroy our planet, piece by piece?

Why is this happening? Why are regulators now bowing down to the coal, chemical and other industrial polluters?

Apparently, no one really cares about the progress that has been made to make our waters and surrounding environment safer.

Without enforced regulations, the companies who pollute win. No one to regulate what goes into our water sources and into the air we try to breathe.

Look back to the sixties. Anyone remember Love Canal in western New York state? Without strict regulations, the area became a toxic wasteland. It took millions of dollars to clean up and in the end took many lives and livelihoods due to the carcinogens polluting the area.

Do we want the "Beautiful Ohio" to become another Love Canal?

Let's do the right thing and keep the regulations in tact despite the efforts of big money and the EPA to eliminate any sort of regulation.

To: PCS@orsanco.org
Subject: Pollution Control Standards Comments
Date: Monday, August 20, 2018 2:05:51 PM

Dear ORSANCO Commissioners,

My name is Kevin Hengehold. I live in Newport, Kentucky, zip code 41071.

I'm writing to ask that you retain and expand the Pollution Control Standards and not to enact Option 2.

The Ohio River provides drinking water for over 5 million people. Weakening the Pollution Control Standards would mean that all of the pollution regulations from ORSANCO would essentially become null and void, and the Clean Water Act would be the law of the land. The Clean Water Act has typically been a floor for regulations, with ORSANCO going above and beyond the federal law to better protect the region. To wit, as of 2015, there were 188 instances where ORSANCO set a standard for that neither a member state nor EPA had a standard for. And there were 252 instances in which ORSANCO standards were at least 10 percent more stringent than those of the member states or the EPA, including for arsenic, which can be found in waste from the burning of coal and is

known to cause cancer.^[1] Option 2 would be an unequivocal rollback of regulations, making the Ohio River dirtier and less safe for the people who live near it, play in it, and drink from it. The River's not in great shape; in 2015 it led the nation in pollution dumped into it by industry, and it received over 24 million pounds of discharge from industry in 2013.^[2] If ORSANCO were to abdicate its current responsibilities, each state would be left to decide how clean the river should be, with no regional response if the EPA were to loosen its provisions.^[3]

Moreover, weakening the standards means that coal-burning power plants will be allowed to continue operation longer than they otherwise should. There is a coal plant located every 38 miles along the Ohio River.^[4] Coal plants are the largest contributors of toxic pollution to U.S. waters, dumping metals such as mercury, arsenic and lead. Long-term exposure to these metals can cause neurological and developmental damage, harm internal organs, and cause cancer. The EPA has found that that power plants dump more pollutants, such as mercury, arsenic and lead, into our waters than the next nine industries combined. The heavy metals in the waste discharges can cause neurological and developmental damage, cause harm in utero, damage internal organs and cause cancer.^[5]

I won't mince words: coal is the enemy of the human race. It kills 15,000 people per year in the USA,^[6] and has a death rate per kilowatt-hour (kWh) 25 times that of natural gas and over 600 times that of wind energy.^[7] People of color are more likely to live next to a coal plant than white people, so these health effects are disproportionately affecting black, brown, and indigenous people.^[8] If all of the externalized costs of coal were internalized, it would cost roughly 27 cents per kWh, rather than the approximately 3 cents per kWh cost now.^[9] And this fails to account for the greatest cost of all, that of climate change. Coal has the greatest carbon footprint of any energy source currently used. According to the Stern Report, if the worst impacts of climate change are realized, we could lose 20% of our GDP per year, every year.^[10] Accompanying this GDP loss is increased human suffering, forced migration, lives ruined, and lives lost through heat waves, the intensification of storms through sea level rise, and the migration of bugs carrying lethal diseases. All of this human misery, suffering, and death is being suborned solely by the desire of a few rich individuals at the top of the coal companies to expand their wealth accumulation, no matter the

cost. It's morally repugnant, and you can help bring it to an end by voting to uphold and expand the Pollution Control Standards and to reject Option 2.

Subject: Fewer regulations?! Are you joking?
Date: Monday, August 20, 2018 2:10:48 PM

I had to look twice to make sure I wasn't hallucinating when I saw that there was talk on putting FEWER regulations on the amount of pollution being dumped into the Ohio. How can this even be a topic that's up for discussion in this day and age? If anything, we should have more/stricter regulations on what's allowed to be dumped into the source of our drinking water.

The fact that it is our source drinking water isn't even one of the main reasons I feel this way. I have confidence that the Water Company will make our water safe to drink. However, the fact that we have such a beautiful natural resource in our backyard and we're basically voting on whether we should destroy it even faster is just beyond belief, especially in this day and age. I plead that our law-makers and citizens will see what an absurdly bad idea this is and vote accordingly. We need to be doing more to protect our river, not less. Thank you for your time.

Subject: Keep ORSANCO's Pollution Standards!
Date: Monday, August 20, 2018 2:16:31 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Kathryn Davis

Date: Monday, August 20, 2018 2:17:03 PM

Aug 20, 2018

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

We need pollution controls that protects our natural environment, Th is what makes America great.

Subject: ORSANCO Pollution Control Standards
Date: Monday, August 20, 2018 2:30:20 PM

Hello,

I am writing to voice my opinion regarding the pollution control standards proposed by ORSANCO.

I hope that the compact takes into consideration the impact of pollution and other environmental issues on either the perpetuation or amelioration of social inequalities. Pollution in the river restricts certain populations' access to food, water, recreation, and other vital components of modern life. As an interstate compact, ORSANCO has the ability to provide justice to the people of the Ohio River Valley. Moreover, I hope that the compact will avoid the myopic thinking of our current political moment and do what is best for the region in the future.

Thank you,

Dustin Meier

Subject: Ohio River Pollution Control Standards
Date: Monday, August 20, 2018 2:36:53 PM

To Whom It May Concern,

I am writing this letter to provide comment in response to the ORSANCO proposed revisions to its Pollution Control Standards for Discharges to the Ohio River - 2015 Revision.

I understand that ORSANCO sets Pollution Control Standards for industrial and municipal waste water discharges to the Ohio River, and tracks certain dischargers whose effluent can seriously impact water quality. The standards designate specific uses for the Ohio River, and establish guidelines to ensure that the river is capable of supporting these uses. Although river quality has improved greatly, the river remains threatened by raw sewage discharges from combined sewer overflows during wet weather, urban and agricultural runoff and toxic chemicals and pollutants from companies with water pollution permits.

Presently, about two-thirds of the river, including Indiana and Kentucky, are not safe for swimming and recreational uses. The Ohio River has been the most polluted rivers in the U.S. for 9 years in a row, according to the U.S. EPA. The amount of pollution discharge into the Ohio River is more than double what industries pour into the Mississippi River, which ranked second. Mercury pollution in the Ohio River increased by more than 500% between 2007 and 2013, according to EPA data. Mercury is a potent neurotoxin that impairs fetal brain development and is dangerous to all of us. People who live along the Ohio River and rely on it for a water source are concerned about the hazardous waste that has made its way and continues to make its way into the river.

I believe that weakening or doing away with ORSANCO's standards would be a setback for river quality and by extension for the people and businesses that enjoy and rely on the river. It would lead to a patchwork of different standards for especially dangerous types of pollutants up and down the Ohio River. It is important to keep watch over this most valuable resource that is the Ohio River. We all must work together in a collaborative manner to ensure that our water quality programs are appropriated and meet the needs of the folks who use and depend on the river. I do not believe that this can be done without a coordinated effort and enforcement of the ORSANCO's standards.

Thank you,

Subject: Changes to pollution control in the Ohio river watershed
Date: Monday, August 20, 2018 2:37:38 PM

What I want to know is "how can anybody think that removing these controls is a good idea?"

I just returned from El Estor Guatemala, on the shores of Lake Isabel. They are in crisis because mining interests (in their case nickel) are polluting the lake. Without compelling rules a private enterprise will "dump" by products of their production into landfills. The argument could be made that without these rules it would irresponsible (to share holders) for a company to spend money mitigating the environmental consequences of such dumping. It is the role of government to lay down the rules.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Subject: Proposed changes
Date: Monday, August 20, 2018 2:50:02 PM

I oppose any change in ORSANCO's pivotal role in overseeing and regulating discharges into the Ohio River. It is critical that we continue to clean the source of our drinking water and assure a safe environment in which to fish, swim and boat. Continued cooperation between the states bordering the Ohio is unique and important. Regulation by those states with the greatest interest in water safety issues assures action to protect citizens who rely on this great waterway.

Subject: Comment on Orsanco proposal
Date: Monday, August 20, 2018 3:05:46 PM

To whom it may concern:

According to the Evansville Courier and Press, “Ron Riecken is owner of Inland Marina near Evansville. He has served on ORSANCO's public information advisory committee for 20 years but said he will resign if commissioners approve the change.” I agree with Riecken in his belief that “doing away with ORSANCO's standards would be a setback for river quality and by extension the people and businesses who enjoy and rely on the river”.....including the people who live downstream of us. Relying on EPA to create and enforce water quality regulation for the Ohio River is particularly dangerous at this point in time. It seems to me that the current director of the EPA has a history of undermining the very agency he heads. I think ORSANCO is in a much better position to moderate and protect the Ohio River.

I strongly disagree with the proposal to reduce ORSANCO’s regulations. Oversight of the water quality of the Ohio River should not be given to the EPA.

I am writing as former resident of Ohio, and frequent visitor to the Ohio Valley. I believe that ORSANCO should retain existing, strict pollution control standards. Clean water along the Ohio for tourism and recreation supports an important sector of the economy. Protecting local drinking water supplies from contaminants is also important. The more stringent standards of ORSANCO give the Ohio Valley a relative advantage to other regions of the country for tourism and development.

I hope that ORSANCO makes the right decision and maintains current, more stringent standards for water quality.

Sincerely,

Subject: NO on weakening/removing ORSANCO pollution control standard
Date: Monday, August 20, 2018 3:16:19 PM

Hello,

My name is Carl Wilhoyte and I live in South Euclid, OH on the east side of Cleveland. Removing or weakening pollution controls for public water sources would be a disaster for an area afflicted by tragic lead levels in our drinking water. Pollution controls do not need to be relaxed, but rather tightened and the cost to fix the issue placed on the polluters themselves. This is their problem, not the people's, and they must bear the cost of fixing it. If not, they should be made a public entity.

A powerful regional standard with enforcement must be upheld and expanded, as local Republican-led state governments will undoubtedly wish to weaken their state or local standards, threatening everyone in that area. Water knows no boundary, and pollution will travel regardless of the line drawn on the map.

This is a water-rich area, and it is your duty and obligation to protect the people that live here. File this letter under absolute opposition to removing any regional water pollution standards.

My full name/address:

Carl Wilhoyte
1236 Plainfield Rd
South Euclid, OH 44121

Thank you for your time. Do the right thing!

Subject: Water pollution control standards
Date: Monday, August 20, 2018 3:18:38 PM

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). If ORSANCO no longer sets water quality standards, then each state would be left to decide how clean the river should be. Please do not allow ORSANCO to abdicate its responsibility to protect the drinking water, recreational opportunities, and tourist revenue that the Ohio River brings to our great state. ORSANCO has a unique and settled opportunity to protect and improve water quality in the Ohio River Basin, in part by setting these standards for the maximum levels of various pollutants in the river. The standards are not an unnecessary regulatory burden, but rather provide certainty for regulated entities along the length of the Ohio River while providing protection of designated uses. According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the EPA lack. At a time when the federal government is eliminating or weakening environmental and public health safeguards, it is even more urgent that ORSANCO's pollution control standards remain in place.

I and other Kentucky citizens are grateful for ORSANCO's role in protecting the Ohio River. Stripping ORSANCO of its authority would weaken public confidence in this important Commission. And I am not alone asking for the current pollution control standards be maintained; drinking water authorities and utilities agree. They also understand the need for ORSANCO to set the standard for the entire Ohio River to protect the drinking water of 5 million people. Please do not take away ORSANCO's unique authority to protect the Ohio River.

To Whom It May Concern --

I am writing to express my concern that you, the commissioners of ORSANCO, might eliminate the pollution control standards for the Ohio River that are in effect to protect the water quality of the Ohio River for millions citizens of several states. I understand that you believe that the pollution control standards are a duplication of state standards, but since the Ohio River is a boundary river and runs through several states, I think it is necessary for an interstate agency to oversee the standards among all of the states. This agency can coordinate the standards and ensure that states are consistent in their enforcement of pollution control.

I understand that many of the staff members at ORSANCO oppose this move, and I wonder what is motivating you to consider eliminating something that is considered vital by those working to maintain clean Ohio River water every day. The standards are working successfully and have greatly improved the water quality of the Ohio River over the past fifty years. These standards have ensured that controls on pollutants that enter the river are at a level where water quality is safe for businesses using the water for production, for municipalities that use the water for drinking, and for all of the citizens who use the river for recreation.

I urge you to NOT eliminate the ORSANCO pollution control standards.

Thank you for your time and consideration.

Subject: Repeal of Ohio River Pollution Standards Comment
Date: Monday, August 20, 2018 3:26:56 PM

Hello,

I am writing in opposition to Repealing the Ohio River Pollution Standards. My understanding is proponents of repeal feel the Ohio River Standards are redundant with the EPA standards. While that may be true in part, the current administration cannot be counted on to maintain those standards, and may not feel as invested in protecting our natural resources as we should be ourselves.

I am one of the many Kentuckians that greatly enjoy the river system, and feel that its stewardship, and all of our natural resources should be a top priority for all of us. Industry and Industrial Agriculture, and others using our Rivers in Kentucky and other Ohio River states have a very poor record when it comes to the environment, especially with regards to discharge into our rivers. This must be carefully regulated and those that violate the standards should be held accountable for any breeches. It makes sense that those with the most at stake are the ones that should control these standards.

Please do not repeal or weaken the Ohio River Pollution Standards. Our rivers are one of our greatest natural resources. We must ensure that they are maintained and improved for all of us now, and for future generations.

Very Sincerely,
Scott E. Thile

Subject: Elimination of Multistate Pollution Control Rules for the Ohio River
Date: Monday, August 20, 2018 3:56:23 PM

To Whom in May Concern,

I am writing to express my profound displeasure at the proposed elimination of ORSANCO pollution control standards that apply to all of the states bordering the Ohio River. I am afraid that by eliminating universal pollution control standards that apply to all of the states bordering the Ohio River and allowing each state to institute its own rules will lead to vastly different standards and the impossibility of controlling the overall quality of the river. Since each state shares the Ohio River with a state on the other side of the river, analysis of who is responsible for the testing, analysis, clean-up, and regulation will become increasingly difficult. Who is to say who is responsible for the degradation of the river when it flows through many states if each state has different standards and a different system of monitoring and enforcing the rules.

Please reconsider your proposed changes. I urge you, instead to maintain ORSANCO's present standards and to do the utmost in enforcing these standards.

Thank you for your consideration.

I grew up in Louisville, I used to argue with people about how great our drinking water was. It is not lost on me how much the ORSANCO commission has done to improve and protect the water quality of the Ohio River. I am sure the job is not an easy one. Please do not stop setting pollution Control standards!

I think of my two young kids and the mess of environmental problem we are handling them. Unless you can say for certain that your decision leaves water quality in a better place than it was prior to any potential changes - than you can't in good conscious make decision. Please protect the body of water and thus the citizens who need you. Please do not abdicate your power and influence.

If ORSANCO no longer sets water quality standards, then each state would be left to decide how clean the river should be. Please do not allow ORSANCO to abdicate its responsibility to protect the drinking water, recreational opportunities, and tourist revenue that the Ohio River brings to our great state.

ORSANCO has a unique and settled opportunity to protect and improve water quality in the Ohio River Basin, in part by setting these standards for the maximum levels of various pollutants in the river. The standards are not an unnecessary regulatory burden, but rather provide certainty for regulated entities along the length of the Ohio River while providing protection of designated uses. According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the EPA lack. At a time when the federal government is eliminating or weakening environmental and public health safeguards, it is even more urgent that ORSANCO's pollution control standards remain in place.

I and other Kentucky citizens are grateful for ORSANCO's role in protecting the Ohio River. Stripping ORSANCO of its authority would weaken public confidence in this important Commission. And I am not alone asking for the current pollution control standards be maintained; drinking water authorities and utilities agree. They also understand the need for ORSANCO to set the standard for the entire Ohio River to protect the drinking water of 5 million people. Please do not take away ORSANCO's unique authority to protect the Ohio River.

Sincerely,

Sarah Reeves

Dear ORSANCO Commissioners;

I strongly support REJECTING the proposed changes to the ORSANCO Pollution Control Standards. After reviewing the proposed changes, I am shocked to learn that ORSANCO no longer wishes to protect the Ohio River, the millions of citizens that live, work and recreate along and in it, and the thousands of species that inhabit it.

I am concerned that ORSANCO Commissioners are playing politics with the health and livelihoods of over 25 million people. While I appreciate that ORSANCO's Executive Director is clear on the compact guiding ORSANCO. I think that his view that "ORSANCO would continue to work with its member states to make sure the designated uses of the Ohio River are met." is naively optimistic. Any of the extensive proposed changes to the Pollution Control Standards will have a deleterious effect on health, welfare, and recreation for the citizens living in the Ohio River Valley Basin.

I urge the Commissioners to REJECT the proposed changes.

Sincerely,

Scrutiny and regulation of pollution is crucial, and I believe ORSANCO should continue to set high standards and regulate (and reduce if possible) the pollution allowed to seep into the Ohio River, to help ensure the future health of my Louisville community and all communities impacted by the Ohio River valley ecosystem. Additional scrutiny and independent regulatory bodies are crucial in protecting our environment, and I strongly believe ORSANCO needs to continue to scrutinize and regulate pollution in the Ohio River.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

I would like to state my strong disapproval of the updated ORSANCO standard. I grew up in New Richmond, OH and spent much of my childhood around the Ohio River, so I am deeply concerned about the proposed changes to the standard as it will result in significantly reduced water quality. Many states rely on the ORSANCO standard and adopt the values as their own. Without this, the affected states will have to expend more resources to develop the requisite standards. Also, if an upstream state sets poorer standards, all of the downstream areas and other states will be adversely impacted. Removing these standards serves absolutely no public interest. These changes are clearly for the purpose of helping industry take advantage of the water and increase profits while leaving it dirtier for everyone else. I think it is also important to note that our drinking water comes from the river and the Greater Cincinnati Water Works opposes these changes as well.

Subject: Public Comments on Repealing Water Standards
Date: Monday, August 20, 2018 4:37:04 PM

Hello,

As someone who grew up in the 90's playing in the Ohio River in the summer, It's extremely important to me and to all who live here that we have high standards for our water quality. ORSANCO's mission is an important one and a safeguard against those who would abuse our public resource. Even though the Clean Water Act requires may overlap with many ORSANCO standards, we still need to be vigilant in case federal/state laws are changed. As a resident of Kentucky, I am well familiar with industrial companies receiving priority over residents' health and I confidence in our government to take residents' health seriously. ORSANCO stands as a safeguard against the day that state or federal regulations begin to loosen or slip and suddenly industry is allowed to completely overrun any thoughts for public health.

Please do not repeal these river protections that are so likely to be fickle if only dependent on state/federal government oversight.

Hello,

I am opposed to ORSANCO stripping itself of its regulation powers. With the president not allowing the EPA to have the much needed powers of regulation for the national, now is not the time to be lax on environmental regulations in general. Are they just feeling lazy over there and don't want to take the time to enforce the laws?!

Best Regards,

Eliminating the powers to regulate pollution control standards along the Ohio River is lunacy. Clean water is not only necessary to the health of Kentucky's current citizens, without clean water we will will never be able to bring business to this area other than enterprise that benefits from polluting our water. You MUST regulate and review the Clean Water Act. Other than possible lining of your own pockets, there is no reason for this. Your "position has been that we will let the public comment period reach an end, and don't intend to comment until a decision is made" is a total assault to your supposed roll of overseers to the energy needs of our citizens. I am appalled.

I like local control of many things. We can attempt and sometimes succeed in being local in everything we do as a consumer (as long as you don't count our cel phones or TVs or anything else made globally!) and as a community. i love Louisville more than anywhere for example, and i love the USA too - they are two loves that can be held together in my mind. It is not "either-or", it is "both-and". So we can continue to be local by being loyal to our local communities and states and our own river-banks and river sections, but we need to also be loyal to the entire Ohio River. I love the little Harrods Creek by my house which flows into the Ohio and i also love the whole Ohio. But we are missing huge economic activity from water sports from it being too polluted to really enjoy to its fullest because there has historically been no real accountability for the polluters. I have no problem with any company polluting (i pollute every day), just they should pay for their garbage and emissions in a true cost accounting that takes into account all the negatives and clean-up costs. Too many states are not on the same page, despite the Federal regulations and many have different standards of holding folks accountable.

Global problems need global groups solving them, and the Ohio River needs to continue having its group of stake-holders - ORSANCO overseeing and collaborating on its health for the benefit of all our citizens from all the states. All one has to do is read up on ancient history of various tribes not working together on other major rivers and the terrible floods and everything else that happened, and once they got together and worked together and built dams, etc, they boomed with huge economic activity cos of the increased collaboration on things like building dams that no individual tribe could have controlled or gotten done on its own. We should not let the states go back to being tribes in this instance.

thank you

To Whom It May Concern:

There are many functions of our great nation that can most effectively – and efficiently – be handled by state or local governments. For the health of our people, however, the quality of our air, our soil and our water cannot.

In the case of water pollution, this is especially true. We live in the great Ohio River Basin, which bisects the Eastern half of America and is the source of tremendous wealth through agricultural and industrial might. Sadly, that mighty river is considered the nation's most polluted, and its degradation knows no boundaries along state lines. It is one long channel, and the pollutants that are injected in Huntington, W. Va., or Portsmouth, Ohio, or Evansville, Ind. -- as well as the banks in between -- affect all of its people, not residents of a single state.

Congress realized this in 1948, when it created the Ohio River Valley Water Sanitation Commission (ORSANCO). Increasingly over the last six decades that organization, imperfect though it may be, has educated our citizens about the importance of clean water and through its monitoring stations has provided with scientific facts evidence of pollution. It has been a vital tool in the enforcement of the federal Clean Water Act, as amended in 1972.

James Bruggers of Inside Climate News has reported that a proposal to discontinue that multistate monitoring program is under consideration by ORSANCO, a step that not surprisingly is being greeted by industries and lamented by those responsible for the safety of water we all drink. It is a misguided step. Although not dictated by the administrations in either Washington or Frankfort, it reflects the current wisdom that federal regulatory efforts should be relinquished to the states. In our experience, state regulation of our waterways has fallen short.

A final decision will be made by ORSANCO very soon, and Monday, August 20, is the last day for consideration of public comment. We urge those who care about our health, not to mention that of our children and grandchildren, to speak out against this change. ORSANCO should be increasing its monitoring efforts, not abandoning them.

Cordially,

From: [John Young](#)
To: pcs@orsanco.org
Subject: On Cincinnati Water Safety
Date: Monday, August 20, 2018 5:30:34 PM

For public comment period:

A couple of big concerns for drinking water: We need to start making an effort to remove traces of drugs from drinking water. Humans pass about 40% to as much as 65% of drugs into our waste. This is not treated in wastewater treatment (another problem), but since we pull drinking water from the Ohio River (over 600 drinking water intakes line the nearly-1,000 miles of the river.

These drugs collect and build up in bodies, which is a big problem for small bodies—children. These pharmaceuticals can also interrupt endocrine systems and neurological systems. Big problems.

I've seen PhD studies that show concentrations of child cancers along the Ohio and Mississippi Rivers. This gets to my second point, we need to remove more known carcinogens from drinking water.

I know it's hard and expensive, but the EPA regulations allow some of these materials into the water because of cost. In the case of pharmaceuticals, we don't really know the cost because it has not been studied.

Please lead the country in adopting strict standards.

Regards, John Young

My name is Debra Smith. I am responding to an article in the Courier and Press in regard to eliminating pollution control standards for the Ohio river. We most definitely need to keep pollution standards intact! It is heartbreaking to think that the only thing of value to mankind is money. My guess is the reason you are wanting to eliminate the protection of our water is all about the money. I have no doubt that "big business" will be more than happy to throw waste in our Ohio. Every state should be accountable for the pollutants that they "allow" - which is pretty outlandish. How in the world do companies get permits to pollute our water? That is absolutely insane! Once again, I am sure it has to do with the dollar bill. If the business pays enough money they can probably pollute the water as much as they are willing to "pay" for. What about our future generations? What about our drinking water? We are a people who pretend to be intelligent, but yet willingly allow people to destroy our water, if the price is right. How intelligent is that?

I seriously doubt if I can make a difference, because words are cheap, but I could not live with myself if I at least did not state my truth. The leaders who allow this kind of things to take place need to be held personally accountable when later, we have poison water! I am grateful for the age that I am, but what about our children and grandchildren? It is their future life that is at stake.

Sincerely,
Debra Smith

To Whom It May Concern;

I am opposed to the eliminator of pollution standards for the Ohio River. Quite the opposite. The Ohio designation is already No Fishing No Swimming. I would rather see a RiverKeeper or several, standing watch or even with some enforcement powers, just like major river systems along the Hudson River Valley, Potomac River and Jacksonville Florida estuary.
Respectfully Submitted,

I'm writing with urgency that you *please* not repeal the standards for monitoring the Ohio River. These standards don't just monitor the pollution going into the water, they also keep history records for us- which is crucial.

I would love to know what else I could do to help convince you to keep the standards into place.

All the best,

Dear ORSANCO,

As an avid sailor along the Ohio River in Jefferson and Oldham Counties and a member of the Kentucky Waterways Alliance, I strongly support the current standards that attempt to prevent further pollution of the Ohio River. I request the Commission keep these standards in place and not reduce or alter them in any way to lower or eliminate them. We need stronger regulations and enforcement, not less.

Sincerely,

Subject: ORSANCO Pollution Control Standards
Date: Monday, August 20, 2018 6:02:57 PM

I am writing in support of a continuation of the enforcement of the Pollution Control Standards for Discharges into the Ohio River by the members of the eight state compact as has been historically practiced. ORSANCO has, since its inception, done an outstanding job in maintaining safe and sanitary conditions in the river. I disagree that the current standards and their enforcement by members of the Compact are redundant vis-a-vis the federal enforcement agencies, namely, the Environmental Protection Agency. ORSANCO has been reliable consistent enforcement body. Regrettably, the EPA has become politicized and it no longer be relied upon to provide the kind of standards and enforcement that is needed in the long term to protect the Ohio river resource.

Thank you.

The Ohio River is already polluted enough as it is. It would be a huge mistake to repeal any standards attempting to make it cleaner. At this point I don't have much trust that the federal government via the EPA, will oversee any of the typical safe water standards, thus making it even more important for local entities to take up the charge. I hope that you will make the right choice here.

Thank you,

Courtney Coriell Williams

Subject: Keep ORSANCO's Pollution Standards!
Date: Monday, August 20, 2018 6:05:51 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Theresa Sabo

Subject: Maintain the Pollution Control Standards
Date: Monday, August 20, 2018 6:14:36 PM

Hello,

My name is Ryan Bowron, and I am a resident of Ohio living at:

4915 Stewart Ave.
Cincinnati, OH 45227

I do not think ORSANCO and any of its member States should lessen any of the regulations and processes in effect that maintain the quality of the river. The Ohio River has a long history of being polluted by industrial enterprises and thus has some of the poorest water quality in the nation. The Pollution Control Standards should continued to be upheld as they are there to protect citizens and the common good, most especially their source of drinking water. Industry has thrived long enough by polluting our public waterways for its very private benefit. If they cannot profitably operate in accordance within these protective measures, then they should not operate at all, and cleaner alternatives should be used to provide their product or service.

Sincerely,
Ryan Bowron

Subject: Continue to set pollutions standards for the Ohio River
Date: Monday, August 20, 2018 6:16:53 PM

ORSANCO has done a very good job. Do not turn this responsibility over to the states who are not equipped, funded, and able to do as good a job. It is CRUCIAL that the Ohio River been keep up to high standards.

In the first place, it is drinking water for more than 5 million people. That is reason enough to keep the standards high! Look what happened in Flint when the standards were ignored for money reasons.

In the second place, oil and gas infrastructure is coming to the Ohio Valley. We need the best possible support for clean water.

Thirdly, there are close to 200 criteria that some states do not test for. Those tests are crucial!!

I strongly recommend you hold more hearings so people from all parts of the Ohio Valley can be heard: PEOPLE WHO LIVE THERE, NOT INDUSTRIES THAT ARE CONCERNED FIRST AND FOREMOST ABOUT THEIR PROFIT MARGIN!

Thank you.

Dear Commissioners,

I have read about the ORSANCO commission's proposal to eliminate its pollution control standards saying they appear to be redundant. My husband and I feel that doing away with ORSANCO'S standards would be a set-back for river quality. We live in Santa Claus, IN and our town receives much of its drinking water from aquifers from the Ohio River. We remember when the Ohio River was so dirty and deemed dangerous to drink or swim in. ORSANCO standards must have been a good thing for the Ohio River is so much more improved since the 50s and 60s. It seems that the Republican administration wants to take us back to the early 20th and late 19th century when there were no environmental standards set. Every day it seems that the EPA and IDEM want to put citizens into arms way by increasing the amount of toxins we can be exposed to whether by air or by water. Yes, in this day and age, we need numerous commissions and high standards to protect us! Let's not mess with what has been working well protecting American citizens.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Please maintain your excellent standards of monitoring pollutants and continue to help our community to reduce and prevent dangerous exposures to pollution and water abuses in the Ohio River!!!! We are all so very grateful and willing to work with you to stand fast on this issue if only you will continue to lead the way and provide a network of leadership for those of us in other cities.

ORSANCO has been a lifeline for those of us here in Louisville KY so many times that it is hard to recall the number of times we have benefited from your advance notice with regards to dangerous effluent and algae blooms amongst other bacterial and pollution issues.

If we can join together to provide more support for River Sweep or as River Watcher Training Staff through our not-for-profit here in Louisville then please call on us and our partners at KY Waterways Alliance. We would like to make a film to support the work you do and expand that work to reduce and address the polluters and pollutants adequately as if we are all one big family helping an older family member who can no longer care for themselves.... The Ohio River is a living entity who may be wild and difficult but deserves our love as a key source of life for our region.

Please call upon us in any way if you should need partners to continue the **ABSOLUTELY NECESSARY WORK** of maintaining high standards of monitoring and preventing dangerous exposures to toxins in our water!!!! Please take into consideration that many of those who depend upon the river and its health have no voices or ability to tell us how important the river is to their survival and about the dangers of pollution to their every day existence.

Thank You Kindly,

Kristin Shelor

To Whom it May Concern:

I disagree with the following: Any lowering or revision of water quality standards in the Ohio River, the limited time the public 24 has to comment on this proposed action, the reduced number of public hearings for such an important public health position, and the sense of urgency that has been falsely used to fast track this position. In an era when more is known daily about the deleterious and unhealthy impact of certain chemicals present in water quality, this is not the time to lower standards. We believe this position does not align with the original intent of the charter that established ORSANCO and for which public dollars are invested annually.

The ORSANCO needs to remember it's original intention—to oversee and govern environmental standards. This cannot be regulated to the EPA. Our current administration has no desire to help the environment and is so in flux, there is little reason the EPA will do anything in the form of "protecting the environment." The role of ORSANCO is to pay closer attention to regional environmental factors, things overlooked by federal and state agencies. Ohio has a lot of work to do, especially in the cleanliness of the Ohio River. Please don't let cutting corners get in the way of ORSANCO intended mission, Ohio and it's people suffer when money comes first.

Hello, my name is Aislynn Willis.

I do not think that OSANCO should be repealed. The pollution of our Ohio river should continue to be regulated under the laws set by OSANCO in all states where applicable. It is not the time to lower any standards for river water quality in our area. The pollution in our Ohio river continues to get increasingly worse periodically. Any and all laws regulating the further pollution allowed should be kept in place to prevent/safeguard this from happening at unnecessary and extensive levels.

Thank you for taking the time to listen to my opinion on the matter.

Dear Sirs and Madams,

I am writing to advocate for clean water in the Ohio River. As the primary water source for the city of Louisville, the health of our citizens is directly impacted by the regulation of what is dumped into that body of water. I am adamantly in favor of regulating what goes into the Ohio River, and NOT decreasing the oversight that protects our citizens. While I am not in favor of unnecessary regulations, I feel that the regulations supporting the clean water initiative are too important to roll back. Please maintain the regulations that limit what can be dumped into the Ohio River, and implement strict penalties for those individuals or businesses that harm the health of our citizens.

Thanks,

Subject: water quality of Ohio River
Date: Monday, August 20, 2018 8:08:12 PM

Hello to whomever it may concern,

I am writing to offer my opinion that I believe regulating the water quality of the Ohio River and/or other bodies of water is a good thing, because the quality of our river means a lot to me, my family and friends and acquaintances. What one agency or organization might miss another may find, so trying to work together for a common goal can only be beneficial. We have been boaters on the river for 13 years and have been drinking water from this river our whole lives (50+years) so this is very important to us. With only one treatment plant to clean our water, it is of the utmost importance to do everything possible for the cleanest water supply and also for recreational use because there are a few spots actually safe enough to take a dip in on these hot summer days in Southwestern Indiana. I prefer to be able to boat safely practically in our own backyard than traveling to a lake well over 60 miles away. So I believe any additional regulation can only be a good thing and not a waste of time.

Thank you for allowing me to voice my concerns and opinions,

Subject: DO NOT STRIP ORSANCO OF ITS POWER TO REGULATE POLLUTION
Date: Monday, August 20, 2018 8:38:35 PM

For the last 70 years, standards for who can dump what and how much into the Ohio River have been regulated by The Ohio River Valley Water Sanitation Commission (ORSANCO), and I would like to make sure that these regulations stay in place.

I am against any vote that would strip ORSANCO of its powers to regulate pollution control standards along the Ohio River.

As a Louisville homeowner, I am concerned about any changes that would negatively impact the quality of our drinking water.

Sincerely,

Kathy Bradley

Please do not strip any regulations being held by ORSANCO or their ability to monitor and restrict dumping and overflow. This is OUR water source and a couple more regulations to ensure public safety and health is necessary.

From: [Miller, Elizabeth \(BHE\)](#)
To: PCS@orsanco.org
Subject: Pollution control standards under ORSANCO
Date: Monday, August 20, 2018 8:43:49 PM

Please do not limit the reach of ORSANCO pollution regulation but please extend pollution standards on the Ohio River further. I have lived in Louisville my whole life and spent every summer enjoying the river by canoe and houseboat. The river is already far more polluted than what I recall in my youth. Now that I have 2 young children, I hope as adults they can also safely enjoy the beautiful Ohio. The river is a vital source for residents' drinking water, provides tourism, beauty, and recreation to our region. Under the Trump presidency with its blatant disregard for the environment, we must not depend solely on the Clean Water Act to protect the mighty Ohio.

Thank you,
Elizabeth Miller

Dear Commissioners,

Please do not rollback regulation of the Ohio river basin. Living in Cincinnati, I depend on it for my drinking supply, and have to pay the costs to make it potable, costs which will increase if pollution is allowed to increase even more. There is no reason to expect companies to effectively self-regulate their discharge into the river, as it is there have been thousands of violations of the clean water act in the region in the last decade.

Instead of undertaking a dangerous scheme of deregulation, do the right thing, and not only protect the river and the many people who depend on it from the ravages of industry, but also create a plan for intensive remediation, to undue the damage that has been done, and give us the environment we deserve.

Sincerely,

Logan Simmering

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

PLEASE DO NOT strip your ability to set standards for water quality on the Ohio River. State standards can change any time. We CANNOT and SHOULD NOT rely on every state along the river to do the right thing and keep our drinking water as clean as possible. Oversight and regulations when it comes to public health are never a bad idea in my book. If all states comply and have standards as good as or better than those set by Orsanco, then great, that's less work for you to do. But let's not give them a green light to do whatever they want just because they can.

Thank you,
Virginia Delaney

Dear ORSANCO Commissioners,

I am writing regarding the 2018 Pollution Control Standards review. I greatly appreciate the hard work and clean water programs ORSANCO staff has implemented over the last 70 years to guarantee a fishable, swimmable, and drinkable Ohio River. That is why I believe it is inappropriate for ORSANCO to remove the numeric pollution limits and public review process from the Pollution Control Standards for the Ohio River.

There are 440 pollutants for which the ORSANCO numeric pollution limit is either more protective or no state water quality standard has ever been adopted to protect human health and the environment. ORSANCO's numeric pollution limits and public review process guarantees all of the pollutants that could impair the Ohio River are adopted in the standards and the states and public have a robust forum to raise and resolve Ohio River water quality concerns.

Please protect the Ohio River by voting NO on the proposal to eliminate numeric pollution limits and public review from the Pollution Control Standards for the Ohio River.

Subject: Re: Proposed Revisions to Pollution Control Standards
Date: Monday, August 20, 2018 9:19:04 PM

Hello ORSANCO,

My name is Evan Cooper, 6253 Chappellfield Dr, West Chester, Ohio 45069.

As a resident of the region you are supposed to be protecting (I live in the Mill Creek area), I am concerned about this proposal. Though I am upstream from the Ohio, I am concerned that these changes will weaken water pollution standards across the region, and disproportionately impact communities along the Ohio River, like the City of Cincinnati proper, having an adverse effect on inequality in access to clean water.

The Ohio River stretches across a broad region, as I'm sure you are all aware. For this reason, state level controls are inadequate. If a state upriver decides to just stick with baseline clean water act requirements, then every state down river is out of luck. The Ohio is already one of the most polluted bodies of water in the United States as it is. Removing ORSANCO controls does nothing to serve public interest, and if anything, sells our communities out to oil and chemical companies who only seek profit. More money for them, dirtier water for us. Hardly seems fair to me.

I hope you take my comment into consideration,
Thanks,
Evan Cooper

Dear ORSANCO Commissioners,
I recently learned that the Commission is considering removing the numeric pollution limits and public review from the Pollution Control Standards for the Ohio River.

These standards over the years have protected the Ohio River from over 440 pollutants and in turn, protected human health and the environment. I am urging all the commissioners to vote NO on the proposal to eliminate the numeric pollution limits and public review from the Pollution Control Standards for the Ohio River.

It is unwise to think that the states are in a position to protect the Ohio River, the people who depend on it, and the surrounding environment. The resources and the political will to do so at this time is scarce.

Please vote NO.

Hello,

I have been following ORSANCO's work for about a year, and I am concerned to hear that you are considering hitting your authority to regulate pollution control standards. As a conservationist, I am greatly concerned about the member states' commitments to clean water and environmental regulation. Kentucky made major changes to its Natural Heritage Fund this past fiscal year, cutting funding in half from its nature preserves, state parks, forest service and Wild Rivers programs. And many of these other states do not show signs of having a strong commitment to high environmental standards.

Please do not back out of regulating pollution in the Ohio River. You are almost definitely the best chance we have at clean water.

Sincerely,

Kerry Skiff

To whom it may concern,

Any changes to water standards for the Ohio River and pollution should not involve weakening or lessening the standards or allow companies or municipalities to dump more pollution into the river. As we fight additional natural pollution or disasters and the current level of pollution, we already see threats to our waterways. Lowering the standards or allowing additional pollution would stress our waterway even further.

Please do NOT allow additional pollution. At some point we need to be honest about the future of our waterways. Rolling standards back or lowering them is not the right answer.

Dear ORSANCO leaders,

I disagree with the following:

Any lowering or revision of water quality standards in the Ohio River,
The limited time the public 24 has to comment on this proposed action,
The reduced number of public hearings for such an important public health position,
The sense of crisis that has been falsely used to fast track this position.

In an era when more is known daily about the dangerous and unhealthy impact of certain chemicals present in water quality to people and animals, this is not the time to lower standards. There is not peer reviewed data to support this. This proposed position does not align with the original intent of the charter that established ORSANCO and for which public dollars are invested annually. Let's keep our leadership legacy of clean water and challenge ourselves to rise to the challenge instead of raising pollution levels on bad science.

Thanks,
Anne Brack, Cincinnati, OH 45215

Hi,

I am writing to strongly urge the commission to not strip the ORSANCO regulations for pollution on the Ohio River. It is my understanding there are regulations that are not covered by federal and state regulations included in the ORSANCO regulations. We need more regulation of pollutants in the Ohio, not less!

Cheers,
Lilias Pettit-Scott

Subject: Keep ORSANCO standards
Date: Monday, August 20, 2018 10:02:19 PM

Ohio River is still one of the most polluted in the country.

The federal government is currently attempting to weaken the Clean Water Act. Having the same standards for all 8 states that the Ohio river touches is prudent in the face of differing state standards and potentially weakening federal standards.

In the absence of ORSANCO, state pollution levels will vary and affect overall water quality in the Ohio River.

We need cleaner water and stricter standards, not potential for worsening the already poor water quality of the Ohio River. Dropping ORSANCO standards not only threatens drinking water, but also recreation on the river and the resulting tourist revenue.

Please vote to retain ORSANCO standards and continue to strive to make sure the states are abiding by them.

Dear, ORSANCO

As a lifelong resident of Louisville, 35 years, I strongly urge that you continue uninterrupted regulation of the Ohio River watershed.

Were ORSANCO to cease its regulatory oversight, I fear, that, my health and the health of the community in which I live and work would be unjustly jeopardized.

Reliance on superior oversight is a flawed justification for ceasing the watershed regulations delivered by ORSANCO.

Acting locally and thinking globally should be one of your guiding tenets and not vice versa.

Best regards,

Stephen Peterson, CPHQ

I would like to see ORSANCO continue regulating pollution control standards along the Ohio River.

Regulating at a more localized level enhances programs such as the Clean Water Act and can help keep things in check in tributaries and downstream. We need to be good stewards of our local resources as well as good neighbors. What happens in the Ohio affects people and resources beyond our state.

Thank you for your consideration,

Amy Jewell

Dear Commissioners,

Please do not reduce or eliminate your pollution control standards for the Ohio River! The standards in the surrounding states (including my home state of Indiana) are insufficient for maintaining water quality for people and wildlife. We know that the consequences of poorly regulated water can be devastating (e.g., lead poisoning in Flint, Michigan) and since your goal is to protect this great Ohio River waterway, a decision to not enforce scientifically sound regulations and protections could be tragic with regard to the health of citizens who live near the river or drink it's water. I and many others will be following your decision with great interest, and I request that you respond to my email in a timely fashion. Thank you.

Subject: Keep ORSANCO's Pollution Standards!
Date: Monday, August 20, 2018 10:35:16 PM

Dear ,

I urge you to keep the standards that the Ohio River Valley Water and Sanitation Commission (ORSANCO) has in place because I value these water pollution control standards that protect the drinking water of over 5 million people.

According to ORSANCO's own report, there are 188 parameter criteria that the signatory states and the EPA lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state. As with the Great Lakes, the Ohio River is a resource that should be valued and maintained.

Considering the importance of ORSANCO's standards to public health and the environment, they need to remain in place to make sure that the Ohio River remains appealing to residents, tourists and wildlife.

We demand that ORSANCO's pollution control standards remain in place!

Sincerely,

Subject: Retain numeric pollution limits for Ohio River Basin
Date: Monday, August 20, 2018 10:35:52 PM

To Whom It May Concern:

Since 1948 the Ohio River Valley Sanitation Commission (ORSANCO) had worked with member states to improve water quality in the Ohio River Basin, in part by to setting pollution limits. This work has been critical in making sure that pollutant discharges into the Ohio River in one state don't have a negative effect on the downstream waters of another state. I am writing to express my concern regarding the proposed discontinuation of the important practice of ORSANCO setting numeric pollution limits for the Ohio River Basin.

If ORSANCO's commissioners abandon the critical work of overseeing the pollution limits as they have these past decades, we will not be able to say how much pollution is too much, and the quality of citizens' drinking water may be jeopardized. In addition to this public health concern, in the absence of meaningful pollution limits, the potential for a polluted Ohio River could damage states' economies through reduced recreational opportunity.

I urge ORSANCO to continue its current practice of setting pollution limits for the Ohio River Basin.

Thank you.
Sincerely,

Elizabeth F. Cross

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Please do not get rid of pollution regulations. Oversight and regrouping personnel should be increasingly easier through having both layers of protections. They should be able to work together and help with checks and balances. Efficiency in the organizations that protect the environment and our natural resources should not include stripping regulations.

With the increase in global warming and the growing water scarcities we can not take anything for granted. Review policy with the people before getting rid of policy.

It does not feel like the right time to be relying on the Environmental Protection Agency. State's responsibility, not just EPA.

Subject: Protect our clean water : REJECT OPTION 2!
Date: Monday, August 20, 2018 11:07:41 PM

To ORSANCO commissioners:

I am a citizen of Cincinnati, located along what is currently the most polluted waterway in our country. I was shocked to learn that you are seriously considering Option 2, which guts ORSANCO's oversight and leaves our already vulnerable water supply in deep jeopardy.

We depend on good drinking water—this is a basic right. Your job is to protect our water. This should not be about making it easy for industry to pollute —public health is more important than corporate profits!

Commissioners with ties to industry—for instance, Commissioner Snavely (retired from 8 Excel Mining), Commissioner Flannery of West Virginia (connected to the National Coal Council), Commissioner Potesta (has represented DuPont, one of the worst polluters of the Ohio)—should not be entrusted with making decisions about cutting regulations. Any commissioner that has such ties to industry with a vested interest in lowered standards should not be permitted to vote on relaxing standards.

It is shameful that you are moving to gut these standards, and that despite public outcry have not held more meetings for public comments. You work for the public, not for industry, and yet it appears you have forgotten your mission.

Please look hard at your consciences. Imagine the situation in Flint, only exponentially bigger, impacting up to 5 million people. There are some things more important than industry and profits. You have been entrusted to safeguard this essential resource, and pretending that you are eliminating “redundant” standards when it has been proven that there are at least 188 instances that ORSANCO's current standards are NOT in existence in the state standards you reference.

It has been said that those who have not learned from history are condemned to repeat it. Think Flint, Michigan. Think the burning rivers of the recent past. Think Love Canal. Please do not gut ORSANCO's regulatory powers. Instead, uphold your mission: To control and abate pollution in the Ohio River Basin.

Please return to your public mission and do the right thing: Reject Option 2! Maintain the stricter standards that protect lives and preserve the environment.

Sincerely,

To whom it may concern:

Throughout US history, every environmental regulation has been met with resistance and push-back from industries seeking to continue to use everyone's environment as their free dump. Yet rarely do any of their threats of dire consequences of being made to clean up their discharges result in their meaningful losses. Instead, they use their feedstocks more efficiently and cost effectively.

Regardless, polluters have no moral authority to impose threats to the public health without everyone's permission. I don't offer my permission to pollute my water source. I hope ORSANCO also won't offer its permission to pollute my water source. We have sufficient technology to prevent nearly all water pollution. What society sometimes lack is the political will to use that technology. Some states would like to give into industry pressures to be allowed to cut corners. Everyone in the Ohio River Valley needs ORSANCO to ensure they don't give in to those pressures.

As a millennial, during school, I had teachers who would say things like, "We didn't worry about pollution in the past because we couldn't measure it." Why worry about something that couldn't be understood, was the point, or perhaps the idea was to focus on what you could control. We now have instruments that allow the quality of the environment to be measured. The measurements only have value if they can be compared to standards that indicate whether we should worry or not. How the standards come to be is a separate question, but the standards themselves are what puts the water quality monitoring into perspective. I could understand before there was technology to assess water quality and had pollution control standards to know the safety of the water why you would not bother worrying, but removing pollution control standards now would remove the ability to understand the water quality condition. In the 2008 Strategic Plan it states:

"Article VIII of the Compact directs the Commission to study the pollution problems of the District and make recommendations for their abatement and prevention.

Vision

The Commission attains an understanding of all water pollution problems in the District and, in cooperation with the member states, works towards their solution.

Strategic Objectives *f*

The Commission will assess the results of its monitoring programs to gain an understanding of water quality conditions in the Ohio River and its tributaries, and to identify actions needed to achieve and maintain water quality objectives."

(<http://www.orsanco.org/wp-content/uploads/2016/07/StratPlan2008-2.pdf>).

My question is, without pollution control standards, how can the Commission attain "an understanding of all water pollution problems" and "assess the results of its monitoring programs" with just water quality monitoring alone. I get that the water quality can be monitored, but other than presenting the information, how can a determination be made that the quality is polluted without quantification of pollution controls to assess them against? It seems to me the needs to be an established set of controls that can be referenced.

Also, the Statement of Public Accountability states :

"Statement of Public Accountability

The Ohio River Valley Water Sanitation Commission has been established by an instrument of the laws of the member states and by the United States of America. The Commission is supported by public funds provided by the member states and the federal government. As such, the Commission recognizes its obligation to the public it serves: to make its information and findings available to the public, to educate the public regarding water quality in the Ohio River and its tributaries, and to consult with the public in its decision making about the restoration and protection of the waters of the district."

How can the Commission fulfill its obligation to "educate the public regarding water quality" without pollution control standards to understand "its information and findings available to the public".

<http://www.orsanco.org/wp-content/uploads/2016/07/StratPlan2008-2.pdf>

Finally under ORSANCO Bylaws, it states:

"7. Pollution Control Standards Committee. The Pollution Control Standards Committee shall be comprised of six or more members with at least one Commissioner from each of the six states bordering the Ohio River, with the Chairman of the Technical Committee, the Executive Director and Legal Counsel as ex officio non-voting members. It shall review the Commission's Pollution Control Standards on a triennial basis and may review specific standards as needed. It shall report its findings to the Commission and recommend actions pursuant to Article VI of the Compact. Further, the committee shall meet as necessary to review instances of significant non-compliance with the Compact and the Commission's Water Pollution Control Standards and provide reports and recommendations to the Commission as appropriate. At minimum, prior to the regular October Commission meeting each year, the Pollution Control Standards Committee will review an annual Summary report of the previous (fiscal) year's activities of non-compliance wastewater dischargers and provide recommendations to the Commission for appropriate action."

<http://www.orsanco.org/wp-content/uploads/2016/07/Bylaws-Adopted-February-2017.pdf>

How can the Pollution Control Standards Committee "review...and provide recommendations to the Commission for appropriate action" if there are not pollution control standards set for everything that is reported in the water quality monitoring, like mercury for instance?

From,
Sam Bedree

PCs comments. Reducing pollution standers fo the Ohio River is a bad idea. We need to enhance the standards. Most people go to Kentucky to use their lakes and rivers as they are not as dirty. EPA has been gutted under the admin we have now. There is not an EPA officer in Evansville now. So they cannot help monitor. If you don't protect our resource then WHO? It would be nice to eat fish out of our Ohio again since we are told not to consume it now. Please do not reduce the standards.

I disagree with the following: Any lowering or revision of water quality standards in the Ohio River, the limited time the public 24 has to comment on this proposed action, the reduced number of public hearings for such an important public health position, and the sense of urgency that has been falsely used to fast track this position. In an era when more is known daily about the deleterious and unhealthy impact of certain chemicals present in water quality, this is not the time to lower standards. We believe this position does not align with the original intent of the charter that established ORSANCO and for which public dollars are invested annually.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Leah Rampolla

Dear ORSANCO,

I am a citizen of Louisville, Ky. I am concerned about the safety and health of the water of the Ohio River.

Please do not reverse the progress that has been made since Oct 2015!

Rivers give life and they deserve our protection.

Sincerely,

Ann Walsh

620 Park Ave

Lou Ky 40208

August 1, 2018

ORSANCO Commission,

Please maintain the October 8, 2015 Pollution Control Standards for Discharges into the Ohio River. The standards are necessary to maintain and improve the sanitary standards and safe drinking water for millions of people.

Water is the single most important commodity in our lives.

Please reject the proposed changes as this could do irreparable damage to the people along the 900 miles this river travels along the eight states, Kentucky, Illinois, Indiana, New York, Ohio, Pennsylvania, and West Virginia.

The number of benefits the people, environment and future generation would receive by maintaining the October 8, 2015 Control Standards for Discharges far outweigh the benefits the few would receive by rolling back these standards.

“ American marine biologist Sylvia Earl offers this perspective: “No water, no life. No blue, no green.”

The CDC tracking network of Community Water Contaminants has stated that over 900, 000 people a year become ill due to contaminated water. Removing the restrictions will only increase the probability that more people will become ill.

Again, Please maintain the October 8, 2015 Pollution Control Standards for Discharges into the Ohio River.

Sincerely,

Geoffrey and Mary Arth

Ohio River Valley Water Sanitation Commission

5735 Kellogg Avenue

Cincinnati, OH 45230

Dear Commission Members:

As a Louisville resident the condition of the Ohio River is of vital importance to me. We have made great progress in pollution control and I am fearful that proposed changes in standards will have multiple adverse effects. I urge you to maintain the October 8, 2015 Pollution Control Standards for Discharges into the Ohio River. The conditions in our river affect drinking water and recreation over 900 miles in eight states so control over sanitary conditions has wide impact on the health and safety of many, many people.

Thank you for your attention.

Sincerely,

Marcia Texler Segal, PhD

ORSANCO
Attn: PCS Comments
5735 Kellogg Avenue
Cincinnati OH 45230

Dear Sir or Madame:

I read an article in THE RECORD regarding proposed changes to the Pollution Standards Control of October 8, 2015. I am deeply concerned about the environment without these controls and especially about the safety of our drinking water.

Increased dumping of toxic waste by industry into the Ohio River would lead to contamination. Not just for Kentucky but eight states along the Ohio River.

The article reminded me of a college paper I wrote in the late 1990's. I wrote about pollution and a paper mill across the Ohio River from my hometown. The whole area was filled with a nauseating smell and soupy fog. The fog and smell are gone now.

At the time I wrote the paper I was worried about the future of my grandchildren. Now I have great grandchildren and great-great grandchildren. What kind of future will they have?

As citizens of the United States we depend on Industries to do everything possible to protect our clean air, water and earth. So your family, my family and all families, "And Future Generations," have food to eat, clean air to breathe and most important clean water to drink.

Without clean water there will be no future generations on this earth.

I can't express the importance of keeping the Pollution Standards Control of October 8, 2015 intact.

Sincerely

Mary Howell

Re: Proposal to Eliminate Pollution Standards/Ohio River

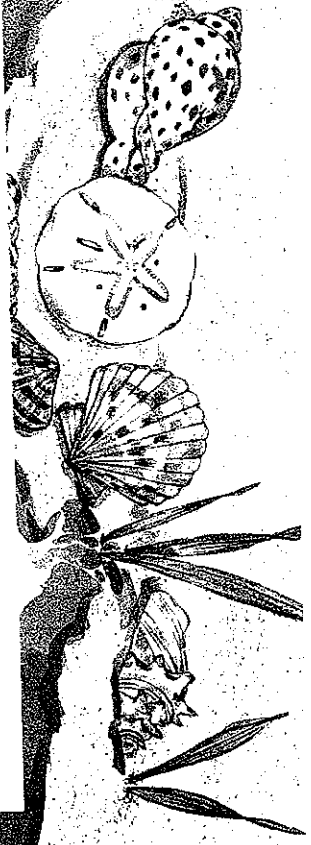

Dear Sir/Madam:

This letter to urge you to **reject** the industry-backed proposal to eliminate pollution standards for industrial and municipal wastewater discharges in the Ohio River. I understand this proposal would affect the safe drinking water and sanitary standards in over 900 miles of river along eight states, including Kentucky where I and my family live.

Thank you to your attention to this matter.

Donald R. Schlader

Cc: Claudette Schlader

A Special Note...

To Whom It May Concern:

Please do not take away the protection(s) we have for clean water.

With all of the changes in weather, politics, personal safety the value of clean water should be a given. Do not change our rivers into dumps for industrial pollutants and chemical run off.

For the future generation, please, please keep our standards strong. We have excelled at ruining the planet for ones for our phones, the expansion of industrial business and chemicals for farming and pest control. It

cannot be to much to ask to follow the rules in place to make our water safer as long as possible.

Thank you for your time.

Sincerely,

Bonnie L. Waldenard
4104 Gingerwood Dr.

ORSANCO Commissioners
181 Renslar Ave.
Cinci., OH 45228

Gentlemen;

From the Trump Administration, we have a proposal to lower the standards on pollutants allowable in the Ohio River.

I understand that the original petitioners for this are 25 plus coal-fired power plants lining the Ohio River. And, while the current EPA Administrator does not have the disgraced reputation of Scottt Pruitt, he was previously a paid lobbyist for those interests, and would want to realize those pollution objectives.

If the discharge of power plant wastewater is approved into the same waters as where we get our drinking water, this would pry open the door to further adulteration of these waters-- to industrial and mining discharges, more sewage and bodily eliminations of pharmaceuticals, and agricultural runoff, for example.

Since this pertains to the Ohio River and its tributaries, these water sources are also home to Federally-endangered Species. Some of the latter are more pollution-tolerant than others; so we would see deaths.

The Trump Administration and EPA administrators have sought to eliminate the "Waters of the United States" rule, along with other safeguards of the environment. These are not honorable men, who are alert in the public interest.

Wm Montgomery

To whom is responsible for protecting our river

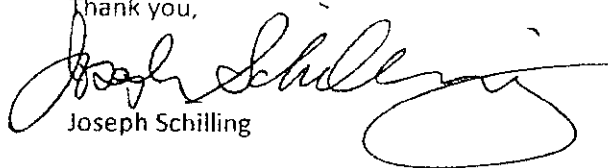

I want to take this moment to say how concerned I am with the possibility of removing restrictions that limit the dumping of wastes like mercury into the Ohio River.

I grew up in Cincinnati and spent most of my childhood having been told to stay away from the river because it was polluted and unhealthy. In 2000, I moved away from Cincinnati to the beautiful state of Maine, where I could enjoy the many natural wonders that area had to provide. A gorgeous coastline, clean rivers and streams that I could visit for kayaking and swimming, majestic mountains for hiking and camping, and clean air.

In 2016, I had to return to NKY/Cincinnati to help an ailing parent and was pleasantly surprised to see the revitalization of the riverfront on both sides of the river. This resurgence of the river was made possible by the many efforts to clean up the river and the efforts have clearly made a difference in the economies of bordering cities.

Much work has been done and many advances in cleaning the river have been achieved, and so I ask that you do not slip backward and instead, maintain the restrictions and enforce these regulations in order to continue the progress made.

Thank you,

RE: Pollution Control Standards-OHIO RIVER MOST POLLUTED BODY OF WATER!!!!

513-231-7761

It is inconceivable to me that ORSANCO would even consider eliminating pollution control standards for our source of drinking water, as well as the others who also depend upon our river to be safe. I don't understand why ANY ENTITY would compromise such a life-dependable resource. We are only as healthy as our environment because everything depends upon water. You may not drink the water, but you still bath (REMEMBER YOUR SKIN IS AN ORGAN), wash your clothes, your dishes, and water your vegetable gardens. Please stand up to political pressure and the pressure of big business and not only continue the current pollution control standards, but instead, strengthen them for all of us.

To Orsanco

8/5/17

Please, for God's sake &
our children's, keep the
10/8/15 pollution control (Ohio -
River)
standards in place. Reject
the proposed changes.
We are killing the earth &
ourselves!

Cincinnati OH 45230

Dear Commission Members:

I sincerely hope that you make no effort to eliminate the pollution control standards set by your commission. The agreement among the eight states helps to ensure the quality of our watersheds, and is of vital importance to all our citizens. The river water does not stop at the state borders, and we are all interdependent of each other.

On a related topic, Indiana State Representative (District 71) and several other members of the state house have worked tirelessly to ensure the bordering states cooperate to protect our river, forming the Ohio River Caucus. He spoke recently about his apprehension regarding such a move by ORSANCO. I trust that his judgment is sound.

Please do not lose this important protection. Leaving it to the individual states invites loosing of standards and loss of cooperation.

Sincerely,

Rita A. Fleming M.D.
Candidate, State Representative
District 71, Indiana

ORSANCO

August 13, 2018

ORSANCO:

Please do not abandon your role in setting pollution control standards for the Ohio River. Your organization has been vital in ensuring the health of all people, businesses and other entities who depend upon the river for clean drinking water, bathing water - and water used for production purposes.

What has possibly changed enough to allow this commission even to think about abandoning the role you have played for six decades in ensuring water quality in the Ohio River basin?

There is no other entity - including the EPA - which can or will provide the care, knowledge and expertise needed for setting proper standards for the unique water system which is the Ohio River.

People are tremendously aware of ORSANCO and this pending decision. Be assured that citizens do not want any lower water quality standards and they do not want ORSANCO to abandon the mission it was given in 1948.

Cathleen Arnold
