The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Patricia Kraus

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Erin Anheier

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

scott dance

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Jan Anderson

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

William Huber

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Pamela Warren

Subject: Pollution Control Standards for the Ohio River
Date: Thursday, August 16, 2018 2:54:45 PM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Linda Agoston

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Barbara Estes

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

m y

This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

KIM SANBORN

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River. This is a national issue.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Aug 16, 2018

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Lisa French

This is important to me because the Ohio River forms the outer edge of the city where I was born and have lived most of my life. I have traveled on the Belle of Louisville in this river, and thus it has become dear to me. Its pollution has always bothered me, and I ask you to please not give up hope on promoting its progress toward a much safer and clearer state for people, wildlife, and the environment.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

To: pcs@orsanco.org
Subject: Protect the Ohio River, Too!
Date: Thursday, August 16, 2018 3:24:53 PM

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

Lisa Whalen

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Kimberly Justice

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

katherine.rusnak

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Anne Wells

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Elizabeth Oehrle

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River. I live in Illinois, but have spent many days traveling in areas near the river. I also know how important the river is to the overall health of our environment.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Stephanie Bissell

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

jeanette gold

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

steve babb

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Anton Klotz

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Yvonne Fowler

Aug 16, 2018

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

S G

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River. Look at what's happening in Florida as a result of loosening up pollution control safeguards? Millions of dead fish, turtles and other wildlife, loss of tourist dollars, beaches that cannot be enjoyed, stench, and huge, expensive cleanup effort. There are lessons to be learned when states put profits over environmental and health concerns.

Sincerely,

Barbara Pohl

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

To: Ohio River Valley Water Sanitation Commission

We write to request that you retain your important role in setting scientifically based pollution control standards for the Ohio River. As Ohio natives and 47 year Hoosiers, we care deeply about water quality in our treasured Ohio River. Unfortunately, it seems to be one of the most polluted rivers in the country and in the lead on industrial pollution. However, that makes it all the more important to know what the limits should be for the vast array of pollutants that need to be managed. Left up to each state, inconsistencies and additional overall costs are the likely result. The states along the Ohio River need to continue to work together to improve water quality in the Ohio River and ORSANCO's role in identifying pollution control standards is vital.

Please reject the proposal to give up ORSANCO's Pollution Control Standards.

As a person who lives in Vevay Indiana I am very concerned. I see in a Madison Courier article about ORSANCO considering dropping some pollution protection for the Ohio River. My Analogy to this is the medical profession has moved forward with advanced techniques over the last 50 years. It is moving forward and saving more lives. A doctor may have saved one of your members lives. Here we now have advanced pollution control in place by OSANCO to protect the Ohio River valley. You make us safer and the river more beautiful. It is currently in place yet you talk about regressing. You should instead be striving to advance like any worthy science . Just who benefits from a dirtier river? A friend of mine says “you can’t throw something away. There is no away .”

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Deborah Miller

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Lisa Franchino

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Diane Clark

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Jennifer Neff

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Andrew Pickel

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Kim Paslay

ORSANCO Commission Members,

ORSANCO'S Pollution Control Standards for the Ohio River should NOT be eliminated.

A sanitation commission should promote sanitation. A sanitation commission should not eliminate standards that promote sanitation.

I have lived along the Ohio River almost all my life. A cleaner river is good for people and business.

Kathy Rohlfig

Aug 16, 2018

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

R Sprague

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River. Our rivers must be protected from the callous irresponsibility of polluters, and we need our government agencies to see that they are.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Subject: Pollution Control Standards for the Ohio River
Date: Thursday, August 16, 2018 6:39:00 PM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Julia DeNiro

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Charles Petrof

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Tina Ceaser

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Carol Tafel

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Sheila Erlbaum

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Janet Falcone

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Lisa Mistretta

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I wish to express my grave concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is completely unacceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly requires a collaborative approach.

The Commission must continue to uphold its responsibility to protect our waterways, communities and wildlife, and to ensure that all states work toward common goals and a cleaner, safer Ohio River. Thank you.

Sincerely,

Carol Gray

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Janice Hunter

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Joan Roberts

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Gretchen K Wingert

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Subject: Don't relax the regulations
Date: Thursday, August 16, 2018 8:51:47 PM

I want the Ohio River to stay a clean source of water for our city and not become a toxic waste dump site. I do not support relaxing the regulations regarding what goes into the river. Louisville draws visitors and natives alike to its river banks for recreation, and if this resource is not protected, it can affect our economy negatively as well as our health. In these times, water is the most precious resource in the world and it must be protected.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Karen Heuler

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Alexandra Tumarkin

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Abel Rivera

To Whom it May Concern,

I spoke at the recent public hearing on the proposed "revision" of the ORSANCO standards for sampling and monitoring of the Ohio River. At the time, I mentioned the impact of more frequent and severe extreme precipitation and drought events on water quality and security that will likely occur in coming years. This is the worst possible time for us to lower our guard for ensuring a safe and adequate supply of water for all people. As an epidemiologist who has spent my career examining links between environmental quality and health, I urge the members of the ORSANCO council to review options 3 and 4, and to choose the best elements of both, before moving forward to implement regulatory proposals. I appreciate your listening to the people, especially environmental and public health professionals, whose life's work is safeguarding the rights of all to clean water and air. Thank you.

Sincerely,

Colleen Kaelin, MSPH, RS

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

Tressa Rankin

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Rena P

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

To: PCS@orsanco.org
Subject: Pollution Control Standards for the Ohio River
Date: Thursday, August 16, 2018 10:16:50 PM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

Date: Thursday, August 16, 2018 10:33:48 PM

Dear ORSANCO,

I am writing today to tell you that I value the water pollution control standards set by the Ohio River Valley Water and Sanitation Commission (ORSANCO). I am not alone asking for the current pollution control standards be maintained, drinking water authorities and utilities are on my side. They also understand the value of ORSANCO setting uniform standards to protect the drinking water of 5 million people.

According to ORSANCO's minority report, there are 188 parameter criteria which the six signatory states and the US Environmental Protection Agency lack. This is a clear indication that ORSANCO's standards must remain in place to protect our drinking water, recreational opportunity and tourist revenue that the Ohio River brings to our great state.

In 2014, methylcyclohexane methanol, a coal washing chemical leaked into the Elk River and traveled into the Ohio River.

In 2015, an overabundance of phosphorus runoff from agricultural processes, municipal sewage, and septic tanks in the watershed caused a 700-mile-long algae bloom on the river.

At a time when the federal government is eliminating or weakening environmental and public health safeguards it is even more urgent that ORSANCO's pollution control standards remain in place. Considering the importance of ORSANCO's standards to public health and the environment, they should consider reforming the tri-annual review process into a five-year review process in order to reduce cost, not eliminate the standards altogether.

Sincerely,

Rebecca Walton

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Ronald Rutzky

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

AI'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Diana Johnson

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Louis Esposito

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Laura Poskus

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Eugenie Von Poppe

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Max Stein

This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Megan Warren

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Subject: Pollution Control Standards for the Ohio River
Date: Friday, August 17, 2018 2:16:39 AM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.
