4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Brenda Eckberg

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Rick Barber

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Har Spears

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Ralph Alexander

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Sheldon Isaac

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Barbara Kopelman

This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Ruth Braithwaite

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Richard Burkhart

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Maggie D'Arcy

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Joe Wolf

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

TRISH SCHRODER

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

The Ohio River Basin is home to a diverse array of wildlife, like the belted kingfisher, and more than 25 million people who depend on the watershed as a source of drinking water, and a place of recreation. We need to maintain pollution control standards the health of wildlife and the public depend on these safeguards!

As a constituent, I want you to understand my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Kathleen Corby

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Rebecca Cobb

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Catherine Schaffner

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Patti My

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Alan Serlin

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

Everyone lives downstream of some waterway somewhere. The toxic chemicals in your body and mine often come to us in the water we drink.

The proposed changes to the Pollution Control Standards for discharges into the Ohio River would only encourage polluters in other states to ask for the same dispensation. It makes no sense.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Sharon Wesoky

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Nick Hammer

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Ryan Hanson

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Cordale Brown

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Kim Salmi

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

I already feel sorry enough for birds and other animals who have to live in or around the filthy waterways America pats itself on the back for saying "they're much cleaner than they used to be." Like that's something special. Our big rivers are disgusting and the last thing we should do is loosen up the inadequate rules that now govern our polluters.

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Fawn King

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Kristie Lindgren

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Gary Nelson

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Bonnie Farmer

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

The Ohio River does not need any assistance by weakening the pollution control standards for the river that would add to its polluted state and pose even greater harm to the kingfisher and other wildlife and their habitats. I am protesting any proposed changes that would further enable pollution in the river that would in turn, add to the harm that the wildlife currently have to deal with. We should be doing our utmost to help the pristine life that exists in the Ohio River Basin, not degrading any further. It is urgent for the Pollution Control Standards for discharges into the Ohio River be kept in place and the only changes made are ones that upgrade these standards.

Sincerely,

Diane Moss

Aug 16, 2018

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Maryjo Osowski

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the recent proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is simply not acceptable or safe. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the vital importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in our country. In the case of the Ohio River Basin it is beneficial -- and increasingly critical -- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, any reasonable effort at restoration and protection of the health and living resources of the Ohio River Basin clearly requires a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Joel Christine

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Sally Sare

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Craig Todd

Dear ORSANCO via Email,

Though I do not live in your watershed, I believe that each individual, company, private organization and government agency has an obligation to protect the natural resources that are critical to the wellbeing of all of us. On this issue, my responsibility is to share my views with you.

I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Heather Henthorne

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Robert Jehn

Subject: Pollution Control Standards for the Ohio River
Date: Thursday, August 16, 2018 12:47:46 PM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Elisabeth N.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Stephanie Llinas

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Robert W. Rhodes, III

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Corinne Italiano

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Richard Rutherford

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Tracey Mangus

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

steven smith

Aug 16, 2018

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

Since you represent me I urge you to oppose proposed changes to the Pollution Control Standards for discharges into the Ohio River. Our health is at stake.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is wrong. Instead we need to continue to clean up and restore the Ohio River.

Did you know that the Ohio is the most polluted rivers in the country? . Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Alexa Ross

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Debra Bullock

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Katherine Doherty

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Linda Pinto

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Paul Kittelson

Subject: I strongly object to Orsanco turning over responsibility for the Ohio River to the states
Date: Thursday, August 16, 2018 1:25:07 PM

Kentucky will let the whole thing go in the toilet so for the sake of those who live here in KY, PLEASE do not turn over ANY responsibility to the state. Thank you.

Joy Jamison, 5311 Bartonfield Lane, Louisville KY 40219

--

If a language for God is exclusively male and a certain kind of image of what power means, it's certainly an incomplete picture of God. ... We can't define God. We can say something profoundly true about God, but the mystery we dare to call God is always bigger than anything we can imagine.

---Chicago Episcopal Bishop Jeffrey Lee

From: [Steve Malafy](#)
To: PCS@orsanco.org
Subject: Pollution Control Standards for the Ohio River
Date: Thursday, August 16, 2018 1:39:06 PM

Dear ORSANCO Commissioners,

Since 1948 ORSANCO has set pollution control standards for the Ohio River. These standards have helped improve the water quality of the river and provide critical guidance to the eight states within the basin. Please don't walk away from your responsibility to set uniform pollution control standards for the Ohio River.

Please consider the following comments as you determine ORSANCO's future role.

1. There will be protection gaps and inconsistencies. A 2015 survey conducted by ORSANCO comparing state water quality standards to ORSANCO's pollution control standards found a total of 440 pollutants where there are no state water quality standards or ORSANCO's standards are more protective than the states.
2. States will have added burden. States depend on ORSANCO to establish numeric criteria for toxins like copper, cyanide, fluoride, methylmercury, and nitrites. Without ORSANCO's pollution control standards, states would be burdened with the financial responsibility of researching, developing, and establishing numeric criteria for gaps in state standards.
3. Downstream states stand to pay the price. A state-by-state approach to setting water quality standards raises concerns related to interstate conflict. Without uniform standards for the Ohio River, an upriver state could develop weak water quality standards that would lead to pollution related issues for downriver states.
4. It's a step backward in cleaning up the Ohio River. ORSANCO's pollution control standards are set to manage the Ohio River basin as a whole, rather than disjointed river segments. States should be able to count on ORSANCO to set uniform pollution control standards that bring the entire Ohio River closer to meeting the Clean Water Act's key tenants of fishable, swimmable, and drinkable.

Thank you for this opportunity to comment.

This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Kimberley Fisher

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Penny Lambert

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Carol Chowdhry

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Jean Tunstall

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

susan nowicki

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Date: Thursday, August 16, 2018 1:56:54 PM

TO: ORSANCO PCS committee & Commissioners

Friends, I am very much opposed to the proposed changes to the current Pollution Control Standards and feel that the language adopted in 2015 will better serve those in the Ohio River Basin. As I understand your mission, you are to protect and preserve those waters in the basin.

Abdicating to the states your role as protector of these valuable resources is a mistake. ORSANCO standards provide a floor of regulation that states now must meet or exceed. Should ORSANCO abandon its role of protector, the water quality of the Ohio River basin will be left to states who are all too willing to minimize regulations in favor of expediency and special interest. There appears to be no interest in protecting these resources at the state or federal level.

Please do what you know is right for the long term health of the basin and those who live here.

Sincerely,

John Niland

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Jenseen Petersen

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Dianne Noblett

Dear ORSANCO via Email,

As an American, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River basin should be part of a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states, including New York, work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Doug Russell

In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

As a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River.

ORSANCO's proposal to eliminate pollution control standards and withdraw from the process of maintaining and updating the standards moving forward is not acceptable. This approach jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.

Sincerely,

Mary Ann Dalton

ORSANCO ORSANCO via Email

Dear ORSANCO via Email,

Although I'm not a constituent, I'm writing to express my concerns regarding the proposed changes to the Pollution Control Standards for discharges into the Ohio River. This will harm both Ohio's people and its wildlife and environment.

Eliminating pollution control standards jeopardizes the ongoing clean up and restoration of the Ohio River and is counter to the original 1948 compact that outlined the importance of watershed-wide cooperation through a joint or common agency.

The Ohio River is at a critical juncture, again topping the list of most polluted rivers in the country. In the case of the Ohio River Basin it is beneficial-- and increasingly critical-- to advance a shared conservation agenda. Because strategies and decisions must be made across numerous states and across multiple levels of government, restoration and protection of the health and living resources of the Ohio River Basin clearly begs a collaborative approach.

The Commission should continue to uphold its responsibility to protect our waterways, communities, and wildlife and to ensure all states work towards common goals and a cleaner Ohio River.
